Preface

This publication provides technical information about the code pages supplied with IBM font offerings for use with IBM's Advanced Function Presentation (AFP) licensed programs and page printers.

IBM uses code pages to relate computer generated hexadecimal data to character shapes. A code page can be visualized as a 16 by 16 matrix of hexadecimal values, each value corresponding to an addressable unit called a code point. Characters are assigned to code points according to conventions established by country needs and by various standards organizations, including IBM. When a code point is selected, the character associated with that code point is printed or displayed. For more information, see *AFP Fonts: Font Summary*, G544-3810, or *AFP Fonts: Font Summary for AFP Font Collection*, S544-5633.

Code pages described in this publication are provided with several font offerings; however, the vast majority of the code pages presented here (all but six) come with the AFP Font Collection products. Code pages are used by many past and present font offerings including the IBM Expanded Core fonts (provided in AFP Font Collection), IBM Compatibility fonts (provided with the PSF products), IBM 4028 Font Metrics (no longer available), and other IBM font offerings, some of which are no longer available.

For more information on the IBM Expanded Core fonts, see *AFP Fonts: Font Summary for AFP Font Collection*, S544-5633 or *AFP Fonts: Technical Reference for Expanded Core Fonts*, S544-5228.

For more information on other font offerings, see *AFP Fonts: Font Summary*, G544-3810.

This publication should be used by the system programmer or the font administrator when working with IBM code pages. This person should have a background in using AFP applications in the MVS, OS/390, VM, VSE, AIX, OS/2, or OS/400 operating system environments. Knowledge of how fonts are used with IBM's advanced function printers is also helpful.

Contents of This Publication

This publication includes technical information about IBM code pages. It includes the following chapters:

Chapter 1, "IBM Fonts and Their Associated Code Pages" on page 1 contains tables that summarize the code pages used with various language groups and IBM font products.

Chapter 2, "IBM Code Pages and Their Language Groups" on page 17 describes the categories in which IBM code pages are grouped, and includes a table that groups code pages by country.

Chapter 3, "IBM Code Pages and Their Valid Character Sets" on page 27 contains lists of code pages showing the character sets and type families with which they can be used. Also contains a table listing the type families and their associated IBM character sets.

Chapter 4, "IBM Code Pages" on page 55 provides code page maps for each code page showing the code points and character assignments.

Chapter 5, "Character IDs Found on IBM Code Pages" on page 301 lists each graphic character ID, the graphic character, the graphic character name, and the code pages on which you can find it. Use this chapter whenever you need to find a code page to print a particular character.

A glossary of terms and an index are also included.

Related Publications

The following publications contain additional information you may find helpful when working with fonts and AFP software.

General Information

- *AFP Fonts: Font Summary*, G544-3810, and *AFP Fonts: Font Summary for AFP Font Collection*, S544-5633, provide essential information about:

- IBM Expanded Core Fonts
- IBM Compatibility fonts
- IBM 4028 Font Metrics Fonts
- IBM font licensed programs
- IBM code pages

These books are provided with all AFP Font Collection licenses. *AFP Fonts: Font Summary*, G544-3810 was provided with IBM AFP Font Collection 1.1 and *AFP Fonts: Font Summary for AFP Font Collection*, S544-5633 is provided with IBM AFP Font Collection 2.1.

- *ABOUT TYPE: IBM's Typographic Primer for Digitized Type*, G544-3183, describes type and how it benefits communication.
- *AFP Fonts: Introduction to Typography*, G544-3122, presents detailed information about how to select and use type in headings and text.
- *AFP Fonts: Font Samples*, G544-3792, shows samples of fonts used with IBM's AFP programs and page printers.

Font Architecture

Data Stream and Object Architectures: Font Object Content Architecture (FOCA) Reference, S544-3285, describes the architecture of IBM fonts.

IBM Expanded Core Fonts

AFP Fonts: Technical Reference for IBM Expanded Core Fonts S544-5228, contains technical information about the Expanded Core fonts.

IBM Compatibility Fonts and IBM font Licensed Programs

ABOUT TYPE: IBM's Technical Reference for 240-Pel Digitized Type, S544-3516, contains technical information about the IBM 240-pel compatibility fonts and font licensed programs.

Other Font Groups

- *Quick Reference for POSTNET Bar Code Fonts*, G544-3818, describes the bar code and optical character recognition fonts available to accommodate ZIP + 4, program number 5799-DGX, on the MVS, VM, and VSE operating systems.
- *Licensed Program Specifications for AS/400 Advanced Function Printing Fonts*, G544-3773, describes the fonts available as licensed program 5769-FNT for Application System/400 (AS/400). Specific software and hardware requirements are included.
- *Quick Reference for Advanced Function Printing: Compatibility Fonts Available with Operating System/400 Version 2*, G544-3771, describes the uniformly spaced and mixed-pitch fonts available with Operating System/400. Specific software and hardware requirements are included.

Type Transformer

***AFP Fonts: Type Transformer User's Guide*, G544-3796**

AFP Library Publications

AFP library publications contain information specific to AFP and its software.

- *A Guide to IBM's Advanced Function Printing*, G544-3095, describes the benefits of AFP software for printing a variety of documents.
- *Advanced Function Printing: Software General Information*, G544-3415, contains more information about specific AFP software and related publications.

AFP Printers

***Advanced Function Presentation: Printer Information*, G544-3796** provides information about IBM AFP printers and the font data formats they support.

Summary of Changes

This publication has been updated

- To include code page information for code pages supporting the euro currency symbol added to the Latin1 fonts for IBM AFP Font Collection 2.1.
- To include information for new code pages added for AFP Font Collection 2.1.
- To include code page information for Lao fonts included in the Expanded Core fonts provided in IBM AFP Font Collection 2.1.
- To include code page information for Thai fonts included in the Expanded Core fonts provided in IBM AFP Font Collection 2.1.
- To fix Chapter 2 so that the preferred code pages for each country are properly identified.
- To correct information on the code pages that was in error in the previous edition.

Summary of Releases

This publication reflects code pages provided in the following AFP font products.

Note: Code pages in this publication may be (or have been) provided in other products; however, IBM AFP Font Collection is the main source for code pages provided by IBM today.

Figure 1. Summary of Font Releases

Licensed Program	Description	Release Level
5648-113	IBM AFP Font Collection for IBM Operating Systems (contains IBM Expanded Core Fonts, 4028 Font Metrics, IBM Compatibility Fonts)	1.1.0
5648-B33	IBM AFP Font Collection for MVS, VM, and VSE (contains IBM Expanded Core Fonts)	2.1.0
5648-B45	IBM AFP Font Collection for AIX, OS/2, and OS/400 (contains IBM Expanded Core Fonts, IBM Compatibility Fonts)	2.1.0
5799-DGX	Postal Bar Codes	1.2.0
5799-XDZ	MICR Fonts for AFP (RPQ 8A8083)	1.1.0
5688-021	Bar Code and OCR	1.1.1

Chapter 1. IBM Fonts and Their Associated Code Pages

Information Contained in This Chapter	3
IBM Expanded Core Languages and Their Associated Code Pages	4
IBM Compatibility Fonts and Their Associated Code Pages	6
IBM 4028 Font Metrics and Their Associated Code Pages	7
Uniformly Spaced and Mixed-Pitch Fonts	7
Typographic Fonts	11
IBM Font Licensed Programs and Their Associated Code Pages	15

Information Contained in This Chapter

This chapter summarizes fonts and their associated code pages. If you know the font you want to use, tables provided here can help you find a code page that can be used to print it.

- Figure 2 shows the IBM Expanded Core Font languages and their associated code pages. The following shows how these languages are supported by the Expanded Core type families.
 - **APL:** Courier APL
 - **Arabic:** Times New Roman, Helvetica, and Courier
 - **Cyrillic/Greek:** Times New Roman, Helvetica, and Courier
 - **Hebrew:** Times New Roman, Helvetica, and Courier
 - **Katakana:** Gothic Katakana
 - **Lao:** Times New Roman, Helvetica, and Courier
 - **Latin1:** Times New Roman, Helvetica, Courier, Boldface, Gothic Text, Letter Gothic, Prestige, and BookMaster
 - **Latin2-5:** Times New Roman, Helvetica, and Courier
 - **OCR:** OCR-A and OCR-B
 - **Specials:** BookMaster Specials and BookMaster IBM Logo
 - **Symbols:** Times New Roman, Helvetica, Courier, and BookMaster Specials
 - **Thai:** Times New Roman, Helvetica, and Courier
- Figure 3 shows IBM Compatibility fonts and their associated code pages.
- Figure 4 and Figure 5 show IBM 4028 Font Metrics and their associated code pages.
- Figure 6 shows IBM font licensed programs and their associated code pages.

Chapter 3, “IBM Code Pages and Their Valid Character Sets” on page 27 lists all valid character set and code page combinations (those character sets that contain all the characters required by a specific code page), regardless of whether a coded font exists for those combinations. You can create coded fonts by using the information in *AFP Fonts: Technical Reference for IBM Expanded Core Fonts*.

IBM Expanded Core Languages and Their Associated Code Pages

Figure 2 shows the language groups supported by the IBM Expanded Core Fonts and code pages that can be used to print them. If a code page is shown for a language group (for example, Latin4), then all type families supporting that language group (for example, Courier, Helvetica, and Times New Roman) can use the code page. The only exceptions are BookMaster Latin1 fonts which use a different set of code pages than the other Latin1 fonts.

Note: For a list of country-preferred code pages (code pages preferred for use by a particular country), refer to "Code Pages for Specific Countries and Languages" on page 22 and *AFP Fonts: Font Summary for AFP Font Collection*.

Notes: <ol style="list-style-type: none"> 1. y = A, B, D, E, F, I, N, S, and U for variations when referencing Compatibility font NLS code pages. 2. zzz = 037, 273, 274, 275, 277, 278, 280, 281, 282, 284, 285, 297, 500, and 871 for variations when referencing country extended code pages. 3. The code pages shown in bold in this table are ASCII code pages. They cannot be used with DCF because DCF does not support ASCII code pages. These code pages are supported by PSF and can be used to print documents generated by other means. 	

IBM 4028 Font Metrics and Their Associated Code Pages

Note: 4028 Font Metrics are no longer provided by IBM, but they are included in this publication for reference purposes.

IBM 4028 Font Metrics included uniformly spaced, mixed-pitch, and typographic fonts.

- Figure 4 shows code pages for uniformly spaced and mixed pitch 4028 Font Metrics.
- Figure 5 on page 11 shows code pages for typographic 4028 Font Metrics.

The 4028 Font Metrics are the host equivalents of the printer-resident fonts. To print on the IBM LaserPrinter 4028, you need to know if the coded font you are using requires that an IBM LaserPrinter 4028 font card be inserted into the printer. For each coded font, Figure 4 and Figure 5 identify a font card that can be used. The designation "Resident" indicates that the font is internal to the printer and that a font card is not required.

Note: Not all possible font cards are listed. Refer to *Supplies/Options Catalog for the IBM LaserPrinter* for more information about font cards.

Uniformly Spaced and Mixed-Pitch Fonts

Figure 4 shows uniformly spaced and mixed-pitch IBM 4028 Font Metrics type families and code pages that can be used to print them. Coded fonts are not provided for all code-page and character-set combinations.

Typographic Fonts

Figure 5 shows the typographic IBM 4028 Font Metrics type family and code page pairs that can be used in coded fonts. Only those code pages that are paired with at least one IBM 4028 Font Metrics character set when they are shipped are shown. Coded fonts are not provided for all code page and character set combinations.

Notes:	
<p>1. Although the following data processing code pages are shipped with the Sonoran Sans Serif and Sonoran Serif licensed programs, the code pages contain characters not found in the licensed program character sets. The data processing code pages are T1GDP037, T1GDP256, T1GDP273, T1GDP274, T1GDP275, T1GDP276, T1GDP277, T1GDP278, T1GDP279, T1GDP280, T1GDP281, T1GDP282, T1GDP283, T1GDP284, and T1GDP285.</p> <p>To use the data processing code pages, you need to copy the missing characters from the Pi Serif or Pi Sans Serif character sets found in the Pi and Specials font licensed program into the Sonoran Sans Serif or Sonoran Serif character set you want to use. Instructions are included in <i>ABOUT TYPE: IBM's Guide for Using Print Management Facility with Type</i> for using PMF to make these character set modifications.</p>	
<p>2. xxx = 361, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, and 395 for national language variations when referencing general purpose code pages.</p>	
<p>3. zzz = 037, 273, 274, 275, 277, 278, 280, 281, 282, 284, 285, 297, 500, and 871 for national language variations when referencing the Country Extended Code Pages.</p>	

Chapter 2. IBM Code Pages and Their Language Groups

Information Contained in This Chapter	19
Preferred Code Pages	19
Code Page Selection by Language Complement	20
Other EBCDIC Code Pages	21
ASCII Code Pages	21
Code Pages for Specific Countries and Languages	22

Information Contained in This Chapter

Often it is necessary to select a code page to print text for a particular country. This chapter explains how code pages can be identified by country or by language. The concept of 'language complement' is explained and all supported countries and languages are identified along with code pages that can be used for printing.

Preferred Code Pages

For many countries there are several code pages that, over time, have become more or less standard code pages. These are the preferred code pages and are a good place to start when determining which code pages to use.

Preferred code pages are all EBCDIC and are of four types:

- Country Extended Code Pages (CECP)
- Euro Country Extended Code Pages (ECECP)
- BookMaster
- Country Specific

Country Extended Code Pages are a collection of 14 Latin1 code pages each containing the same characters, but with code point assignments arranged so that the characters are located according to the requirements of individual countries. In other words, the same characters are supported by all 14 code pages, but the locations of the characters varies by code page. These are the most widely-used code pages among countries with Latin-based languages.

Country Extended Code Pages are named T1V10zzz where zzz = 037, 273, 274, 275, 277, 278, 280, 282, 284, 285, 297, 500, and 871. T1B00zzz are the Country Extended Code Pages used with BookMaster.

Euro Country Extended Code Pages are a subset of the Country Extended Code Pages and provide support for the euro currency symbol that was added to all Latin1 fonts for AFP Font Collection 2.1. The Country Extended Code Pages were the logical choices for euro implementation; however, the code pages had no vacant code points available. To address this problem, new Euro Country Extended Code Pages were created based on 10 of the existing Country Extended Code Pages. The 'international currency symbol', SC010000, was removed from these code pages and replaced by the euro sign. Euro Country Extended Code Pages are named T100114n where n = 0–9.

Euro Country Extended Code Pages and their Country Extended counterparts are listed below.

- ECECP T1001140 based on CECP T1V10037
- ECECP T1001141 based on CECP T1V10273
- ECECP T1001142 based on CECP T1V10277
- ECECP T1001143 based on CECP T1V10278
- ECECP T1001144 based on CECP T1V10280
- ECECP T1001145 based on CECP T1V10284
- ECECP T1001146 based on CECP T1V10285
- ECECP T1001147 based on CECP T1V10297
- ECECP T1001148 based on CECP T1V10500

- ECECP T1001149 based on CECF T1V10871

BookMaster fonts and code pages have also had the euro sign added for AFP Font Collection 2.1. Unlike the CECFs, however, it was not necessary to create new code pages because an unassigned code point, X'34', was already available.

Country Specific code pages are all other code pages that provide country support.

Code Page Selection by Language Complement

The term 'language complement' was coined many years ago when the Core Interchange fonts were first introduced. It is used to identify groups of countries that can be supported by a single font. For example, the Latin1 language complement implies that text for any country identified as a Latin1 country can be printed with any Latin1 font. Chapter 3 shows the fonts associated with the language complements.

The following identifies the countries that are supported by each language complement.

- The **Arabic** language complement contains characters for Latin and Arabic scripts.
- The **Cyrillic/Greek** language complement contains characters for Bulgarian, Byelorussian, Macedonian, Russian, Serbian, Ukrainian, English, and Greek scripts.
- The **Hebrew** language complement contains characters for Latin and Hebrew scripts.
- The **Latin1** language complement contains characters for the following languages: Danish, Dutch, English, Faeroese, Finnish, French, German, Icelandic, Irish, Italian, Norwegian, Portuguese, Spanish, and Swedish.
- The **Latin235** language complement contains characters for the following languages:
 - **Latin2:** Albanian, Czech, English, German, Hungarian, Polish, Romanian, Serbocroatian, Slovak, and Slovenian.
 - **Latin3:** Afrikaans, Catalan, Dutch, English, Esperanto, French, German, Italian, Maltese, Spanish, and Turkish.
 - **Latin5:** Danish, Dutch, English, Finnish, French, Irish, Italian, Norwegian, Portuguese, Spanish, Swedish, and Turkish.
- The **Latin4** language complement contains characters for the following languages: Danish, English, Estonian, Finnish, French, German, Greenlandic, Lappish, Latvian, Lithuanian, and Norwegian.
- The **Thai** language complement contains characters for Latin and Thai scripts.
- The **Lao** language complement contains characters for Latin and Lao scripts.
- The **Katakana** language complement contains phonetic syllabic characters used for writing non-Japanese words and for emphasis in Japanese text.
- The **APL2** language complement contains characters used in the APL and APL2 programming languages.
- The **Symbols** language complement contains math and other special symbols.
- The **OCR** language complements contain characters that support the OCR-A and OCR-B optical character recognition symbologies.

Other EBCDIC Code Pages

In addition to the Preferred Code Pages, other EBCDIC code pages are sometimes available. Generally, these are code pages that were associated with some of the old font licensed programs. In most cases, they are simply alternatives to the preferred code pages.

ASCII Code Pages

ASCII code pages are provided for cases where AFP documents must be printed in an ASCII environment.

Code Pages for Specific Countries and Languages

Figure 7 helps you choose a code page for a particular country or language.

Notes: <ol style="list-style-type: none"> 1. T1DxBASE code pages provide minimal National Language Support for Compatibility fonts, but they are still useful for some applications and can be used with Latin1 fonts. Languages supported are as follows: <ul style="list-style-type: none"> • T1D0BASE DCF REL 2 COMPATIBILITY (all are based on this code page) • T1DABASE Austria/Germany F.R. • T1DDBASE Belgium/Swiss/Luxembourg • T1DDBASE Denmark/Norway/Iceland • T1DEBASE Finland/Sweden • T1DFBASE France • T1DIBASE Italy • T1DNBASE Netherlands/Portugal • T1DSBASE Spain • T1DUBASE United Kingdom 				

Chapter 3. IBM Code Pages and Their Valid Character Sets

Figure 9 on page 30 lists the IBM-supplied code pages and shows the valid character sets that can be used with each code page. All code pages in this book are provided with IBM AFP Font Collection products **except** the following 6 code pages:

- T1001132 and T1001133 come with MICR Fonts for AFP, 5799-XDZ.
- T1001300 comes with Bar Code and OCR, 5688-021.
- T1001301, T1001302, and T1001303 come with Postal Bar Code, 5799-DGX.

Valid means that each character assigned in the code page is available in the character set.

Character sets in this chapter are identified in two ways: by category and by individual character set.

Character Set Categories: When a category is identified, you can use all character sets in that category. This includes all typefaces and point sizes. For example, the category LATIN1 includes all Latin1 character sets for Times New Roman, Helvetica, Courier, Boldface, Gothic Text, Letter Gothic, and Prestige in a wide variety of typeface and point size combinations.

Figure 8 shows the character set categories.

Figure 8 (Page 1 of 2). Character Set Categories

Category	Includes	Font Group
LATIN1 (euro added in AFP Font Collection 2.1)	Times New Roman Helvetica Courier Boldface Gothic Text Letter Gothic Prestige	IBM Expanded Core Fonts
LATIN235	Times New Roman Helvetica Courier	IBM Expanded Core Fonts
LATIN4	Times New Roman Helvetica Courier	IBM Expanded Core Fonts
ARABIC	Times New Roman Helvetica Courier	IBM Expanded Core Fonts
HEBREW	Times New Roman Helvetica Courier	IBM Expanded Core Fonts
CYRGRK	Times New Roman Helvetica Courier	IBM Expanded Core Fonts
SYMBOLS	Times New Roman Helvetica Courier	IBM Expanded Core Fonts
KATAKANA	Gothic Katakana	IBM Expanded Core Fonts
APL2	APL2	IBM Expanded Core Fonts

Figure 8 (Page 2 of 2). Character Set Categories

Category	Includes	Font Group
OCRA	OCR-A	IBM Expanded Core Fonts
OCRB	OCR-B	IBM Expanded Core Fonts
BOOKLAT1	BookMaster Latin1	IBM Expanded Core Fonts
BOOKSPEC	BookMaster Specials	IBM Expanded Core Fonts
IBMLOGO	IBM Logo (part of BookMaster fonts)	IBM Expanded Core Fonts
THAI	Times New Roman Helvetica Courier	IBM Expanded Core Fonts
LAO	Times New Roman Helvetica Courier	IBM Expanded Core Fonts
SONORAN	Sonoran Serif Sonoran Sans Serif Sonoran Sans Serif Condensed Sonoran Sans Serif Expanded Sonoran Serif Headliner Sonoran Sans Serif Headliner	Licensed products
LICENSED	ITC Avant Garde Gothic Monotype Garamond Century Schoolbook ITC Souvenir	Licensed products
MATHFMT	Math Format	Licensed products
MATHSER	Math Symbols Serif	Licensed products
MATHSSER	Math Symbols Sans Serif	Licensed products
PROPRNTR	Proprinter Emulation	Compatibility

Individually Identified Character Sets: Names other than category names in the second column of Figure 9 on page 30 are the names of individual character sets. These character sets come from the following sources:

- IBM Compatibility Fonts
- Pi and Specials licensed product
- Data1 licensed product
- APL2 licensed product
- Bar Code and OCR licensed product
- MICR Font RPQ
- 4028 Font Metrics

Notes:

1. Figure 9 on page 30 lists the combinations of character sets and code pages that IBM has tried and found valid, but it is not an exhaustive list. You may find other combinations that work.
2. Character sets that begin with "COE" are associated with the 4028 Font Metrics.

In Print Services Facility (PSF)/MVS and PSF/VSE, the APSRMARK utility identifies 4028 resident font resources to the host. These font resources include character sets and code pages. Figure 9 includes all code pages for

which 4028 Font Metrics are valid. If you use a code page for formatting text at the host, you must ensure that the code page is marked for PSF/MVS or PSF/VSE before trying to print text on the IBM LaserPrinter 4028. For more information, refer to *ABOUT TYPE: IBM's Technical Reference for 4028 Font Metrics*.

Notes:

1. This BookMaster code page has the euro sign at code point x'34' and can be used with BookMaster Latin1 character sets provided with AFP Font Collection 2.1 or later.
2. T1001003 is used with the LATIN1 typographic fonts.
3. T1001068 is used with the LATIN1 monospaced fonts.
4. The euro sign is supported in LATIN1 fonts provided with AFP Font Collection 2.1 or later.
5. This code page is new with AFP Font Collection 2.1.
6. To use this code page, create character sets with Type Transformer using the Latin outline fonts and the Baltic character list. Type Transformer is provided with 5648-B45, feature 6208.
7. To use this code page, create character sets with Type Transformer using the Gothic Katakana outline fonts and do not use a character filter. Type Transformer is provided with 5648-B45, feature 6208.

Information Contained in This Chapter

A code page provides the link between a computer generated code and a character in a font. There are 256 code points in a code page into which character identifiers are stored. When a code point is selected, the character identifier assigned to that code point is used to locate the character shape data in the font character set.

The arrangement of characters on a code page is determined by country requirements and by registered standards.

This chapter contains information about how to read a code page map, some special notes about code pages, and code pages for the IBM font products.

How to Read a Code Page Map

Each code page map includes detailed information and Figure 10 shows how this information is arranged. Definitions of the terms in Figure 10 follow the figure.

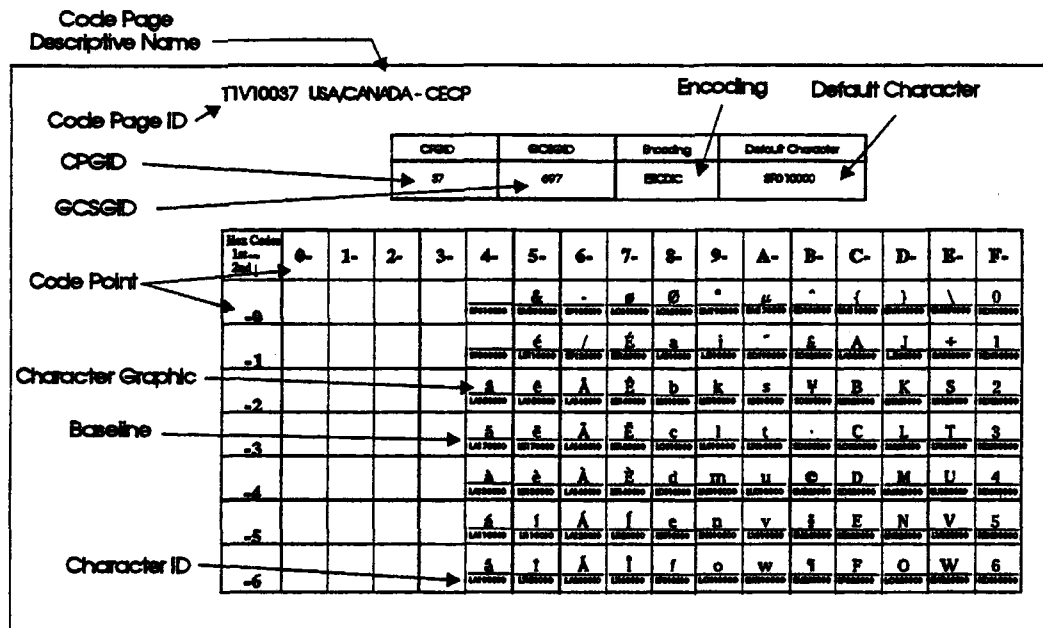

Figure 10. Example of an IBM Code Page

Code Page Descriptive Name

The code page descriptive name describes the most common use of the code page. For example, code page T1V10037 (Figure 10) contains the characters needed to print information in English. It also includes special characters, such as monetary symbols, used in Canada.

Code Page ID

The code page ID is the AFP identifier by which the code page is referenced.

CPGID

The CPGID is the code page global ID. It is a unique value that identifies a specific set of code points assigned to a specific list of graphic character IDs.

GCSGID

The GCSGID is the graphic character set global ID. It is a unique value that identifies the list of graphic character IDs included in the code page.

Encoding	Most IBM code pages use EBCDIC code points; but some use ASCII. Code pages that use ASCII code points cannot be processed by Document Composition Facility (DCF) because DCF does not support ASCII code pages. ASCII code pages, however, allow printing of ASCII data streams that have been formatted by other means.
Default Character	<p>When the printer receives a code point that does not have a character assigned to it, and data checks are prevented in either of these ways:</p> <ul style="list-style-type: none"> • The printer data check is blocked (you specified DATAACK = BLOCK to PSF, or BLKCHAR in job control) • The code page specifies DATA CHECK = NO, <p>the default character is printed. If the data check is not blocked and the code page you are using specifies DATA CHECK = YES, the printer issues a data check. Code pages received from IBM normally specify DATA CHECK = YES.</p> <p>When DATA CHECK = YES, some printers perform extensive recovery for invalid characters even if data checks are blocked to PSF, at great cost to performance. You can improve performance by using the Type Transformer code page editor to set DATA CHECK = NO, but you will not be warned about undefined code points. You will not know that the characters you expect were not printed until you proofread the printout.</p> <p>All the code pages in this book specify a blank (character ID SP010000) as the default character for undefined code points.</p> <p>For information about editing code pages, see <i>AFP Fonts: Type Transformer User's Guide</i>.</p>
Code Point	A 1-byte code is assigned to each character in the code page. The code points are represented as hexadecimal values; for example, hexadecimal 50 is equivalent to decimal 80. The numeral or letter above the character in the matrix is the first hexadecimal digit of the code point. The numeral or letter to the left of the character is the second hexadecimal digit. In Figure 10 on page 61, for example, character ID SM030000 (&) is assigned to hexadecimal code point 50.
Character Graphic	Each character that appears on the code page is associated with its character ID.
Character ID	The character ID is the standard identifier for a character regardless of its type family. For example, all uppercase A's have the same character ID (LA020000). Character IDs are also called graphic character identifiers or graphic character IDs.
Baseline	The baseline shows where the character is aligned in a line of text.

Changing Code Pages

It is possible to add, delete, and change code point assignments for characters. One technique is to use the code page editor provided with Type Transformer. For instructions, see *AFP Fonts: Type Transformer User's Guide*.

Identifying Similar Code Pages

Two code pages may appear to be identical; however, they are not identical unless both the code page global identifier (CPGID) and graphic character set global identifier (GCSGID) on both code pages are the same. Figure 10 shows where the CPGID and GCSGID are located on IBM code pages. Figure 11 shows two similar code pages.

Figure 11. Example of Two Similar IBM Code Pages

Notice that code pages T1D0BASE and T1001002 are similar but not identical. Code page T1D0BASE has a CPGID of 2063 and no GCSGID. Code page T1D0BASE has braces assigned to two sets of code points:

- X'8B' and X'9B'
- X'C0' and X'D0'

Code page T1001002 has a CPGID of 1002 and a GCSGID of 1132. Code page T1001002 has braces assigned to only one set of code points: X'8B' and X'9B'.

In addition, the three variable space characters that were used by DCF (SP010001, SP010002, and SP010003) are available on code page T1D0BASE but not on code page T1001002.

Code Pages

The code pages in this chapter are arranged by code page ID according to the standard EBCDIC collating sequence: A to Z, then 0 to 9.

Chapter 5. Character IDs Found on IBM Code Pages

IBM Graphic Character Identifier Order and Prefixes	303
Alphabetic and Phonetic Character Identifiers	305
Arabic Alphabets (A)	305
Thai Alphabets (B)	311
Greek Alphabets (G)	316
Hebrew Alphabets (H)	322
Katakana Phonetics (J)	324
Cyrillic Alphabets (K)	328
Latin Alphabets (L)	335
Lao Alphabets (U)	374
Bar Code Identifiers	378
Zip + 4 POSTNET Bar Code (DD)	378
Bar Code Specials (DS)	378
Numeric Character Identifiers	382
Decimal Numerics (ND)	382
Fraction Numerics (NF)	391
Special Character Identifiers	392
Arithmetic Specials (SA)	392
Currency Specials (SC)	400
Diacritic Specials (SD)	402
Control Representation Specials (SE)	405
Format Specials (SF)	405
Graphic Specials (SG)	411
APL Specials (SL)	413
Miscellaneous Specials (SM)	419
OCR and MICR Characters (SO)	432
Punctuation Specials (SP)	433
Supplementary Specials (SS, SV)	441

Every character has a unique identifier. Once you understand the naming conventions used for character IDs (graphic character identifiers), you can recognize the characters included in code pages and character sets.

This chapter lists the character IDs and the code pages on which you can find them. Once you know which code pages contain the characters you need, you can go to Chapter 3 to see which fonts contain them.

Occasionally, characters are provided in font data that are not directly associated with a code page. You can use the code page editor supplied with Type Transformer in AFP Font Collection to add these characters to a code page. For information about editing code pages, see *AFP Fonts: Type Transformer User's Guide*.

IBM Graphic Character Identifier Order and Prefixes

The graphic character IDs are listed in order according to the standard EBCDIC collating sequence, that is, A–Z, then 0–9. This order does not correspond to the actual alphabetical order for some languages.

Figure 12 identifies the order in which categories of graphic character IDs are presented and the meaning of the prefix in each graphic character ID.

Figure 12 (Page 1 of 2). Categories and Prefixes for IBM Graphic Character Identifiers

General Category	Descriptive Name	Prefix	Description
Alphabetics and Phonetics	Arabic	A (See note 1 on page 304)	Letters for the Arabic alphabet. The second character generally correlates to the Latin alphabet, for example, AA for Arabic A.
	Thai	B	Letters for the Thai alphabet. The second character generally correlates to the Latin alphabet, for example, BA for Thai A.
	Lao	U	Letters for the Lao alphabet.
	Greek	G (See note 2 on page 304)	Uppercase and lowercase letters for the Greek alphabet. The second character generally correlates to the Latin alphabet, for example, GA for uppercase or lowercase Greek A.
	Hebrew	H	Letters for the Hebrew alphabet. The second character generally correlates to the Latin alphabet, for example, HX for Hebrew X.
	Katakana	J	Japanese phonetics, such as 7 (HU, JH300000), 3 (KO, JK500000), and ㄨ (NU, JN300000).
	Cyrillic	K (See note 2 on page 304)	Uppercase and lowercase letters for the Cyrillic languages. The second character generally correlates to the Latin alphabet, for example, KA for uppercase or lowercase Cyrillic A.
	Latin	L (See note 2 on page 304)	Uppercase and lowercase letters for the Romance languages. The second character indicates the unaccented letter of the alphabet, for example, LA for uppercase or lowercase Latin A.
Numerics	Decimal	ND	Numerals 0–9, superscript (¹), and subscript (₁).
	Fractional	NF	Fractions, such as ½ and ¼.

Figure 12 (Page 2 of 2). Categories and Prefixes for IBM Graphic Character Identifiers

General Category	Descriptive Name	Prefix	Description
Specials	Bar Code	DD, DS	Bar code characters.
	Arithmetic	SA	Arithmetic characters, such as – (minus), = (equals), and ÷ (divide).
	Currency	SC	Monetary symbols, such as \$ (dollar) and £ (pound sterling).
	Diacritic	SD	Characters used with the English alphabet to produce diacritic characters, such as ´ (acute) and ` (grave) accent marks.
	Control Representation	SE	Symbols used to represent control key on a keyboard.
	Format	SF	Characters for special formatting functions, such as ␣ (upper left box corner), ⊕ (box intersection), and █ (solid fill character, left half).
	Graphic	SG	Graphic symbols, such as { (left brace) and } (right brace).
	APL	SL	Characters for the APL programming language, such as ∇.
	Miscellaneous	SM	Characters that do not belong in another category, such as [] (brackets), † (dagger), and ¶ (paragraph).
	OCR and MICR	SO	Symbols used in OCR and MICR, such as ¢ (hook), ¤ (fork), and ¢ (chair).
	Punctuation	SP	Punctuation characters, such as ! (exclamation point) and ¿ (inverted question mark).
	Supplementary	SS, SV	Unusual symbols, such as ♥ (heart), and atypical mathematical symbols, such as ∫ (integral symbol, top half) and ∫ (integral symbol, bottom half).

Notes:

1. For Arabic alphabetics, the final numeral of the IBM name indicates the form:

- 0 Isolated or isolated-final
- 1 Isolated-final
- 2 Final
- 3 Initial or initial-middle
- 4 Middle
- 6 Final after Lam or isolated-final complete

2. For Latin, Greek, and Cyrillic alphabetics, the fourth character of the IBM name (the second numeral after the prefix) indicates the case of the letter:

- Odd Lowercase
- Even Uppercase

Glossary

This glossary includes definitions from the following sources:

- Definitions reprinted from the *American National Dictionary for Information Processing Systems* are identified by the symbol (A) following the definition.
Definitions reprinted from a published section of the International Organization for Standardization's *Vocabulary—Information Processing* or from a published section of the ISO *Vocabulary—Office Machines* are identified by the symbol (I) following the definition. Because many ISO definitions are also reproduced in the *American National Dictionary for Information Processing Systems*, ISO definitions may also be identified by the symbol (A).
- Definitions reprinted from working documents, draft proposals, or draft international standards of ISO Technical Committee 97, Subcommittee 1 (Vocabulary) are identified by the symbol (T) following the definition, indicating that final agreement has not yet been reached among its participating members.
- Definitions that are specific to IBM products are so labeled, for example, "In SNA," or "In VM."

References

The following cross references are used in this glossary:

Contrast with. This refers to a term that has an opposed or substantively different meaning.

Synonym for. This indicates that the term has the same meaning as a preferred term, which is defined in its proper place in the dictionary.

Synonymous with. This is a backward reference from a defined term to all other terms that have the same meaning.

See. This refers the reader to multiple-word terms that have the same last word.

See also. This refers the reader to terms that have a related, but not synonymous, meaning.

A

Advanced Function Printing (AFP). The ability of programs to print all-points-addressable text and images.

Advanced Function Printing data stream (AFPDS). The printer data stream used for printing Advanced

Function Printing data. The AFPDS includes composed text, page segments, electronic overlays, form definitions, and fonts that are downloaded from the operating system to the printer.

AFM. Type 1 font files that contain font metrics (character width and kerning information). Contrast with PFA and PFB.

AFP. Advanced Function Printing.

AFPDS. Advanced Function Printing data stream.

all points addressable (APA). (1) In computer graphics, pertaining to the ability to address and display or not display each picture element (pel) on a display surface. (2) See also picture element.

alphabetic character. (1) A letter or other symbol, excluding numerals, used in a language. (2) Any one of the letters A through Z (uppercase and lowercase). Some licensed programs include as alphabetic characters the special characters #, \$, and @.

alphameric. Synonym for alphanumeric.

alphanumeric. Pertaining to a character set that contains letters, numerals, and usually other characters, such as punctuation marks. (T)
Synonymous with alphameric.

American National Standards Institute (ANSI). An organization, consisting of producers, consumers, and general interest groups, that establishes the procedures by which accredited organizations create and maintain voluntary industry standards in the United States. (A)

ANSI. American National Standards Institute.

APA. All points addressable.

ascender. (1) In a font, the distance from the baseline to the top of the character box. This value can differ for different characters of a given font. (2) Contrast with descender.

ASCII (American National Standard Code for Information Interchange). The standard code, using a coded character set consisting of 7-bit coded characters (8-bits including parity check), that is used for information interchange among data processing systems, data communication systems, and associated equipment. The ASCII set consists of control characters and graphic characters. (A)

A-space. The area in the character box to the left of the first picture element (pel) of the graphic character raster pattern. See also B-space and C-space.

attribute. (1) A named property of an entity. (2) A property of a character set, for example, weight, width, or style. (3) See also character attribute.

B

bar code. A code representing characters by sets of parallel bars of varying thickness and separation, that are read optically by transverse scanning. (1)

baseline. (1) The primary horizontal reference line for character alignment and measurement of vertical distances. (T) (2) In a font, the imaginary line on which the bottom of each successive character is aligned.

baseline direction. (1) The direction in which successive lines of text are added. (2) Synonymous with print direction.

baseline offset. Synonym for ascender.

baseline position. The location down from the top of the logical page (the uppermost point that can be printed on the page) at which the first line of text should start. The baseline position varies from character to character. The values given in this publication are the maximum baseline offset values found in the 0° Font Orientation (FNO) structured field.

bit map. A coded representation in which each bit, or group of bits, represents or corresponds to an item. For example, a configuration of bits in main storage in which each bit indicates whether a peripheral device or storage block is available or in which each group of bits corresponds to one pixel of a display image.

bold. (1) Any typeface characterized by wide strokes. (2) See also semibold. (3) Contrast with light.

boldface. (1) A heavy-faced type. (2) Printing in heavy-faced type.

bounded-box format. (1) An organization of character graphics and information used by Advanced Function Printing programs for printing on printers such as the IBM 3900 Advanced Function Printer or IBM LaserPrinter 4028. Character boxes containing each character graphic do not require character positioning information in the form of white space in the character boxes. In addition, a single character set can be used for all combinations of character rotation and text orientation. Fonts in bounded-box format usually require less storage than fonts in unbounded-box format. (2) See also unbounded-box format.

bounded-box relative metrics. (1) Units of measurement that are expressed in 1000 units per Em-square. (2) See also relative metrics.

B-space. The area in the character box that has a pel defined for any row of the graphic character pattern. See also A-space and C-space.

byte. (1) A binary character operated upon as a unit and usually shorter than a computer word. (A) (2) A string that consists of a particular number of bits, usually 8, that is treated as a unit, and that represents a character.

C

caps. (1) Capital letters, an uppercase font. (2) A printing style that uses two type sizes of a single uppercase font. The smaller size is used instead of a lowercase font. See also small caps.

character. (1) A member of a set of elements that is used for the representation, organization, or control of data. (T) (2) A letter, numeral, or other symbol that is used as part of the organization, control, or representation of data. A character is often in the form of a spatial arrangement of adjacent or connected strokes. (A)

character attribute. (1) In the 3270 data stream, a code that defines a single property of a character or characters, for example, extended color, character set, or extended highlighting. A character can have more than one defined character attribute. (2) See also attribute.

character baseline. An imaginary line on which characters are aligned in the text formatting process.

character box. (1) An imaginary parallelogram on a display surface that contains all parts of one graphic character. (T) (2) The maximum area in which a symbol and all associated elements, such as a cursor, an underline, or space surrounding the symbol to separate it from other symbols, can be printed or displayed.

character graphic. The visual representation of a character, defined by toned or untoned picture elements (pels). An untoned pel (a reverse character) is visually represented by the toned pels around it.

character ID. Character identifier.

character identifier. (1) A symbol that represents a character. (2) The identifier that represents a character, regardless of its style, for example, all uppercase A's have the same character ID. (3) Synonymous with graphic character identifier.

character increment. (1) The distance the current print position is increased for the particular character printed. (2) Synonymous with character spacing.

character list. Synonym for complement.

character metrics. (1) Measurement information that defines individual character values such as height, width, and space. Character metrics can be expressed in specific fixed units, such as pels, or in relative units that are independent of both the resolution and size of the font. Metrics are often included as part of the more general term font metrics. (2) See also font metrics.

character properties. Details about how a character is printed relative to the other characters around it. Character properties are box size, horizontal and vertical character size, character ID, center line, baseline, left space (A-space), right space (C-space), above space, and below space.

character raster pattern. The scan patterns for a graphic character of a particular size, weight, and style.

character rotation. In printing, the alignment of a character with respect to the baseline, measured in degrees in a clockwise direction. Examples are 0°, 90°, 180°, and 270°. Zero-degree character rotation exists when a character is in its customary alignment with the baseline.

character set. (1) A finite set of different characters that is complete for a given purpose, for example, the character set in ISO Standard 646, "7-Bit Coded Character Set for Information Processing Interchange." (T) (2) A group of characters used for a specific reason, for example, the set of characters a printer can print. (3) Often a synonym for font character set. (4) See also coded font.

character spacing. Synonym for character increment.

coded font. (1) A font library member that associates a code page and a font character set. (2) See also character set, code page, and font character set.

code page. (1) A font library member that associates code points and character identifiers. A code page also identifies invalid code points. (2) See also coded font.

code page global identifier (CPGID). (1) A 5-digit registered identifier used to specify a particular assignment of code points to graphic characters. (2) See also graphic character set global identifier.

code point. A 1-byte code representing one of 256 potential characters.

Compatibility Font. Synonym for IBM-Supplied Compatibility Font.

complement. (1) A collection of graphic character identifiers. For IBM Expanded Core Fonts, complements are language-oriented. For example, the Cyrillic Greek complement contains Cyrillic,

Greek, and Latin alphabetic characters.

(2) Synonymous with character list.

condensed type. A typeface in which all characters are narrowed, making them appear taller. Contrast with expanded type.

copyfitting. The process of deciding how much space handwritten or typed copy will occupy when using proportionally spaced type.

country extended code page. An 8-bit code page that has a 93-character set on its nationally standardized code points but is extended to the multilingual character set for the national languages of some European countries.

CPGID. Code page global identifier.

C-space. The area in the character box to the right of the rightmost picture element for the graphic character pattern. See also A-space and B-space.

cursive. (1) Letters created to imitate handwriting. (2) Synonym for script.

custom font. A font designed or modified by a customer.

cylinder. (1) In an assembly of magnetic disks, the set of all tracks that can be accessed by all the magnetic heads of a comb in a given position. (2) The tracks of a disk storage device that can be accessed without repositioning the access mechanism.

D

DASD. Direct access storage device.

DCF. Document Composition Facility.

default. Pertaining to an attribute, value, or option that is assumed when none is specified. (I)

descender. (1) In a font, the distance from the baseline to the bottom of the character box. This value can differ for different characters of a given font. (2) Contrast with ascender.

diacritic. A mark added to a letter to indicate a special phonetic value.

direct access storage device (DASD). A device in which access time is effectively independent of the location of the data.

document. (1) A named, structural unit of text that can be stored, retrieved, and exchanged among systems and users as a separate unit. (T) (2) Information and the medium on which it is recorded that can be read by humans or by machine. (3) In word processing, synonymous with file.

Document Composition Facility (DCF). A licensed program that provides text formatting for a number of IBM printers.

E

EBCDIC. Extended binary-coded decimal interchange code. A coded character set consisting of 8-bit coded characters. (A)

em. In printing, a unit of measure equal to the side of a square formed by the font point size. In relative metrics, the em is always 1000 relative units for medium-width fonts and is scaled up or down for expanded and condensed fonts.

em space. See em.

en. In printing, a unit of measure equal to one-half the width of an em. For many typefaces, lowercase characters tend to average the width of an en.

environment. Selections of typefaces, point sizes, and other information made before **Start job** from the **Transform** pull-down is selected. Environments can be saved to a file and retrieved later.

escapement. (1) Movement of one character space between the paper carrier and typing or printing position, parallel with the typing or printing line. (2) The unit of vertical or horizontal movement that is built into a device, for example, the 1403 printer with a 10-pitch train has a horizontal escapement unit of 1/10th inch.

Expanded Core Font. Synonym for IBM Expanded Core Font.

expanded type. A typeface in which all characters are widened. Contrast with condensed type.

F

FGID. Font global identifier.

figure space. (1) A unit of measure equal to the width of the en space in a particular font. (2) In Document Composition Facility, the width of the figure zero (0).

file. (1) A named set of records stored or processed as a unit. (T) (2) A generic term for the object type that refers to a database file, device file, or set of related records treated as a unit. (3) In word processing, synonym for document.

fixed metrics. (1) Measurement information in specific units, such as pels, inches, or centimeters, for

individual or collections of graphic characters.

(2) See also font metrics. (3) Contrast with relative metrics.

fixed-space font. Synonym for uniformly spaced font.

flat file. (1) A one-dimensional or two-dimensional array: a list or table of items. (2) A file that has no hierarchical structure.

fold. To translate the lowercase characters of a character string into uppercase.

font. A family of characters of a given size and style, for example, 9-point Helvetica. (T) See font character set. See also type font.

font administrator. System programmer responsible for installing and modifying fonts.

font card. Synonym for IBM LaserPrinter 4028 font card.

font character set. (1) A font file that contains the raster patterns, identifiers, and descriptions of characters. (2) Often synonymous with character set. (3) See also coded font.

font component. One of the three basic parts that make up an IBM font: a character set, a coded font, or a code page.

font global identifier (FGID). (1) A number that identifies the character style and size for certain printers. (2) The unique value that identifies the type family, typeface, and, sometimes, the point size of the character set.

font index. The mapping of a descriptive font name to a font member name in a font library. An example of a font member in a font library is a font component. Examples of attributes used to form a descriptive font name are type family name, point size, weight, and width.

font licensed program. Synonym for IBM font licensed program.

font metrics. (1) Measurement information that defines individual character values, such as height, width, and space, as well as overall font values, such as averages and maximums. Font metrics can be expressed in specified fixed units, such as pels, or in relative units that are independent of both the resolution and size of the font. (2) See also character metrics, fixed metrics, and relative metrics.

form. The paper on which output data is printed by a line printer or character printer.

G

GCGID. Graphic Character global identifier.

GCSGID. Graphic character set global identifier.

global resource identifier (GRID). An 8-byte identifier used to identify an external name of a font. A GRID contains the following fields in the order shown:

1. GCSGID (graphic character set global identifier)
2. CPGID (code page global identifier)
3. FGID (font global identifier)
4. font width (width of the space character in 1/1440-inch units).

glyph. An image, usually of a character, in a font.

graphic character. A visual representation of a character, other than a control character, that is usually produced by writing, printing, or displaying. (T)

graphic character identifier. Synonym for character identifier.

graphic character set global identifier (GCSGID).

- (1) The unique value that identifies the list of graphic character identifiers included in the component.
- (2) See also code page global identifier.

GRID. Global resource identifier.

group. (1) A set of related records that have the same value for a particular field in all records. (2) A series of record logically joined together.

H

hardware. All or part of the physical components of an information processing system, such as computers or peripheral devices. (T) Contrast with software.

hexadecimal. Pertaining to a numbering system with the base of 16; valid numbers include the numerals 0 through 9 and characters A through F, where A represents 10 and F represents 15. For example, hexadecimal 1B equals decimal 27.

I

IBM Advanced Function Printing Fonts/400. The IBM licensed program that provides a set of fonts for the AS/400 host to use with many IBM printers and Advanced Function Printing support.

IBM Compatibility Font. Synonym for IBM-Supplied Compatibility Font.

IBM Expanded Core Font. A category of fonts supplied as part of AFP Font Collection. Examples of

IBM Expanded Core Fonts include Latin1: Helvetica, Latin235: Times New Roman, and Thai: Monthob. Synonymous with Expanded Core Font.

IBM font licensed program. (1) A set of font components sold as a separate licensed program, for example, Monotype Garamond and Sonoran Sans Serif. (2) Synonymous with font licensed program.

IBM font structure. IBM's method of defining font components for use with some Advanced Function Printing licensed programs and page printers.

IBM LaserPrinter 4028 font card. (1) A collection of fonts that is contained on a credit-card-like magnetic card that is inserted into a font card slot located in the printer. (2) Synonymous with font card.

IBM-supplied Compatibility Font. (1) A category of font supplied as part of Print Services Facility, Print Management Facility, and Operating System/400. Many of these fonts are derived from fonts created for specific IBM printers (such as the IBM 6670 Information Distributor and the IBM Proprinter) or applications (such as Document Composition Facility). Examples of IBM Compatibility Fonts include the Courier, Gothic Text, and Prestige type families. (2) Synonymous with Compatibility Font and IBM Compatibility Font.

IBM 4028 Font Metrics. Information about those fonts found in the IBM LaserPrinter 4028. This information includes font descriptions. IBM 4028 Font Metrics allow you to format text at the host and print the formatted text on the IBM LaserPrinter 4028. Font metrics contain all the information needed for formatting characters, but they do not contain the characters themselves. Therefore the 4028 Font Metrics cannot be downloaded.

ICCF. Interactive Computing and Control Facility.

inline. (1) In printing, the direction of successive characters in a line of text. (2) Synonymous with inline direction.

inline direction. Synonym for inline.

intelligent printer data stream (IPDS). An all-points-addressable data stream that allows users to position text, images, and graphics at any defined point on a printed page.

Interactive Computing and Control Facility (ICCF). See VSE/ICCF.

Interactive System Productivity Facility (ISPF). An IBM licensed program that serves as a full-screen editor and dialogue manager. Used for formatting programs, it provides a means of generating standard screen panels and interactive dialogues between the application programmer and terminal user.

intercharacter space. Horizontal space between two adjacent capital letter matrices.

International Organization for Standardization (ISO). An organization of national standards bodies from various countries established to promote development of standards to facilitate international exchange of goods and services, and develop cooperation in intellectual, scientific, technological, and economic activity.

interword space. Synonym for word space.

IPDS. Intelligent printer data stream.

ISO. International Organization for Standardization.

ISPF. Interactive System Productivity Facility.

italic. A type style with characters that slant to the right.

J

JCL. Job control language.

job control language (JCL). A control language used to identify a job to an operating system and to describe the job's requirements.

K

kanji. (1) A graphic character set consisting of symbols used in some ideographic alphabets. Each character is represented by 2 bytes. (2) See also katakana.

katakana. (1) A character set of symbols used in one of the two common Japanese phonetic alphabets, which is used primarily to write foreign words phonetically. (2) See also kanji.

KB. Kilobyte; 1024 bytes.

kerning. (1) Reduction of the space between two adjacent characters, for example, overlapping character boxes to print or display cursive writing. (T) (2) The design of graphic characters so that their character boxes overlap. The toned picture elements (pels) of the character appear outside the character cell.

keyboard character. (1) A character (letter, numeral, mark, or sign) visible on the keys of a terminal keyboard. (2) Contrast with printed character.

L

licensed program. A separately sold program and its associated materials that bear an IBM copyright and are offered to customers under the terms and conditions of either the Agreement for IBM Licensed Programs or the IBM Program License Agreement.

ligature. Two or more characters printed together so that they are connected, for example, ff and ffi.

light. (1) Any typeface characterized by fine strokes. (2) Contrast with bold.

line space. The vertical distance between the baseline of the current line and the baseline of the preceding line.

logical page. The boundary for determining the limits of printing. See also physical page.

lowercase. (1) Pertaining to small letters as distinguished from capitals, for example, a, b, g, rather than A, B, G. (2) Contrast with uppercase.

M

mark. A symbol or symbols that indicate the beginning or the end of a field, a word, or an item of data, such as a file, record, or block. (I) (A)

marking. A method that refers to the updating of certain structured fields that identifies a resource as being printer resident.

member. (1) A partition of a partitioned data set. (2) In MVS, the smallest unit of data that can be stored in and retrieved from a sublibrary.

metrics. See font metrics.

monospacing. (1) A method of spacing in which the space between the characters does not vary. (2) Contrast with proportional spacing.

Multiple Virtual Storage (MVS). Multiple Virtual Storage, consisting of MVS/System Product Version 1 and the MVS/370 Data Facility Product operating on a System/370 processor.

MVS. Multiple Virtual Storage.

N

naming convention. The established pattern of letters and numerals used in forming the names of font components.

national language support. Coded fonts, code pages, and character sets that provide access to characters

and symbols needed for one or more languages or countries.

O

OCR. Optical character recognition.

operating system (OS). Software that controls the execution of programs and that can provide services, such as resource allocation, scheduling, input/output control, and data management. Although operating systems are predominantly software, partial hardware implementations are possible. (I) (A)

Operating System/400 (OS/400). Pertaining to the IBM licensed program that can be used as the operating system for Application System/400.

optical character recognition (OCR). Character recognition that uses optical means to identify graphic characters. (I) (A)

order number. The number by which an IBM licensed program can be ordered. The number for the IBM Advanced Function Printing Fonts/400 licensed program also shows the type family feature number.

orientation. (1) The number of degrees an object is rotated relative to a reference, for example, the orientation of printing on a page, relative to the page coordinates. (2) See also text orientation and rotation.

OS. Operating system.

OS/400. Operating System/400.

outline fonts. (1) Fonts whose graphic character shapes are defined mathematically rather than by raster patterns. (2) Fonts created in the format described in *Adobe Type 1 Font Format*, a publication available from Adobe Systems Inc.

overscore. A line parallel to the character baseline and placed above the character.

overstriking. The merging of two or more graphic characters on a sheet of paper.

P

partitioned data set (PDS). A data set in direct access storage that is divided into partitions, called members, each of which can contain a program, part of a program, or data. Synonymous with program library.

page definition. A resource that contains the formatting controls for line data. A page definition can include controls for the number of lines per logical page, font selection, print direction, and

mapping individual fields to positions on the logical page.

PDS. Partitioned data set

pel. Picture element.

pel density. (1) The number of picture elements per unit of linear measurement. (2) See also resolution.

phonetic character. Any symbol used to represent the sound of spoken words or word parts, for example, the katakana symbol that represents *NU*.

PFA. Type 1 font outlines in ASCII format. Contrast with PFB.

PFB. Type 1 font outlines in binary format. Contrast with PFA.

physical page. (1) All or part of a logical page that is entered or displayed at one time. (2) See also logical page.

pica. A unit of about 1/6 inch used in measuring typographical material. It is similar to a cicero in the Didot point system.

picture element (pel). (1) In computer graphics, the smallest element of a display surface that can be independently assigned color and intensity. (T) (2) The addressable unit on a page printer. (3) See also all points addressable and raster pattern.

pitch. (1) A unit of width of type, based on the number of characters that can be placed in a linear inch, for example, 10-pitch has 10 characters per inch. Uniformly spaced fonts are measured in pitch. (2) Contrast with point.

PMF. Print Management Facility

point. (1) In printing, a unit of about 1/72 inch used in measuring typographical material. There are approximately 12 points in a pica. (2) Contrast with pitch.

PostScript. An interpretive programming language that describes the appearance of text, graphical shapes, and sampled images on a printed page, by defining a print file format that is the interface between document composition applications and raster printing devices.

prefix. The first 2 characters of a font component that identify the type of font component.

print direction. Synonym for baseline direction.

printed character. (1) Any character that can be printed by a printing device, whether or not that character is visible on the attached terminal keyboard. (2) Contrast with keyboard character.

printer. (1) An output unit that produces a hard copy record of data in the form of a sequence of discrete graphic characters that belong to one or more predetermined character sets. (T) (2) A device that writes output data from a system on paper or other media.

printer-resident fonts. Fonts that are permanently stored in the memory of the printer or loaded from an IBM LaserPrinter 4028 font card.

print resolution. See resolution.

Print Management Facility (PMF). An interactive, menu-driven program that can be used to create and modify fonts and to define output formatting for data printed on a page printer.

Print Services Facility (PSF). The access method that supports advanced function printers. PSF can interface either directly to a user's application program or indirectly through the Job Entry Subsystems of MVS.

program. A sequence of instructions suitable for processing by a computer. Processing can include the use of an assembler, a compiler, an interpreter, or a translator to prepare the program for execution, as well as to execute it. (I)

program library. (1) An organized collection of computer programs, or parts of computer programs, and possibly information pertaining to their use. A program library is often called according to the characteristic of its elements, for example, a procedure library, a source program library. (2) Synonym for partitioned data set.

proportion. Relationship of the width of a letter to its height.

proportionally spaced font. (1) A font with graphic characters contained in character cells varying with the size of each graphic character. This allows for even spacing between printed characters and eliminates excess white space around narrow characters, such as the letter i. (2) Contrast with uniformly spaced font.

proportional spacing. Spacing of characters according to their natural width. Contrast with monospacing.

PSF. Print Services Facility.

R

raster. (1) In computer graphics, a predetermined pattern of lines that provides uniform coverage of a display space. (2) In advanced function printers, an on/off pattern of electrostatic images produced by the laser print head under control of the character generator.

raster pattern. (1) A series of picture elements (pels) arranged in scan lines to form an image. (2) See also picture element.

relative metrics. (1) Measurements in dimensionless units for one or several graphic characters. Dimensionless units are expressed as fractional parts of a unit-square design space (em-square) whose sides correspond to the vertical size of the font. Because the units are dimensionless, the same metrics can be used for different point sizes and different raster-pattern resolutions. Relative metrics require defining the units of measure for the em-square, the point size of the font, and, if applicable, the pel resolution of the raster pattern. For example, for 1000 units per em-square, a relative value of 500 (500/1000 of an em-square) is equivalent to 0.08333 inches for a 12-point 240-pel font (500/1000 x 12/72 inch) or 20 pels (500/1000 x 240 x 12/72 inch). (2) See also bounded-box (3) Contrast with fixed metrics. relative metrics and font metrics.

resolution. (1) In computer graphics, a measure of the sharpness of an image, expressed as the number of lines and columns on the display screen or the number of pels per unit area. (2) See also pel density.

reverse image. Converting images so that black becomes white and white becomes black.

roman. Relating to a type style with upright letters.

rotation. (1) In printing, the number of degrees a graphic character is turned relative to the page coordinates. (2) See also orientation.

S

sans serif. (1) Type that is characterized by the absence of serifs. (2) Contrast with serif.

script. (1) Letters created to imitate handwriting. (2) Synonymous with cursive.

semibold. (1) A typeface that is lighter than bold but darker than medium. (2) See also bold.

serif. (1) A short line angling from or crossing the free end of a stroke. This includes horizontal lines at the top and bottom of vertical strokes on capital letters, for example, I and H, and the decorative stroke at the end of one or more of the horizontal members, for example, a capital E. (2) Contrast with sans serif.

small caps. Capital letters in the same style as the normal capital letters in a font, but approximately the size of the lowercase letters. See also caps.

SMP. System Modification Program

software. All or part of the programs, procedures, rules, and associated documentation of a data processing system. Software is an intellectual creation that is independent of the medium on which it is recorded. (T) Contrast with hardware.

space. (1) A basic unit of area, usually the size of a single character. (A) (2) A blank area separating words or lines. (3) To cause a printer to move the paper a specified number of lines either before or after it prints a line.

special character. (1) A graphic character that is not a letter, numeral, or blank character, and usually not an ideogram, for example, a punctuation mark, general currency symbol, or percent sign. (T) (2) A character other than a numeral, letter, #, \$, or @, for example, *, +, and % are special characters.

storage. (1) A functional unit into which data can be placed, in which they can be retained, and from which they can be retrieved. (T) (2) The action of placing data into a storage device. (I) (A) (3) A storage device. (A)

storage allocation. The assignment of storage areas to specified data. (I) (A)

structured field. In Advanced Function Printing, a self-identifying string of bytes and its data or parameters.

style. Inclination of a letter around a vertical axis. It can be upright (as in roman) or slanted (as in italic or cursive).

syllabary. A writing system in which each character represents a syllable.

System Modification Program (SMP). A program used to install software and software changes on OS/VS1 and OS/VS2 systems.

T

terminal. A functional unit in a system or communication network at which data can enter or leave. (T)

text. In text processing, a sequence of elements intended to convey a meaning, whose interpretation is essentially based upon the reader's knowledge of some natural language or artificial language, for example, a business letter printed on paper or displayed on a screen. The elements can consist of characters, symbols, words, phrases, paragraphs, sentences, or tables. (T)

text orientation. (1) A description of the appearance of text as a combination of the print direction and character rotation. (2) See also orientation.

track. (1) The path or one of the set of paths on a data medium associated with a single reading or writing component as the data medium moves past the component. (I) (A) (2) A circular path on the surface of a disk or diskette on which information is recorded and from which recorded information is read.

translating. The process of incorporating characters that are unavailable on the keyboard into a document.

Type 1 font. A font conforms to the format described in the publication *Adobe Type 1 Font Format*, available from Adobe Systems, Incorporated. Type 1 fonts are also known as outline fonts, from which fonts of different sizes can be generated. Type 1 fonts are generally shipped with two files: an .AFM file and a .PFB file.

Type 1 name. A name which is an alphabetic description of a character. For example, aacute describes a lowercase a with a acute accent.

typeface. (1) A specific type style, such as Helvetica or Times New Roman. (2) One of the many attributes of a font, others, for example, being size and weight. (3) A collection of fonts, each having a different height or size of character sets.

type family. All characters of a single design, regardless of attributes, such as width, weight, style, and size, for example, Courier or Helvetica.

type font. Type of a given size and style, for example, 10-point Latin1: Helvetica roman medium. (A) See also font.

typeset. (1) To arrange the type on a page for printing. (2) Pertaining to material that has been set in type.

type size. (1) A measurement in pitch or points of the height and width of a graphic character in a font. (2) One of the many attributes of a font, others, for example, being weight and typeface.

type style. The form of characters within a set of the same font, for example, elite and pica. (T) Attributes such as posture, style, weight, and width can vary in a type style.

type weight. (1) The degree of boldness of a typeface series, caused by different thickness of the strokes that form a graphic character. (2) One of the many attributes of a font, others, for example, being size and typeface. (3) The weight can be described in such terms as light, semibold, bold, and so on.

type width. The horizontal size (set size) of a given typeface. The width can be given in units of measurement, such as set 9 point, or it can be descriptive: ultra-condensed or expanded.

typographic font. A typeface originally designed for typesetting systems. Typographic fonts are usually proportionally spaced fonts.

typography. Printing with type.

U

unbounded-box format. (1) An organization of character graphics and information used by Advanced Function Printing programs for printers such as the IBM 3800 Printing Subsystem Model 3. Character boxes containing each character graphic do require some character positioning information in the form of white space in the character boxes. In addition, a separate character set is required for each combination of character rotation and text orientation. Fonts in unbounded-box format usually require more storage than fonts in bounded-box format. (2) See also bounded-box format.

underscore. (1) A line printed under a character. (2) To place a line under one or more characters; to underline.

uniformly spaced font. (1) A font with graphic characters contained in character cells of uniform size. The distance between reference points of adjacent graphic characters is constant in the inline progression. The white space between the graphic characters can vary. (2) Synonymous with fixed-space font. (3) Contrast with proportionally spaced font.

units of measure. (1) Counting methods that are either specific or relative. (2) See fixed metrics and relative metrics.

uppercase. (1) Pertaining to the capital letters, as distinguished from the small letters, for example, A, B, G, rather than a, b, g. (2) Contrast with lowercase.

V

value. A quantity assigned to a constant, a variable, a parameter, or a symbol.

virtual machine (VM). In VM, a functional equivalent of either a System/370 computing system or a System/370-Extended Architecture computing system. Each virtual machine is controlled by an operating system. VM controls concurrent execution of multiple virtual machines on a single system.

Virtual Storage Extended (VSE). An IBM licensed program whose full name is the Virtual Storage Extended/Advanced Function. It is a software operating system that controls the execution of programs.

VM. Virtual machine.

VSE. Virtual Storage Extended.

VSE/ICCF. VSE/Interactive Computing and Control Facility. An IBM licensed program that makes the services of a VSE-controlled computing system available to authorized display station users. Availability of services is on a time-shared basis, and display stations must be linked to the central processor of a system.

W

weight. See type weight.

width. See type width.

word space. (1) The space placed between words in a line. (2) Synonymous with interword space.

Technical Reference for Code Pages

Publication No. S544-3802-02

Use this form to provide comments about this publication, its organization, or subject matter. Understand that IBM may use the information any way it believes appropriate, without incurring any obligation to you. Your comments will be sent to the author's department for the appropriate action. Comments may be written in your language.

Note: IBM publications are not stocked at the location to which this form is addressed. Direct requests for publications or for assistance in using your IBM system, to your IBM representative or local IBM branch office.

	Yes	No
• Does the publication meet your needs?	_____	_____
• Did you find the information:		
Accurate?	_____	_____
Easy to read and understand?	_____	_____
Easy to retrieve?	_____	_____
Organized for convenient use?	_____	_____
Legible?	_____	_____
Complete?	_____	_____
Well illustrated?	_____	_____
Written for your technical level?	_____	_____
• Do you use this publication:		
As an introduction to the subject?	_____	_____
As a reference manual?	_____	_____
As an instructor in class?	_____	_____
As a student in class?	_____	_____
• What is your occupation?	_____	_____

Thank you for your input and cooperation.

Note: You may either send your comments by fax to 1-800-524-1519, or mail your comments. If mailed in the U.S.A., no postage stamp is necessary. For residents outside the U.S.A., your local IBM office or representative will forward your comments.
