

z/OS Communications Server
3.2

Quick Reference

Note:

Before using this information and the product it supports, be sure to read the general information under [“Notices” on page 233](#).

This edition applies to 3.1 of z/OS® (5655-ZOS), and to subsequent releases and modifications until otherwise indicated in new editions.

About this document

This quick reference summarizes information found in:

- [z/OS Communications Server: IP Configuration Guide](#)
- [z/OS Communications Server: IP User's Guide and Commands](#)
- [z/OS Communications Server: IP System Administrator's Commands](#)
- [z/OS Communications Server: SNA Operation](#)
- [z/OS Communications Server: SNA Diagnosis Vol 1, Techniques and Procedures](#)

The information in this document includes descriptions of support for both IPv4 and IPv6 networking protocols. Unless explicitly noted, descriptions of IP protocol support concern IPv4. IPv6 support is qualified within the text.

This document is provided as a source of commonly used operation information for experienced system programmers and operators, and it contains information on:

- IP MVS Operator commands
- VTAM® commands
- VTAM start options

Use the table of contents to locate the reference information you need. For more detailed information, refer to the document listed at the start of each section.

Summary of changes

This document contains terminology, maintenance, and editorial changes, including changes to improve consistency and retrievability. Technical changes or additions to the text and illustrations for the current edition are indicated by a vertical line to the left of the change.

Summary of changes for z/OS 3.2

The following content is new, changed, or no longer included in z/OS 3.2.

New

The following content is new.

September 2025 release

- None.

Changed

The following content is changed.

September 2025 release

- None.

Deleted

The following content is deleted.

September 2025 release

- None.

Changes made in z/OS Communications Server 3.1

The following content is new, changed, or no longer included in z/OS 3.1.

Changed information

- EQDIO, see the following topics:
 - [“F VTAMOPTS command” on page 184](#)
- OSA-Express Enhanced Inbound Blocking (EIB), see the following topics:
 - [“F VTAMOPTS command” on page 184](#)
 - [“Start options” on page 213](#)
- Withdrawal of support of VTAM LSA and TCP/IP LCS devices, see the following topics:
 - [“F NOTRACE command” on page 165](#)
 - [“F TRACE command” on page 178](#)
 - [“Start options” on page 213](#)

Chapter 1. IP commands

In this section, commands are listed alphabetically.

For more information on these commands, see [z/OS Communications Server: IP Configuration Guide](#) and [z/OS Communications Server: IP System Administrator's Commands](#).

IP MVS operator commands

DISPLAY TCPIP

Display the status of the current TCP/IP images:

This is the general format of the DISPLAY command used to display the status of the current TCP/IP images.

➤➤ Display — TCPIP ➤➤

This is the format of DISPLAY command used to display information about TCP/IP applications.

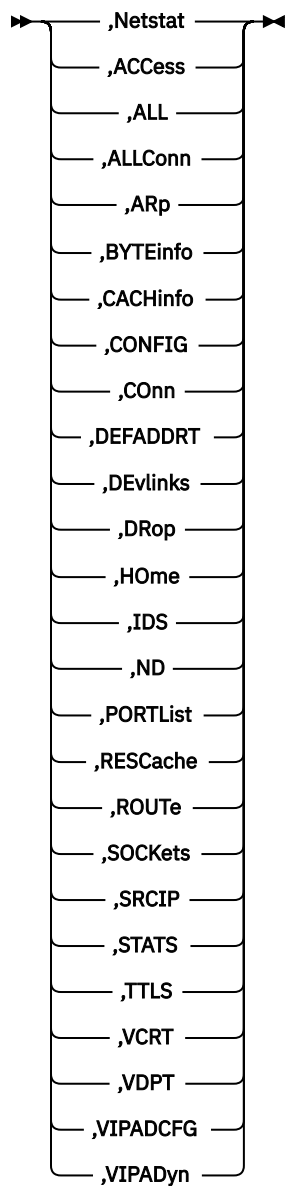

➤➤ Display — TCPIP,  ,APPL= *applid* ,CMD=CLIENT ➤➤

DISPLAY TCPIP HELP

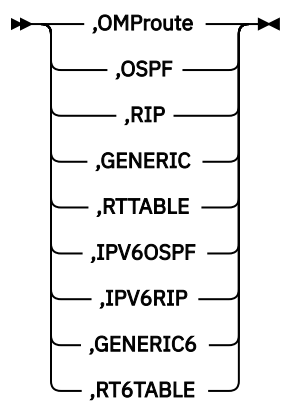

Display the syntax of MVS operator commands for TCP/IP:

Netstat Display command

Omproute Display command

Sysplex Display command

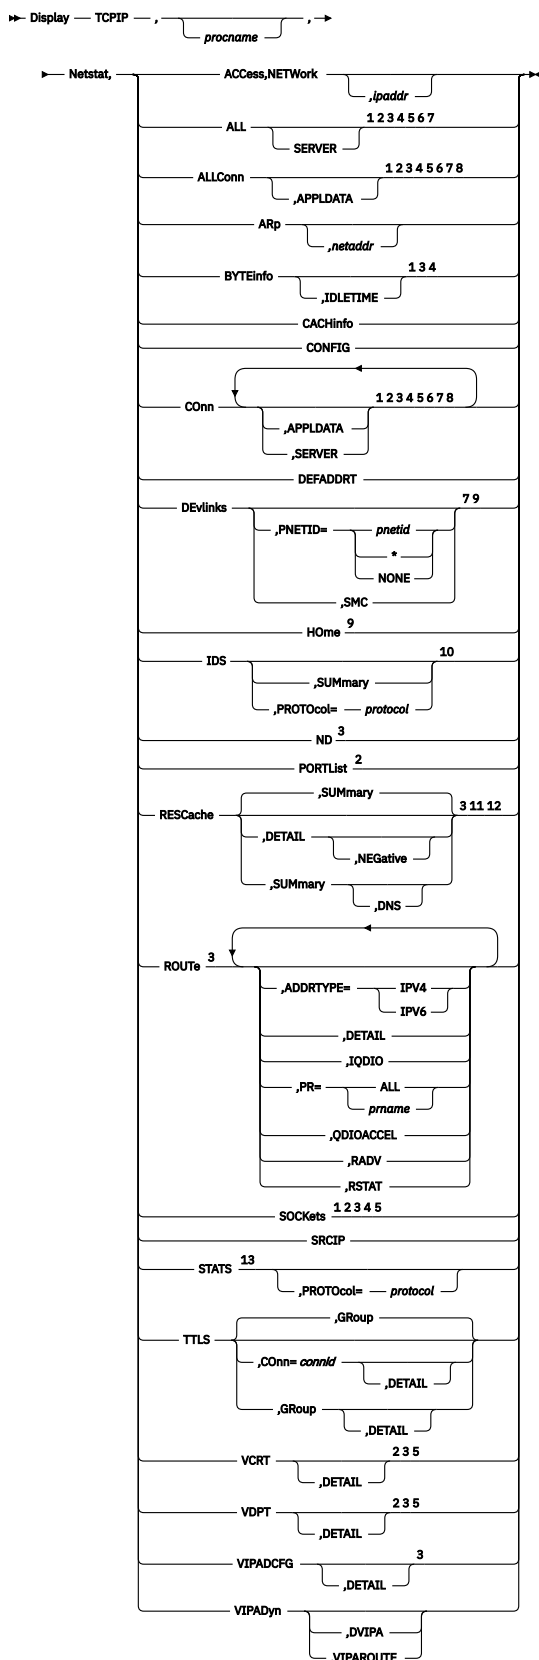

Sysplex Vary command

DISPLAY TCPIP NETSTAT

Request NETSTAT information:

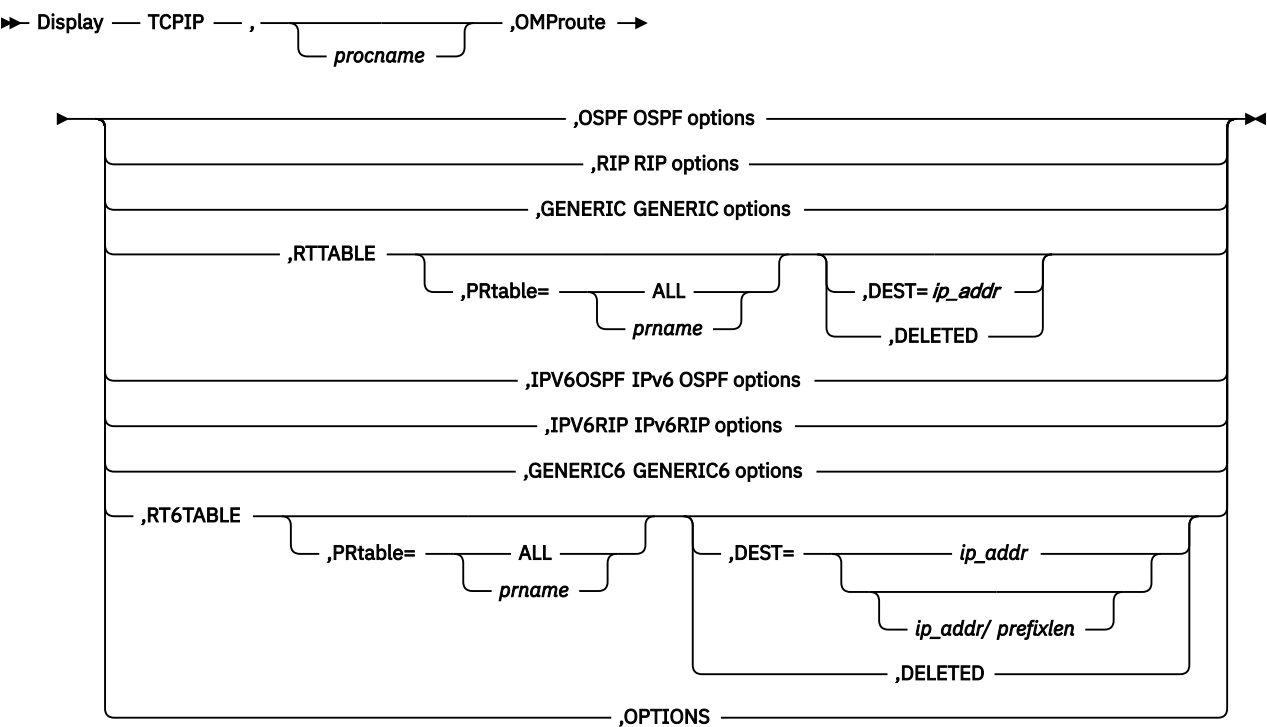

Notes:

- ¹ The CLIENT filter is valid only with ALL, ALLConn, BYTEinfo, Conn, and SOCKets.
- ² The PORT filter is valid only with ALL, ALLConn, Conn, PORTList, SOCKets, VCRT, and VDPT.
- ³ The IPAddr filter is valid only with ALL, ALLConn, BYTEinfo, Conn, ND, RESCache, ROUTe, SOCKets, VCRT, VDPT, and VIPADCFG.
- ⁴ The NOTN3270 filter is valid only with ALL, ALLConn, BYTEinfo, Conn, and SOCKets.
- ⁵ The IPPort filter is valid only with ALL, ALLConn, Conn, SOCKets, VCRT, and VDPT.
- ⁶ The APPLD filter is valid only with ALL, ALLConn, and Conn.
- ⁷ The SMCID filter is valid only with ALL, ALLConn, Conn, and DEvlinks.
- ⁸ The CONNTYPE filter is valid only with ALLConn and Conn.
- ⁹ The INTFName filter is valid only with DEvlinks and HOME.
- ¹⁰ The valid protocol values are TCP and UDP.
- ¹¹ The DNSAddr select string is valid only with RESCache.
- ¹² The HOSTName select string is valid only with RESCache.
- ¹³ The valid protocol values are IP, ICMP, TCP, and UDP.
- ¹⁴ If the MAX parameter is not specified on the command, the default value for the MAX parameter is the value of the MAXRECS parameter on the GLOBALCONFIG profile statement.

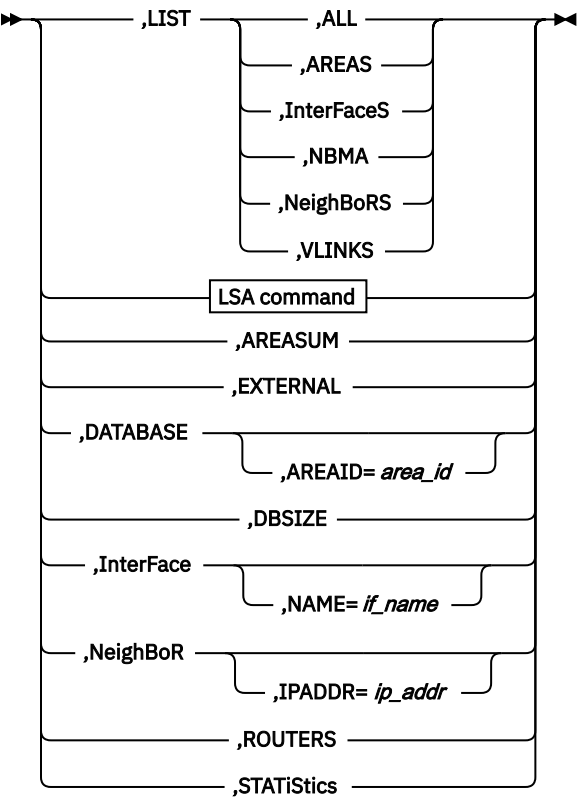

Note: The minimum abbreviation for each parameter is shown in uppercase letters.

DISPLAY TCPIP OMROUTE

Display OMROUTE configuration and state information:

OSPF options

LSA command

➤ ,LSA — ,LSTYPE= *ls_type* — ,LSID= *lsid* — ,ORIGinator= *ad_router* — ,AREAID= *area_id* ➤

RIP options

➤ ,LIST — ,ALL — ,InterFaceS — ,ACCEPTED — ,InterFace — ,NAME= *if_name* — FILTERS ➤

GENERIC options

➤ ,LIST — ,ALL — ,InterFaceS — ,InterFace ➤

IPv6 OSPF options

➤ ,ALL — ,AREASUM — ,InterFace — ,NAME= *if_name* — ,ID= *if_id* — ,VLink — ,ENDPT= *router-id* — ,NeighBoR — ,ID= *router-id* — ,IFNAME= *if_name* — ,DBSIZE — IPv6 LSA command — ,EXTERNAL — ,DATABASE — ,AREAID= *area_id* — ,ROUTERS — ,STATISTICS ➤

IPv6 LSA command

➤ ,LSA — ,LSTYPE= *ls_type* — ,LSID= *lsid* — ,ORIGinator= *ad_router* — ,AREAID= *area_id* ➤

➤ ,IFNAME= *if_name* ➤

IPv6RIP options

GENERIC6 options

DISPLAY TCPIP OSAINFO

Request OSA information:

Notes:

¹ If no modifiers are specified, all sections for which information exists are displayed.

Rule: You must specify the parameters in the order shown in the syntax diagram.

DISPLAY TCPIP STOR

Display TCP/IP storage usage information or the service level of a TCP/IP module:

DISPLAY TCPIP SYSPLEX

Request SYSPLEX information:

Notes:

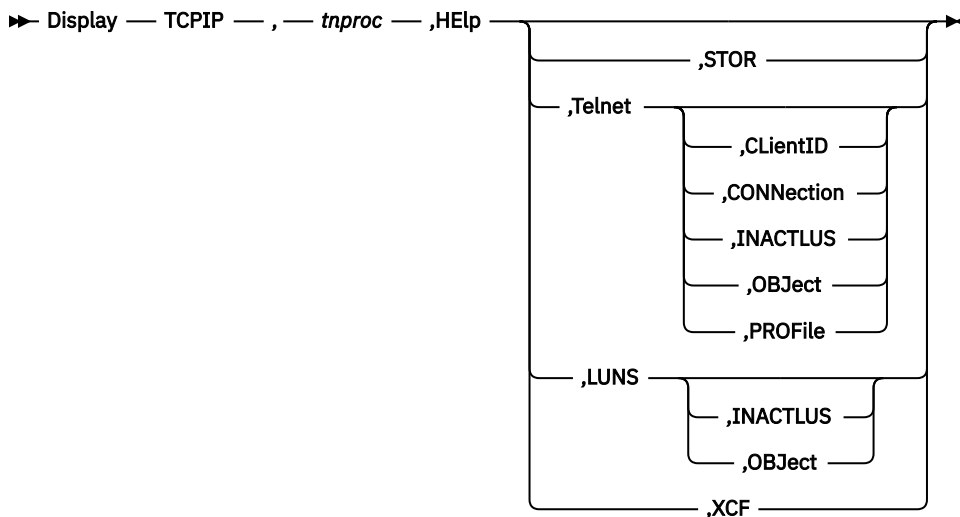

¹ MAX limits the number of records displayed to the MVS operator's console.

DISPLAY TCPIP TELNET

This is the format of the DISPLAY command used to display the status of the current TN3270E Telnet server images.

►► Display TCPIP , TELNET ►►

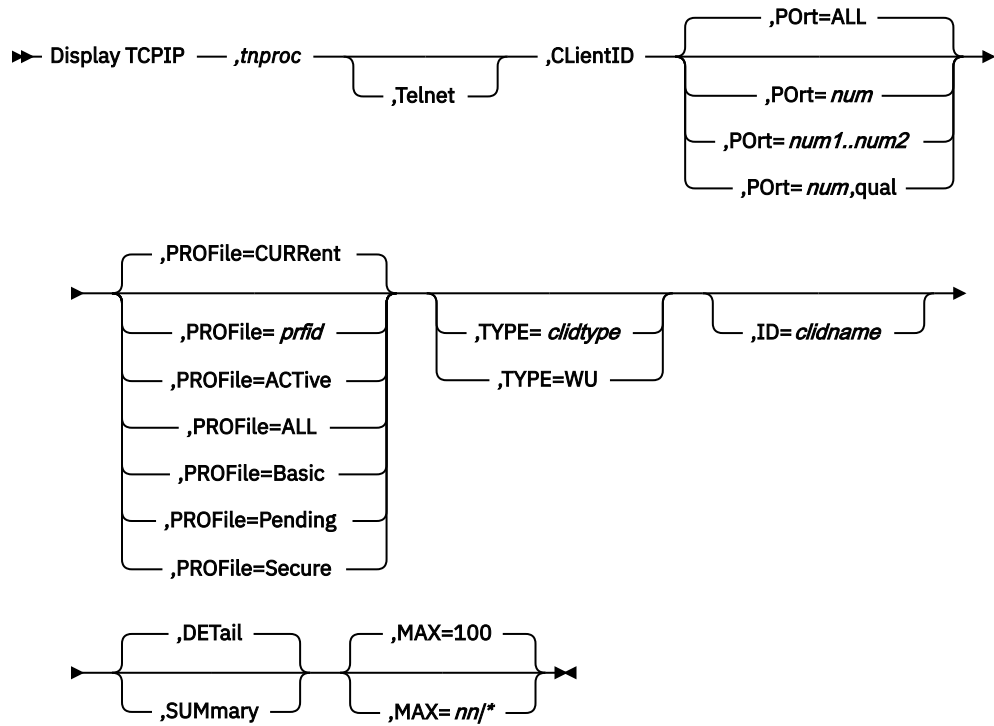

HELP display command:

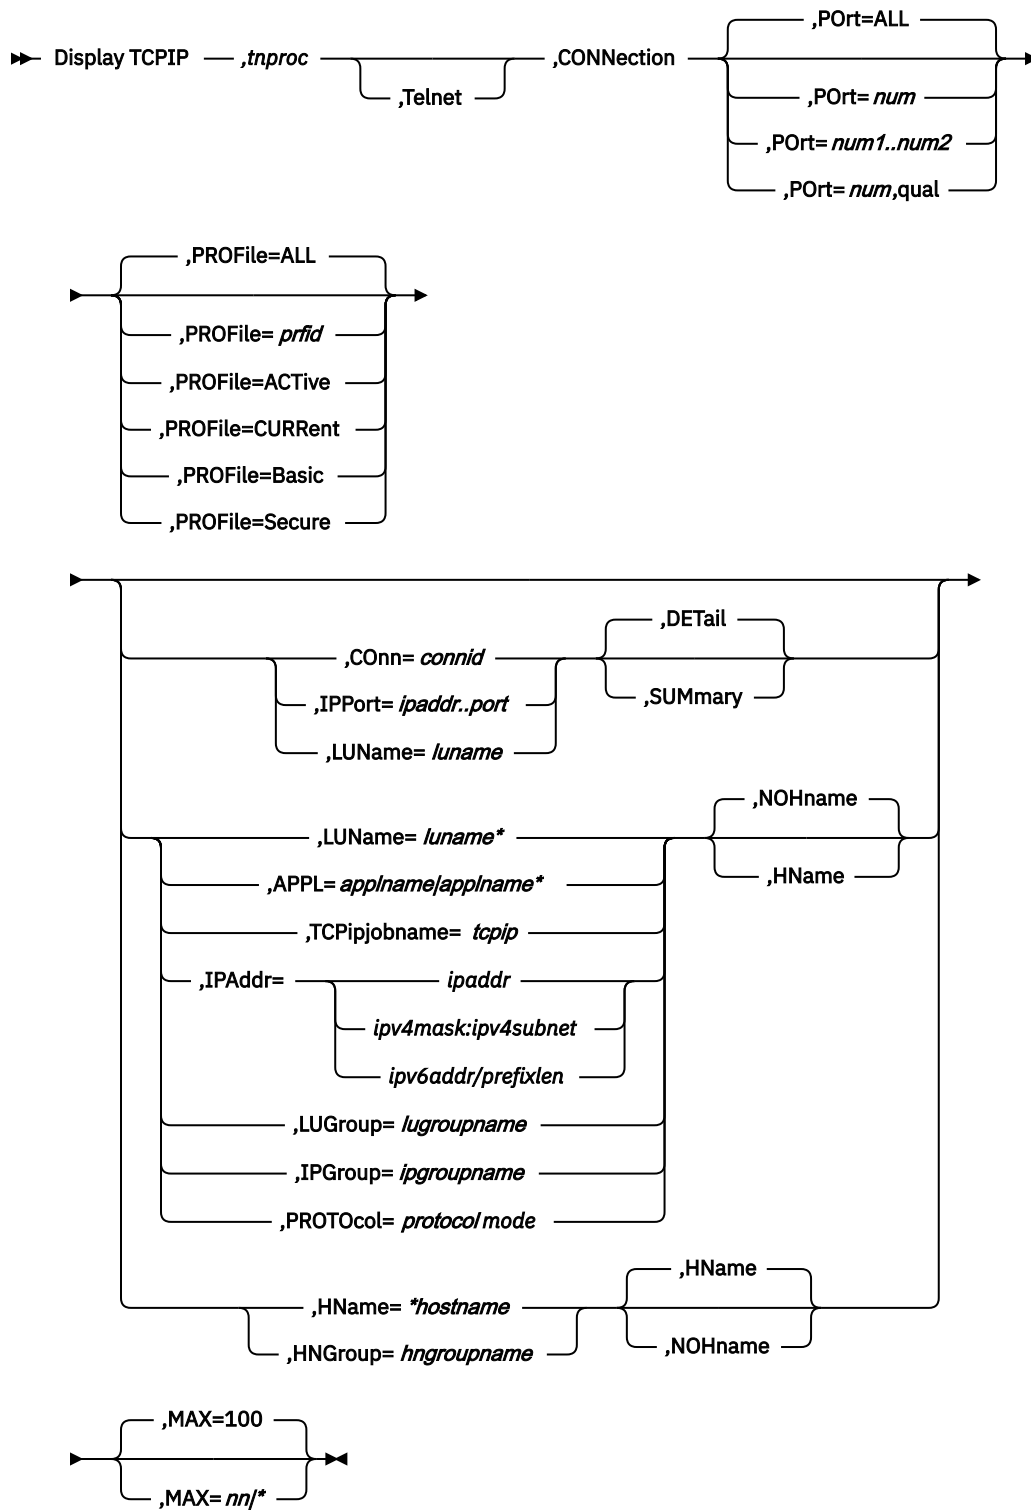

STOR display command:

CLIENTID display command:

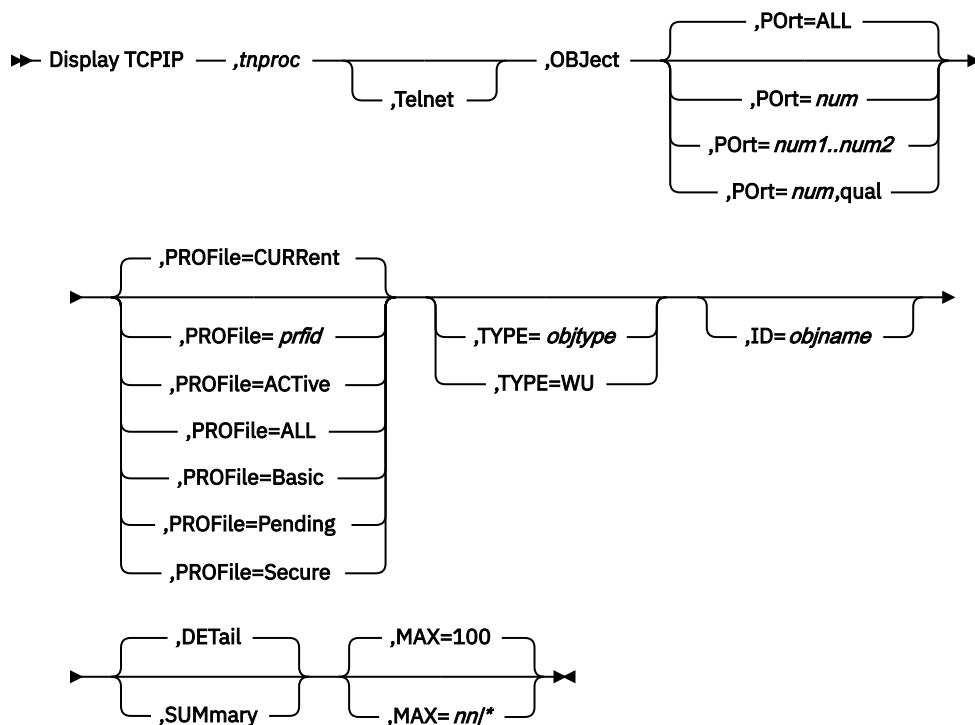

CONNECTION display command:

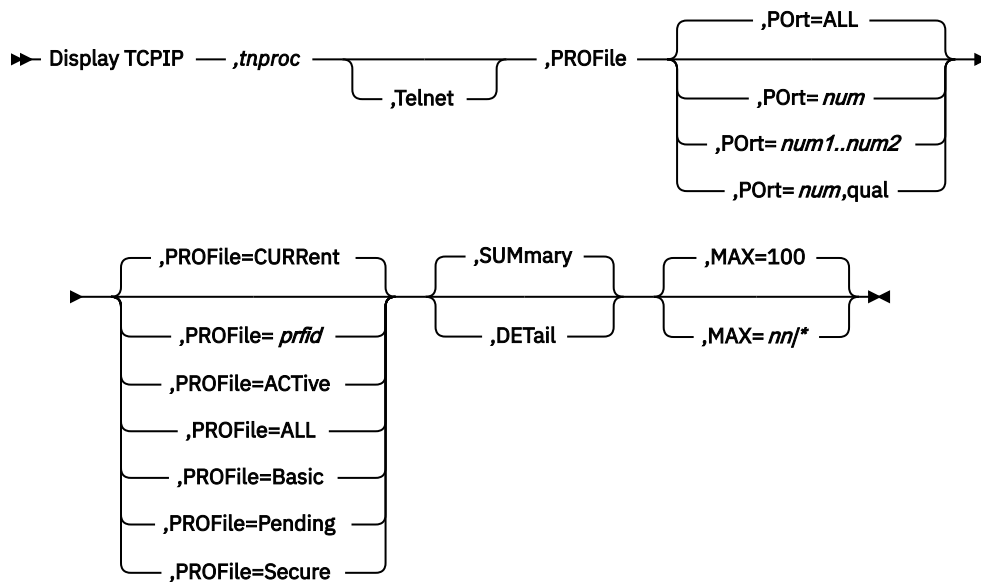

INACTLUS display command:

OBJECT display command:

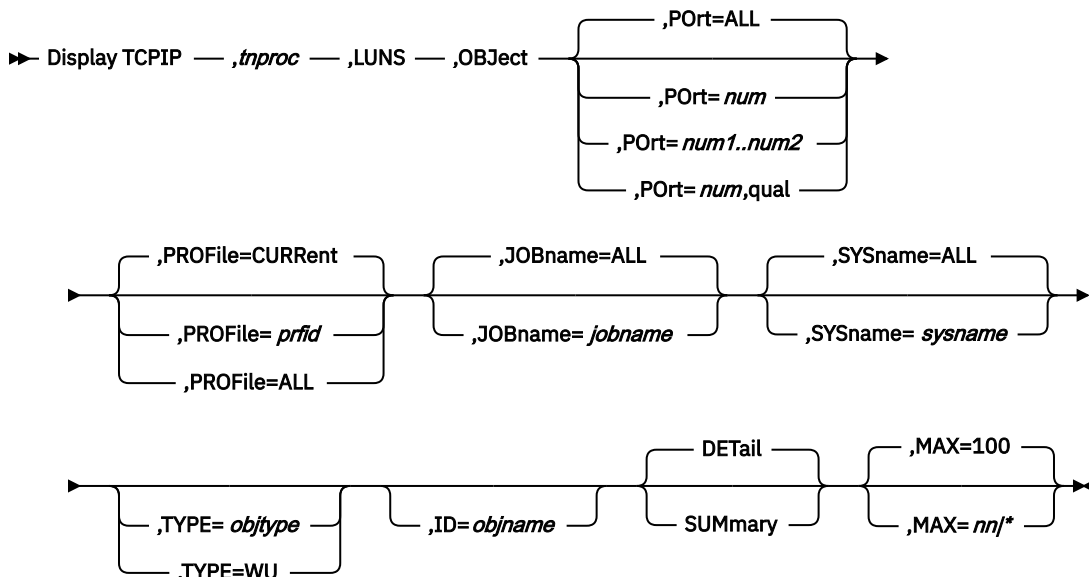

PROFILE display command:

LUNS INACTLUS display command:

LUNS OBJect display command:

XCF GRoup display command:

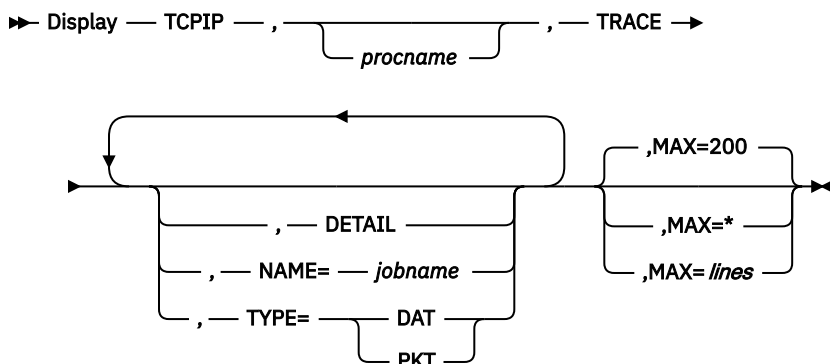

XCF STats display command:

DISPLAY TCPIP TRACE

Display information about network management applications that are using the real-time application-controlled TCP/IP trace network management interface (NMI) to obtain real-time network management data from the TCP/IP stack. See [Real-time application-controlled TCP/IP trace NMI in the z/OS Communications Server: IP Programmer's Guide and Reference](#) for more information about this NMI.

EZACMD command

Issue commands from the operator console, TSO, or IBM® Tivoli® NetView for z/OS.

Operator console syntax

TSO syntax

NetView syntax

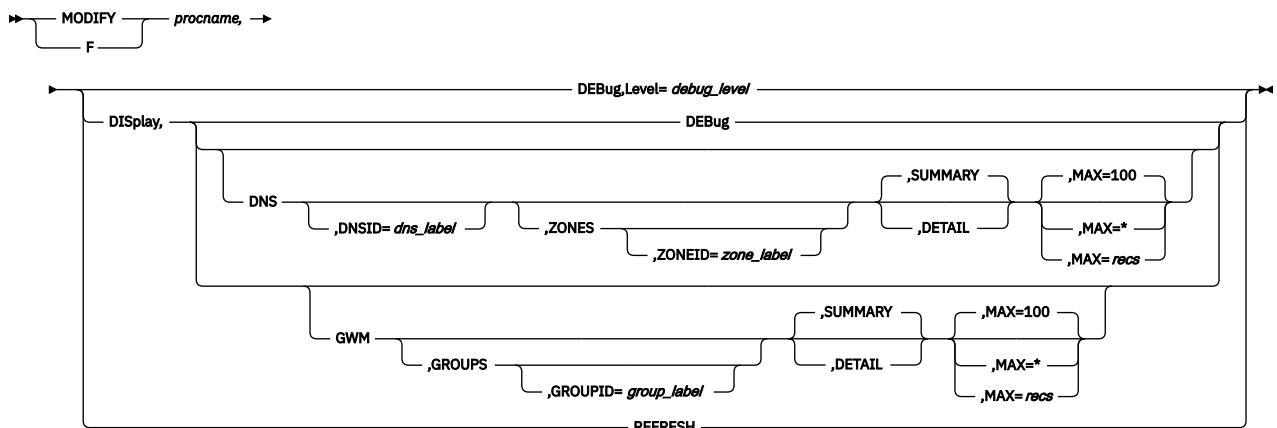

MODIFY TCPIP command

Dynamically change characteristics of an active task:

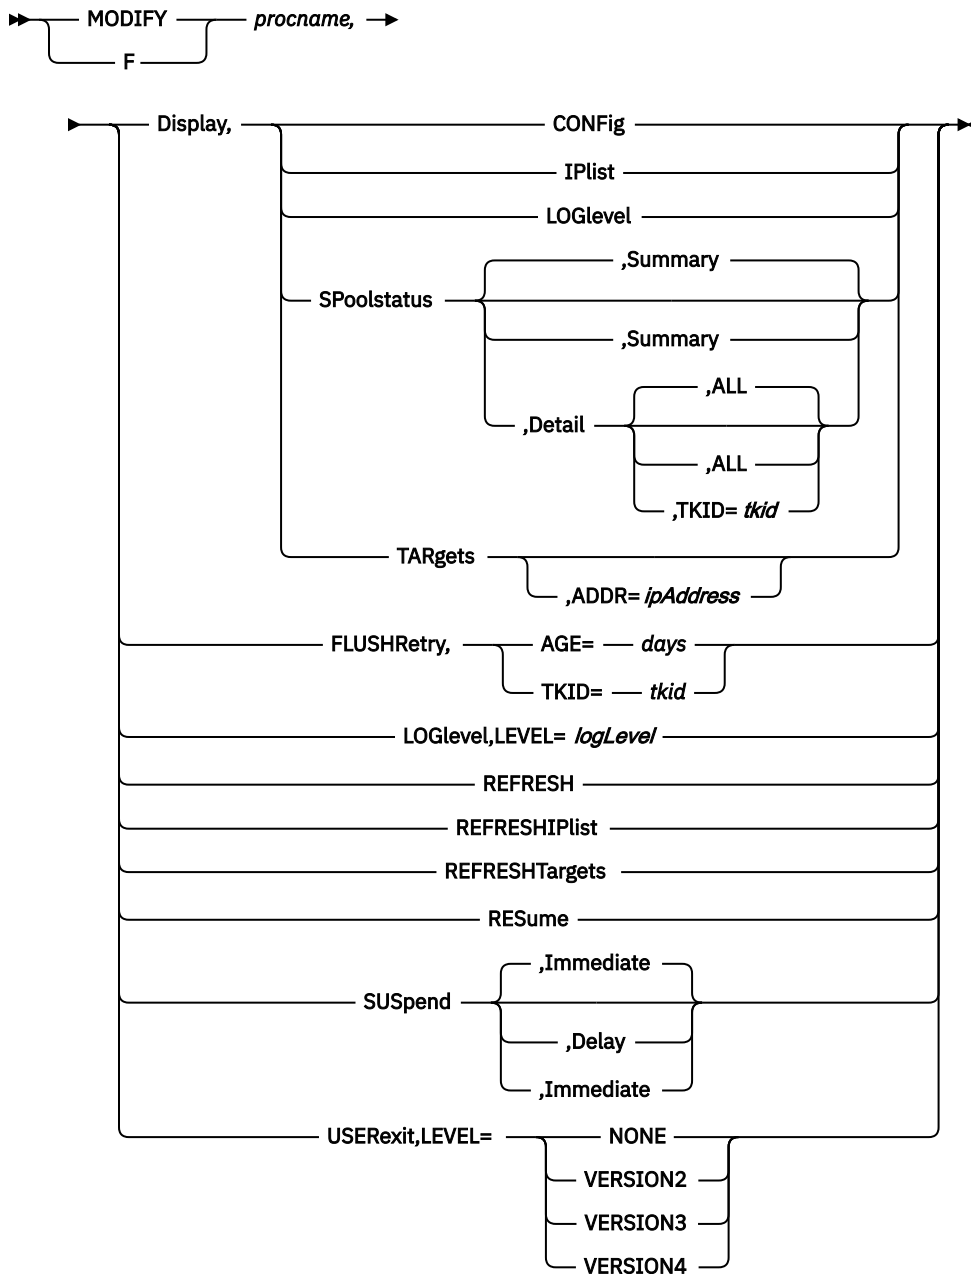

Automated domain name registration application (EZBADNR)

Control the automated domain name registration application (EZBADNR) from the operator's console using the MODIFY command:

CSSMTP application

Control and monitor the Communication Server Simple Mail Transfer Protocol (CSSMTP) application:

Defense Manager daemon

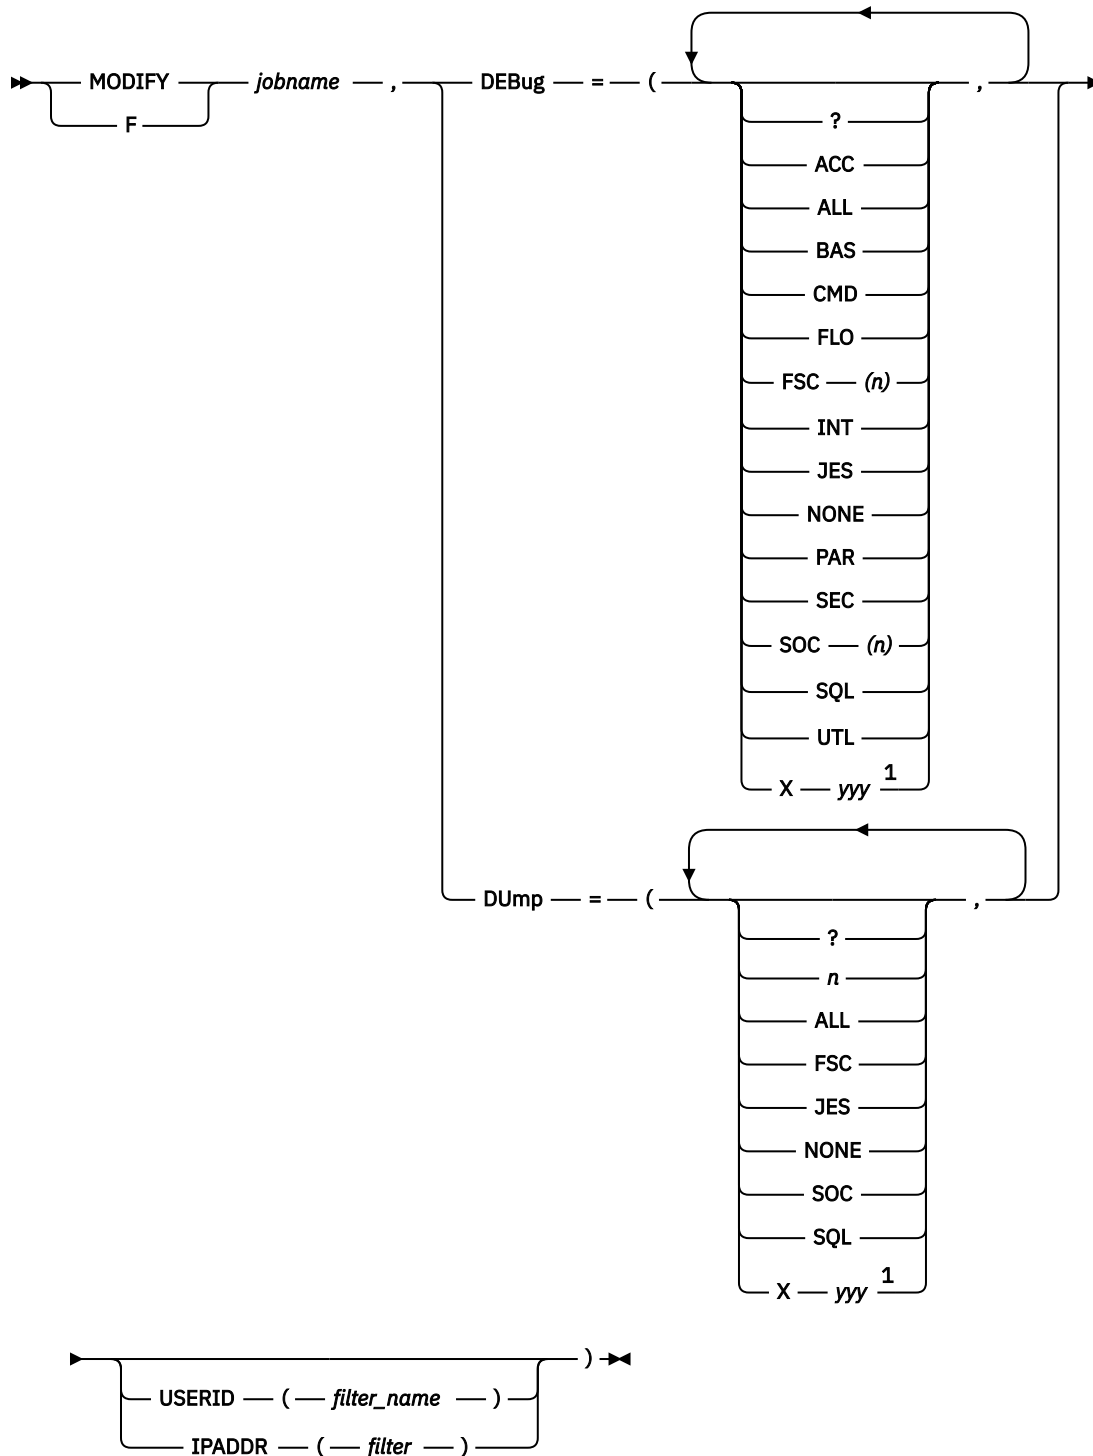

Control Defense Manager daemon (DMD) functions:

➤ MODIFY *procname, FORCE_INACTIVE, stackname* ➤
 F

FTP server

Start and stop tracing after initialization is complete:

Notes:

¹ Prepend any option *yyy* with X to turn off that trace.

IKE server

Control IKE server functions:

Network security services server

Control the network security services (NSS) server functions:

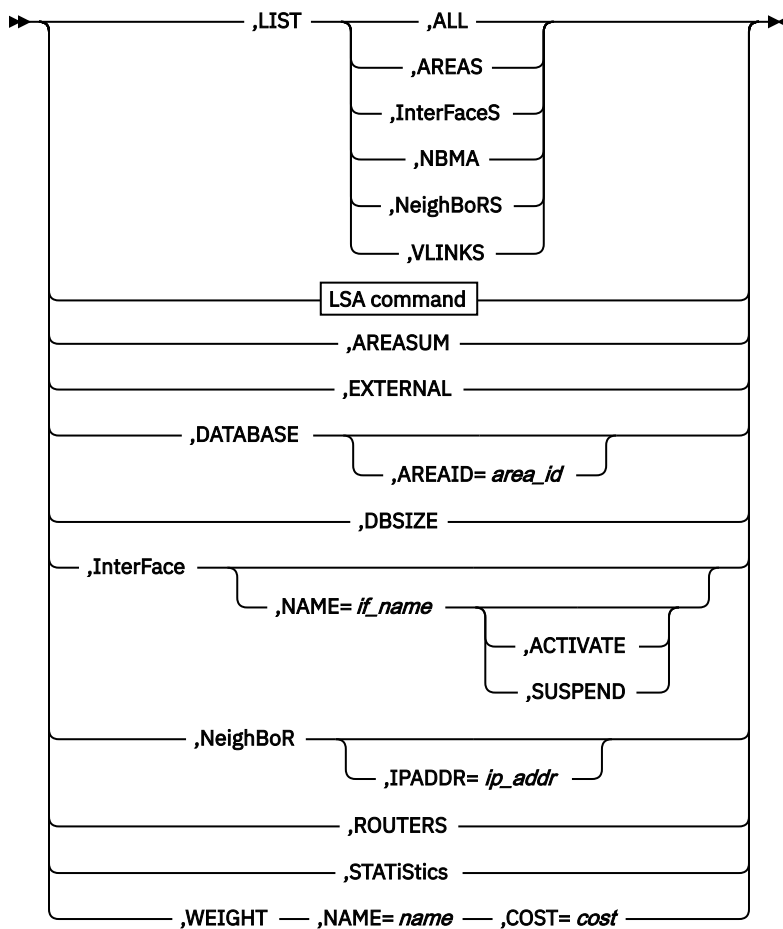

Control OMPROUTE from the operator's console:

```

show ip ospf
  [RECONFIG]
  [KILL]
  [ROUTESA= {ENABLE | DISABLE}]
  [TRACE= trace_level]
  [DEBUG= debug_level]
  [TRACE6= trace6_level]
  [DEBUG6= debug6_level]
  [SADEBUG= sadebug_level]
  [OSPF OSPF options]
  [RIP RIP options]
  [GENERIC GENERIC options]
  RTTABLE
    [ ,PRTABLE= {ALL | pname} ]
    [ ,DEST= {ip_addr | ip_addr/ prefixlen} ]
    [ ,DELETED ]
  RT6TABLE
  OPTIONS
  
```

Chapter 1. IP commands **19**

LSA command

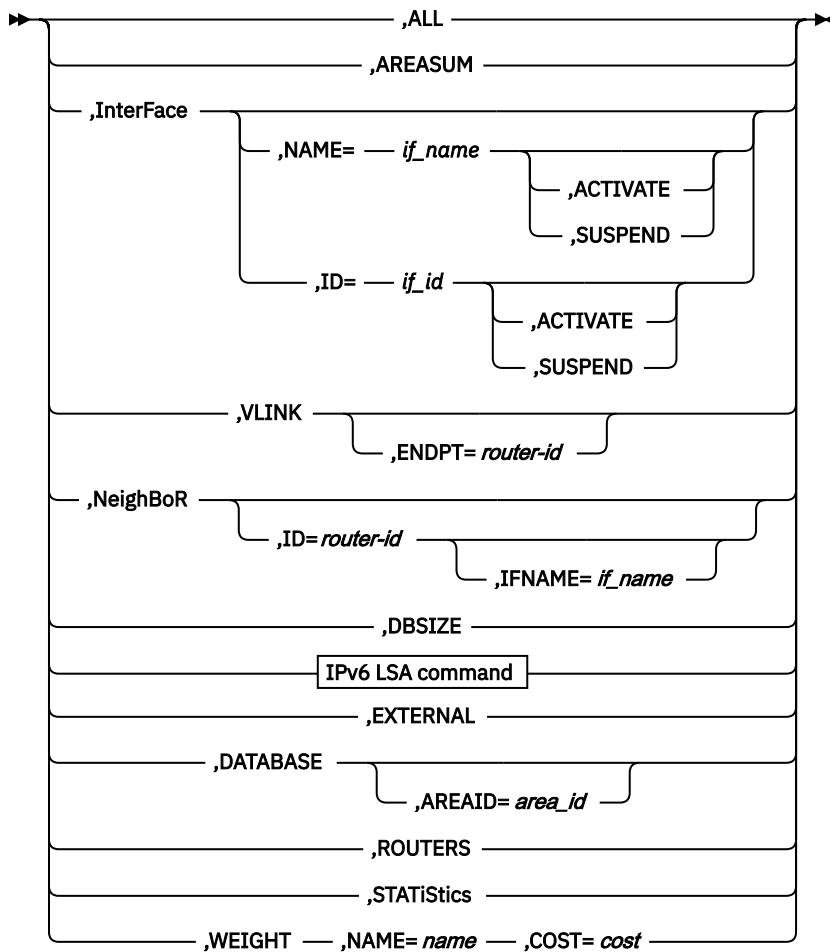

RIP options

GENERIC options

IPv6 OSPF options

IPv6 LSA command

►► ,LSA →

IPv6 RIP options

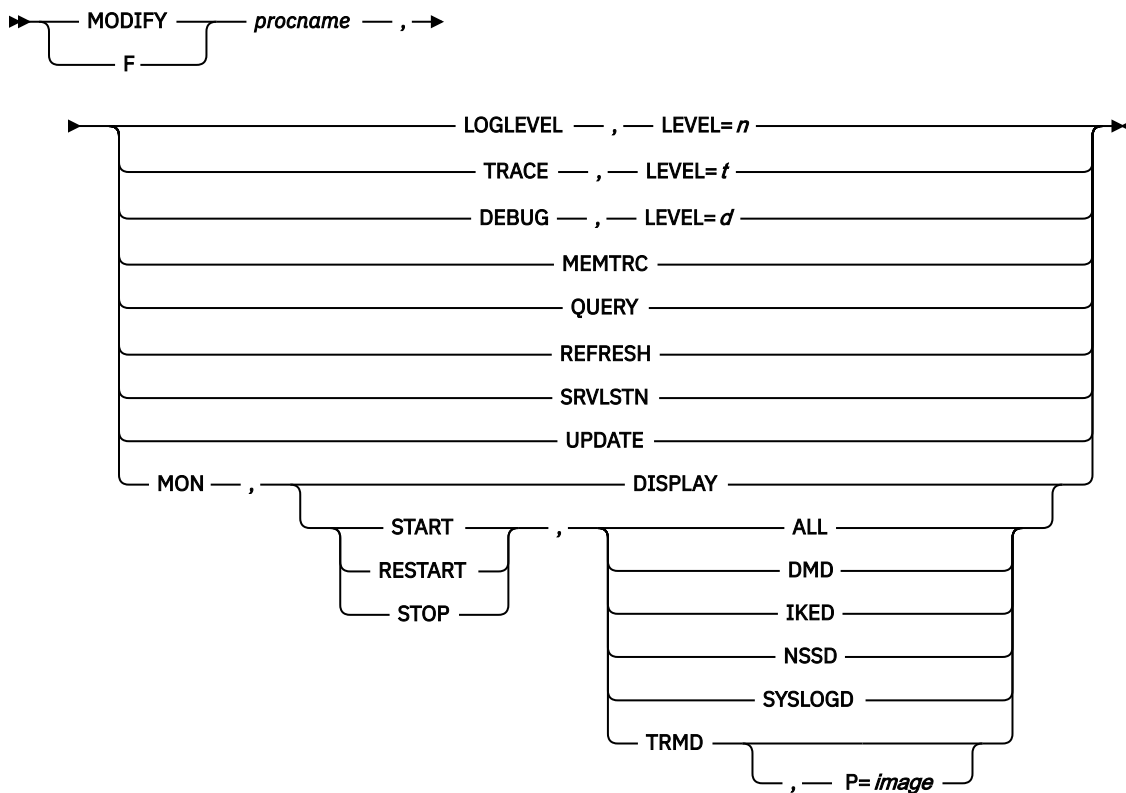

GENERIC6 options

Policy Agent

Control the Policy Agent functions from the operator's console using the MODIFY command:

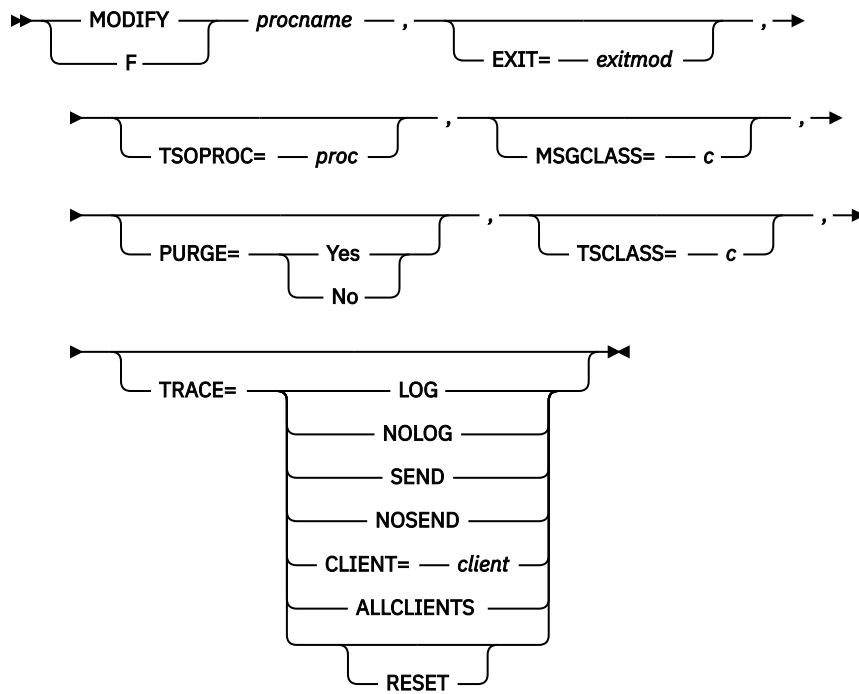

Resolver address space

Request the resolver address space to display or refresh its setup information:

REXEC server

Change the parameters on the Remote Execution server:

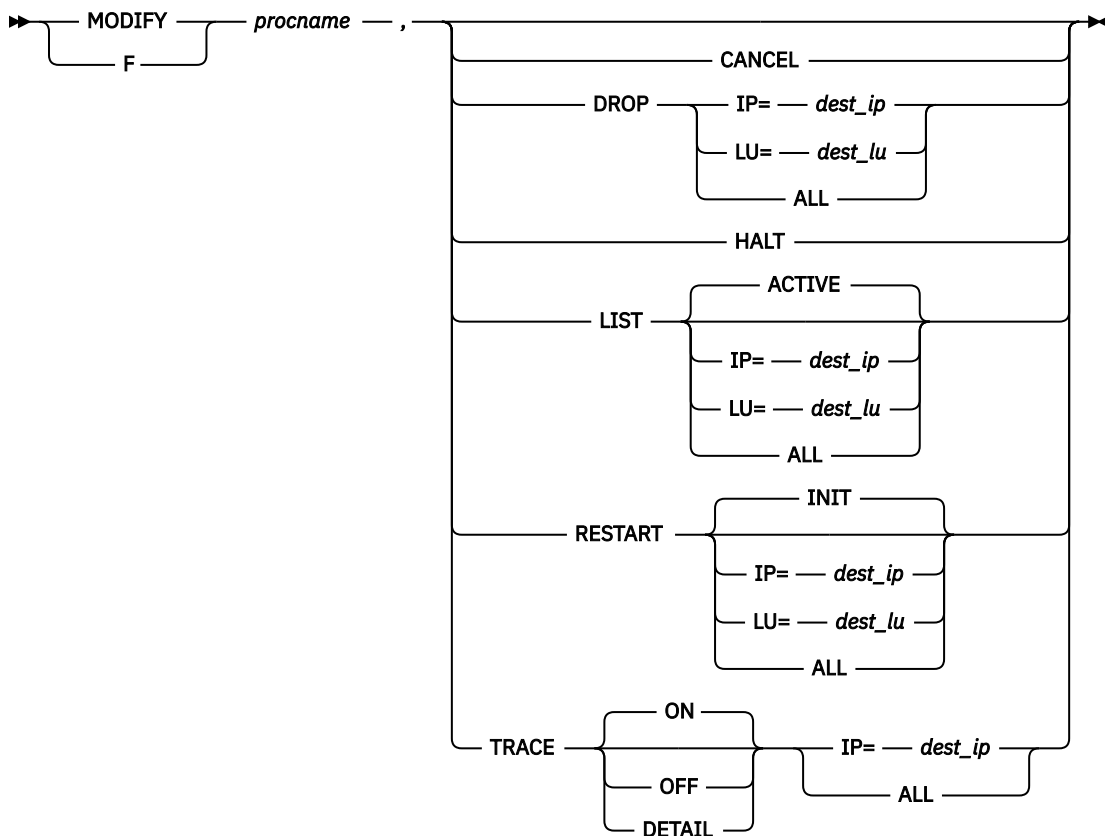

SNALINK LU0 server

Halt the SNALINK LU0 interface:

SNALINK LU6.2 server

Stop or restart the SNALINK LU6.2 interface and control tracing:

SNMP agent

Modify some SNMP agent initialization parameters:

SNMP network SLAPM2 subagent

Control the Network SLAPM2 subagent functions from the operator's console using the **MODIFY** command:

Syslog daemon

Control syslog daemon functions:

TRAPFWD

Modify the trap forwarder daemon:

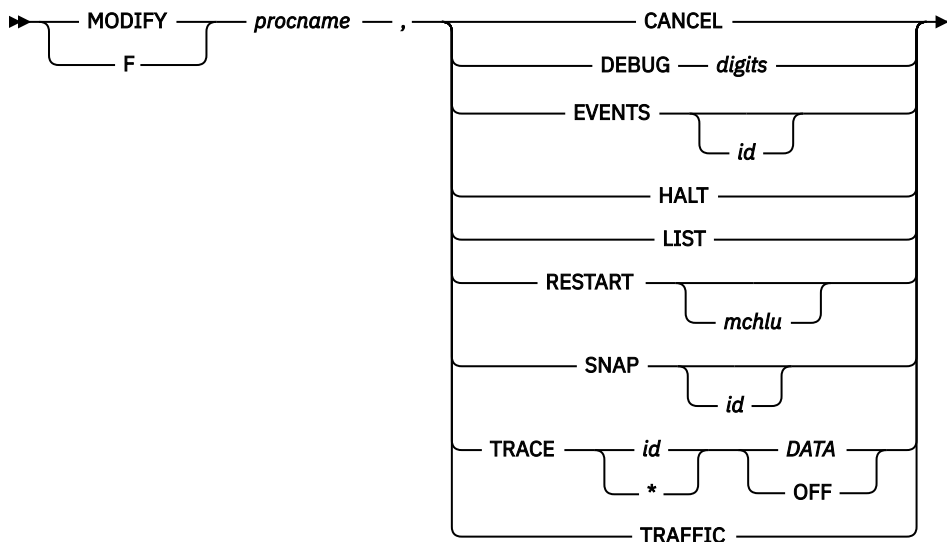

VMCF and TNF

Display the names of current users of VMCF and TNF and remove names from the name lists:

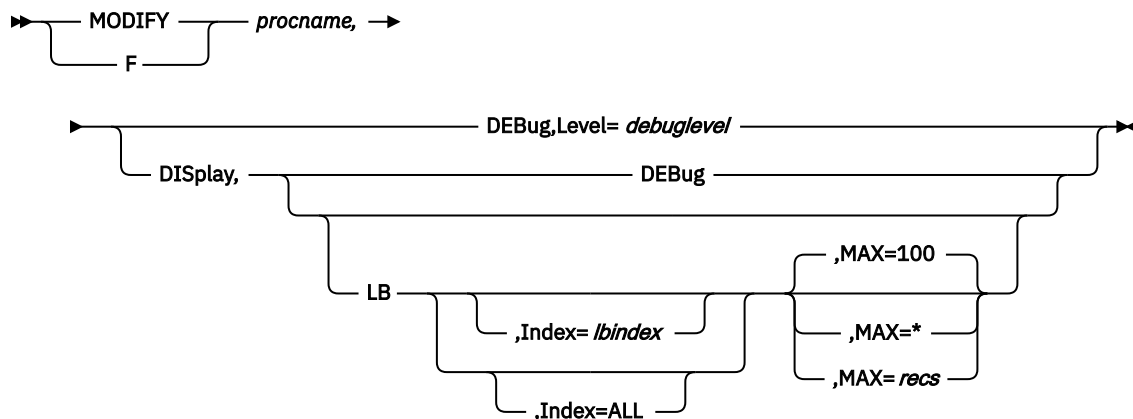

X.25 NPSI server

Pass parameters to the X.25 NPSI server:

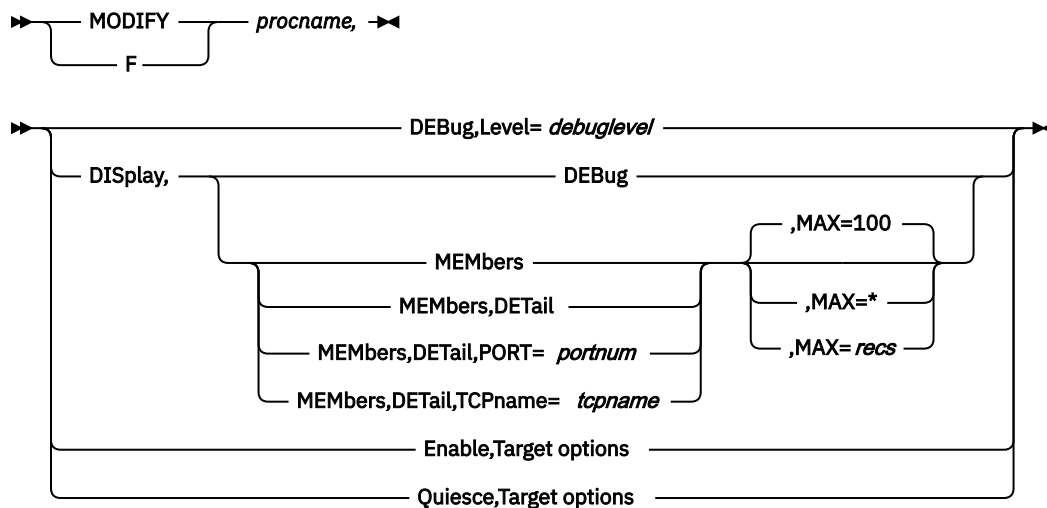

z/OS Load Balancing Advisor

Control the Load Balancing Advisor from the operator's console using the MODIFY command:

z/OS Load Balancing Agent

Control the Load Balancing Agent from the operator's console using the MODIFY command:

Target options

START TCPIP

Dynamically start a TCP/IP server or address space (including the TCP/IP address space):

STOP TCPIP

Stop a TCP/IP server or address space (including the TCP/IP address space) that is in execution:

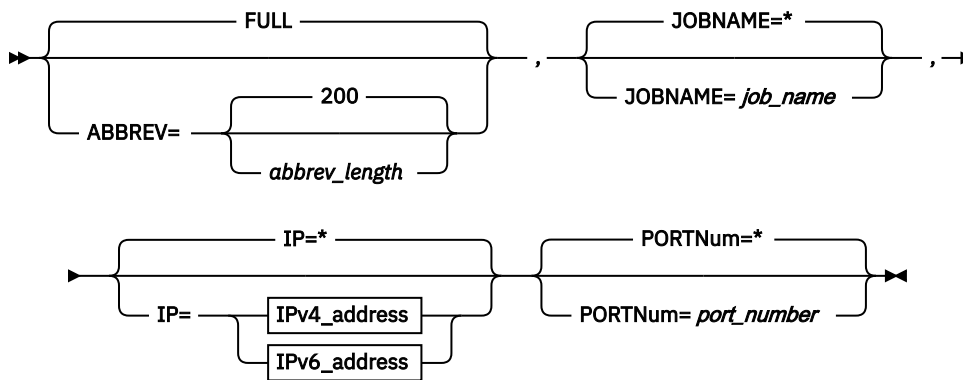

VARY TCPIP DATTRACE

Trace socket data (transforms) into and out of the physical file structure (PFS):

TRACE

IPv4_address

IPv6_address

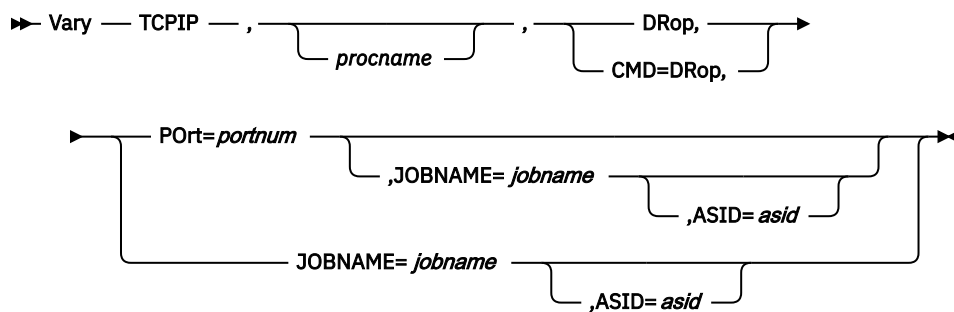

VARY TCPIP DROP

Drop a single connection:

Drop all TCP connections associated with a TCP/IP server:

VARY TCPIP EXPORTPROF

Export a TCP/IP stack profile for use with the IBM Configuration Assistant for z/OS Communications Server:

VARY TCPIP OBEYFILE

Change the TCP/IP configuration:

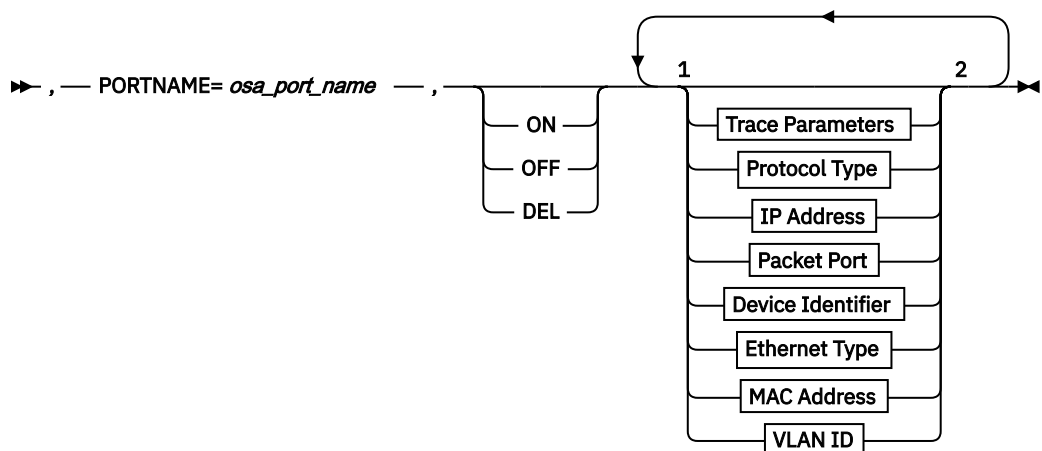

VARY TCPIP OSAENTA

Set up OSAENTA tracing:

Command

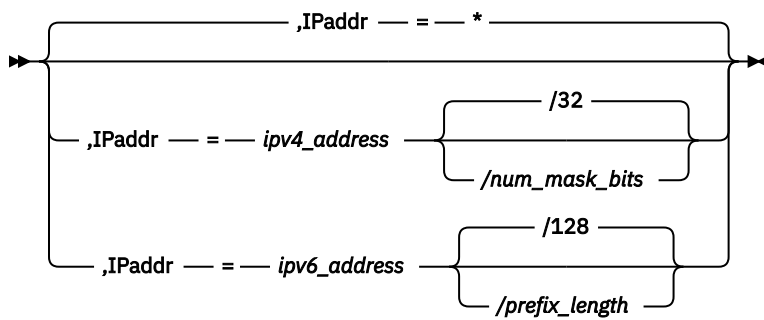

Trace Parameters

Protocol Type

IP Address

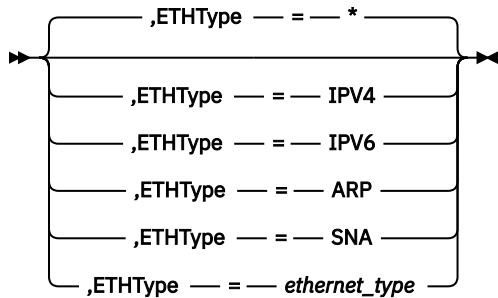

Packet Port

Device Identifier

Ethernet Type

MAC Address

VLAN ID

Notes:

¹ Each option can be specified only once. The order of options is not important.

² You must also issue the MVS TRACE command for component SYSTCPOT to activate the OSAENTA trace. See the [z/OS Communications Server: IP Diagnosis Guide](#) for details.

VARY TCPIP PKTTRACE

Set up packet tracing:

Command

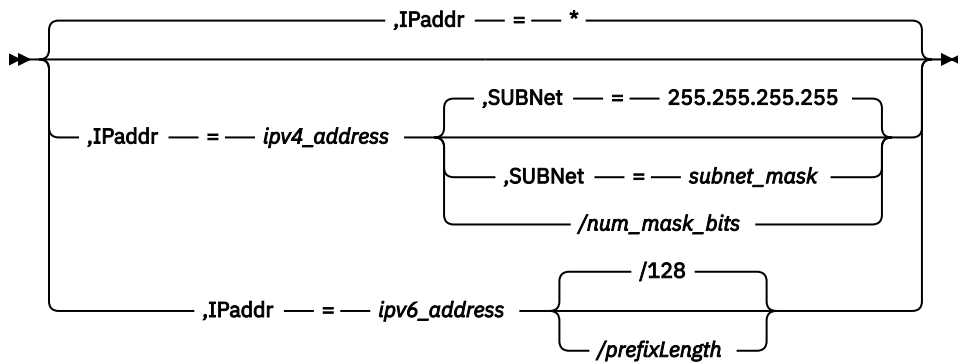

Packet Length

Protocol Type

Packet Dest Address

Packet Source Port

Packet Dest Port

Packet Port Number

Packet Discard Code

Notes:

¹ Each option can be specified only once. The order of options is not important.

² The MVS TRACE command must also be issued for component SYSTCPDA to activate the packet trace. See the [z/OS Communications Server: IP Diagnosis Guide](#) for details.

VARY TCPIP PURGECACHE

Delete the ARP cache entries for a link or neighbor cache entries for an interface:

```

➔ Vary TCPIP , procname , PURGECache, name ➔

```

VARY TCPIP SMCAT

Use the VARY TCPIP,SMCAT command to control the SMC Applicability Tool (SMCAT).

```

➔ Vary TCPIP , procname , SMCAT, datasetname ➔
                        OFF

```

VARY TCPIP START

Start a TCP/IP device or interface:

►► Vary — TCPIP — , — *procname* — , — STArt — *,device_name* — *,interface_name* —►◄

VARY TCPIP STOP

Stop a TCP/IP device or interface:

►► Vary — TCPIP — , — *procname* — , — STOp — *,device_name* — *,interface_name* —►◄

VARY TCPIP SYNTAXCHECK

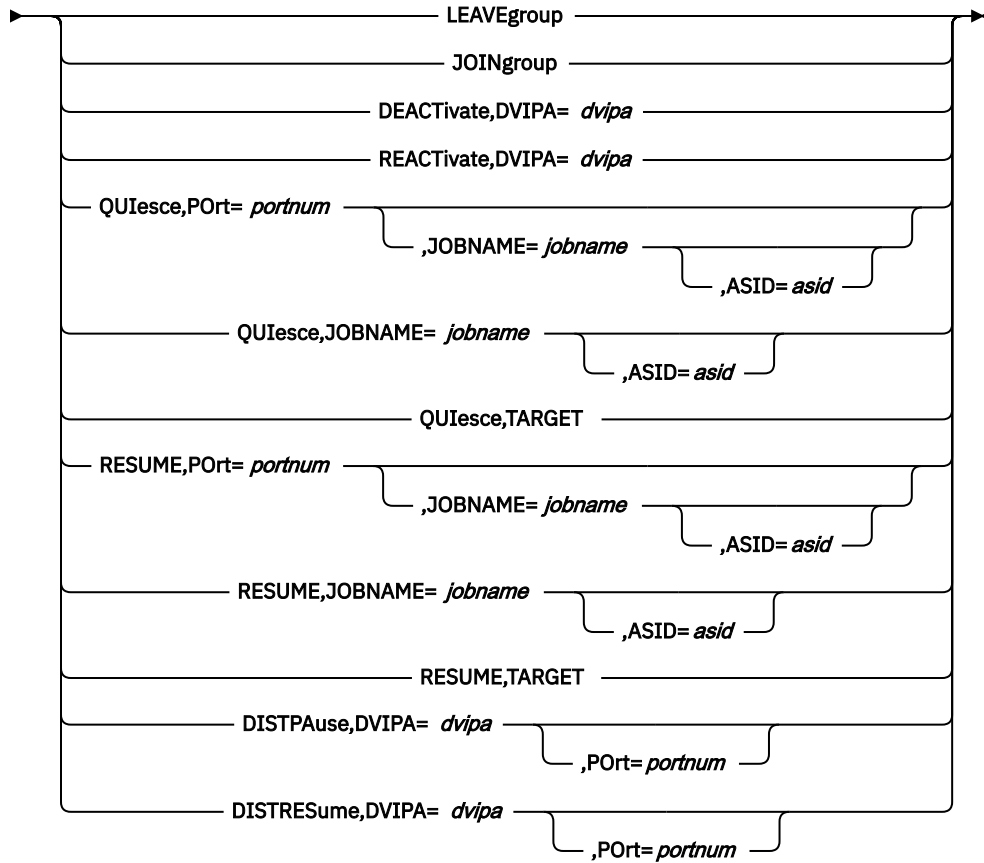

Check the syntax of TCP/IP configuration statements:

►► Vary — TCPIP — , — *procname* — ,SYNTAXCHECK — , — *datasetname* —►◄

VARY TCPIP SYSPLEX

Change the TCP/IP stack's sysplex configuration:

➤ Vary — TCPIP — , *procname* — , — SYSplex, →

VARY TCPIP TELNET

Obtain abend dumps based on a return code being set in a given module:

➤ Vary — TCPIP — ,*tnproc* — ,Telnet — ,ABENDTRAP — ,*modname* →

Disable Telnet traces:

➤ Vary TCPIP — ,*tnproc* — ,Telnet — ,DEBUg — ,OFF →

Activate a Telnet LU:

➤ Vary TCPIP — ,tnproc — ,Telnet — ,ACT — ,luname ➤

Deactivate a Telnet LU:

➤ Vary TCPIP — ,tnproc — ,Telnet — ,INACT — ,luname ➤

Quiesce a Telnet port:

➤ Vary TCPIP — ,tnproc — ,Telnet — ,QUIEsce — ,PORT=ALL — ,PORT= num — ,PORT= num1..num2 — ,PORT=Basic — ,PORT=Secure ➤

Resume a Telnet port:

➤ Vary TCPIP — , — tnproc — , — Telnet — , — RESUME — ,PORT=ALL — ,PORT= num — ,PORT= num1..num2 — ,PORT=Secure — ,PORT=Basic ➤

Stop a Telnet port:

➤ Vary TCPIP — ,tnproc — ,Telnet — ,STOp — ,PORT=ALL — ,PORT= num — ,PORT= num1..num2 — ,PORT=Secure — ,PORT=Basic ➤

Activate a LUNS LU:

➤ Vary TCPIP — ,tnproc — ,LUNS — ,ACT — ,luname ➤

Deactivate a LUNS LU:

➤ Vary TCPIP — ,tnproc — ,LUNS — ,INACT — ,luname ➤

Quiesce a LUNS:

➤ Vary TCPIP — ,tnproc — ,LUNS — ,QUIesce ➤

Resume a LUNS:

➤ Vary TCPIP — ,tnproc — ,LUNS — ,RESUME ➤

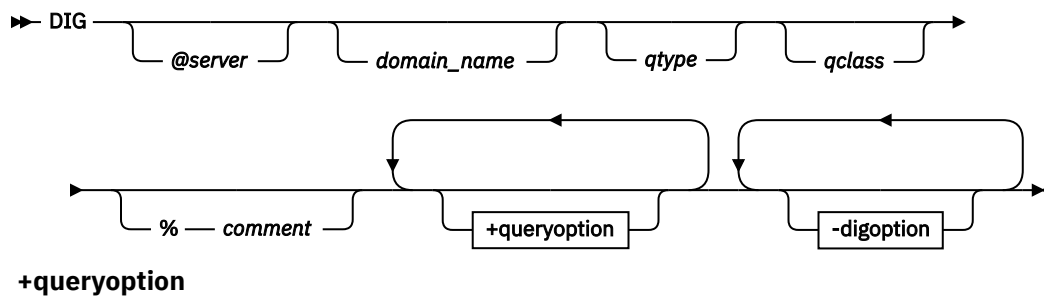

Start a LUNS:

➤ Vary TCPIP — ,tnproc — ,LUNS — ,STAr ➤

FTP command

Enter the FTP environment

The following sections describe the syntax for FTP subcommands. You must be in the FTP environment to use the FTP subcommands.

ACCT subcommand

Supply account information

➤ ACct — *account_information* ➤

APPEND subcommand

Append a local data set

➤ APpend — *local_data_set* — *destination_file* ➤

ASCII subcommand

Change the data transfer type to ASCII

➤ ASCII ➤

Auth subcommand

Negotiate a security mechanism for the session

➤ Auth — *security_mechanism* ➤

BIG5 subcommand

Change the data transfer type to BIG5:

BINARY subcommand

Change the data transfer type to Image

➤ BINARY ➤

BLOCK subcommand

Set the block data transfer mode

➤ BLOCK ➤

CCC subcommand

Change control connection protection to clear

➤ CCC ➤

CD subcommand

Change the directory on the remote host:

➤ CD — *directory* ➤

CDUP subcommand

Change to the parent of the working directory:

➤ CDUp ➤

CLEAR subcommand

Change control connection protection to clear:

➤ CLEar ➤

CLOSE subcommand

Disconnect from a remote host:

➤ CLoSe ➤

COMPRESS subcommand

Set the compressed data transfer mode:

➤ COMpress ➤

CPROTECT subcommand

Change or display control connection protection:

➤ CProtect — [*protection-level*] ➤

DEBUG subcommand

Set internal debug options:

DELETE subcommand

Delete files:

➤ **DELEte** — *foreign_file* ➤

DELIMIT subcommand

Display the file name delimiter:

➤ **DELImit** ➤

DIR subcommand

Obtain a list of directory entries:

➤ **DIr** — *name* (— **DISK** ➤

DUMP subcommand

Sets the internal extended trace options:

EBCDIC subcommand

Change the data transfer type to EBCDIC:

➤ EBCdic ➤

EUCKANJI subcommand

Change the data transfer type to EUCKANJI:

FEATURE subcommand

Ask the server which features and extensions it supports:

➤ FEature ➤

FILE subcommand

Set the file structure to file

➤ File ➤

GET subcommand

Copy files:

GLOB subcommand

Toggle expansion of metacharacters

➤ GLOB ➤

HANGEUL subcommand

Change the data transfer type to HANGEUL:

HELP and ? subcommands

Display help information:

IBMKANJI subcommand

Change the data transfer type to IBMKANJI:

JIS78KJ subcommand

Change the data transfer type to JIS78KJ:

JIS83KJ subcommand

Change the data transfer type to JIS83KJ:

KSC5601 subcommand

Change the data transfer type to KSC-5601:

LANGuage subcommand

Request server replies in another language, or reset language to the default:

LCD subcommand

Change the local working directory

LMKDIR subcommand

Create a directory on the local host

➤ LMKdir — *directory* — (— like — *remote_directory* —) ➤

LOCSITE subcommand

Specify site information to the local host:

➤ LOCSite — option ➤

options

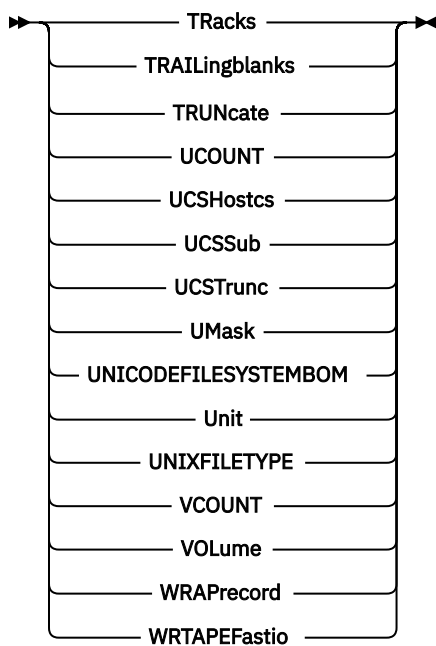

LOCSTAT subcommand

Display local status information:

►► LOCStat — option ◄◄

LPWD subcommand

Display the current working-level qualifier:

➤ LPwd ➤

LS subcommand

Obtain a list of file names:

➤ LS — *name* (— Disk —) ➤

MDELETE subcommand

Delete multiple files:

➤ MDelete — *foreign_file* ➤

MGET subcommand

Copy multiple files:

➤ MGet — *foreign_file* (— REPLACE —) ➤

MKDIR subcommand

Create a directory on the remote host:

MKFIFO subcommand

Create a named pipe on the remote host:

MODE subcommand

Set the data transfer mode:

MPUT subcommand

Copy multiple data sets to the remote host:

MVSGET subcommand

Copy remote data set into local data set with remote data set attributes.

MVSPUT subcommand

Copy local data set into remote data set with local data set attributes.

NOOP subcommand

Test the connection:

OPEN subcommand

Connect to the FTP server:

PASS subcommand

Supply a password:

PRIVATE subcommand

Change data connection protection to private:

PROMPT subcommand

Toggle interactive prompting for M* commands:

PROTECT subcommand

Change or display data connection protection:

PROXY subcommand

Execute FTP subcommand on secondary control connections:

PUT subcommand

Copy data sets to the remote host:

➤ PUT — *local_file* — *foreign_file* ➤

PWD subcommand

Display the current working directory:

➤ PWD ➤

QUIT subcommand

Leave the FTP environment:

➤ QUIT ➤

QUOTE subcommand

Send an uninterpreted string of data:

➤ QUOTE — *string* ➤

RECORD subcommand

Set the file structure to record:

➤ RECD ➤

RENAME subcommand

Rename files:

➤ REN — *original_name* — *new_name* ➤

RESTART subcommand

Restart a checkpointed data transfer:

➤ RESTART ➤

RMDIR subcommand

Remove a directory on the remote host:

➤ RMD — *directory* ➤

SAFE subcommand

Change data connection protection to safe:

➤ SAfe ➤

SCHINESE subcommand

Change the data transfer type to SCHINESE:

SENDPORT subcommand

Toggle the sending of port information:

➤ SENDPort ➤

SENDSITE subcommand

Toggle the sending of site information:

➤ SENDSite ➤

SITE subcommand

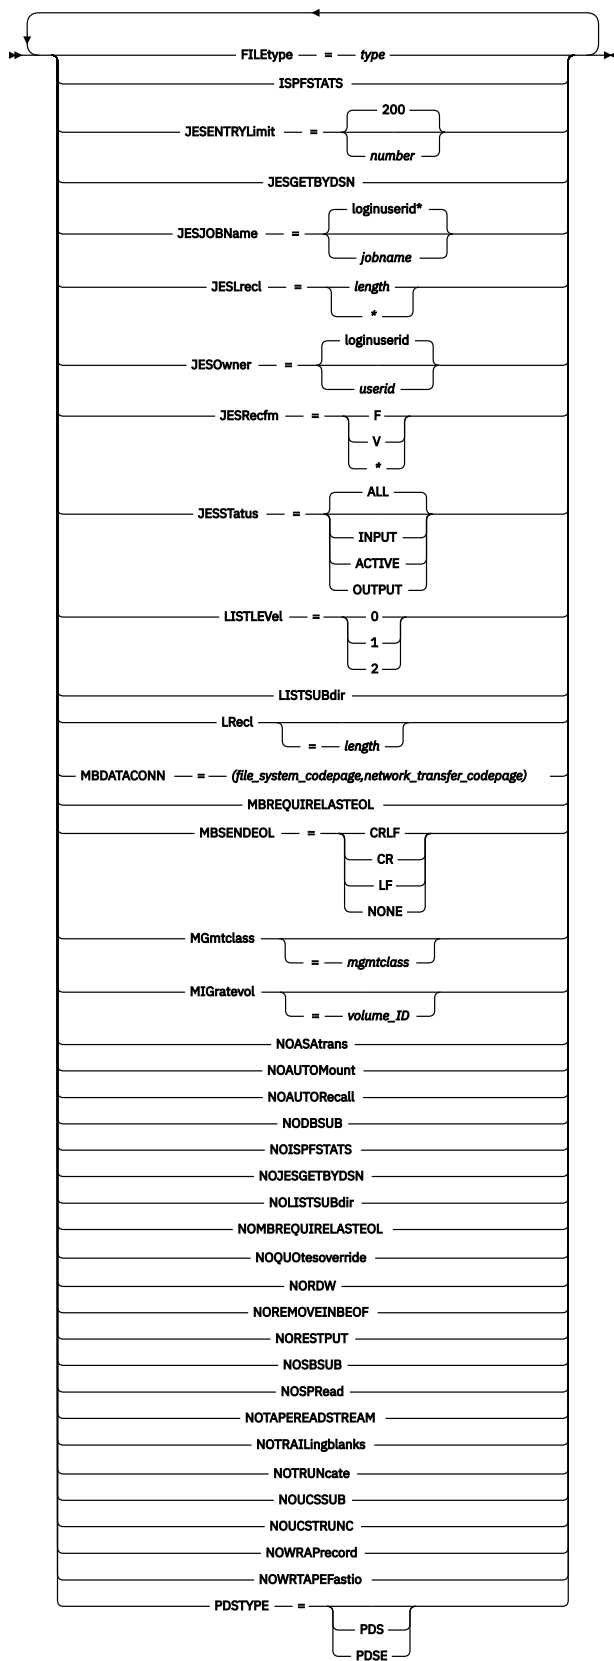

Send site specific information to a host:

➤ SItE — options ➤

options

SJISKANJI subcommand

Change the data transfer type to SJISKANJI:

STATUS subcommand

Retrieve status information from a remote host:

options

STREAM subcommand

Set the stream data transfer mode:

➤ STREam ➤

STRUCTURE subcommand

Set the file structure:

SUNIQUE subcommand

Toggle the storage method:

SYSTEM subcommand

Display the operating system name:

➤ SYstem ➤

TCHINESE subcommand

Change the data transfer type to TCHINESE:

TSO subcommand

Use TSO commands:

➤ TSO — *command_line* ➤

TYPE subcommand

Set the data transfer type:

UCS2 subcommand

Change data transfer type to unicode UCS-2:

USER subcommand

Identify yourself to a host or change your TSO user ID password:

Where Password is

GDDMXD command

Invoke the GDDMXD CLIST command:

The following sections describe the syntax for GDDMXD command options.

Identifying the target display option

ANFontn option

Specify the X Window System font used for characters in the alphanumeric presentation space:

CMap option

Specify whether the default color map is loaded or bypassed:

Compr option

Control the technique used to compress bit-mapped data:

Enter option

Override the default key mapping for enter:

►► `gddmx*Enter` — : — *keysym_name* ►◄

GColornn option

Specify a color name:

►► `gddmx*GColor` — *nn* — : — *c* ►◄

Geometry option

Specify the size and location of the initial GDDMXD graphics presentation space:

►► `gddmx*Geometry` — : — *width* — * — *height* — + — *x_offset* — + — *y_offset* ►◄

GMCPnn option

Override GDDM® multicolor patterns with workstation color names:

►► `gddmx*GMCP` — *nn* — : — *c* ►◄

HostRast option

Perform Raster image processing at the System/370 host:

NewLine option

Override the default key mapping for NewLine:

►► `gddmx*NewLine` — : — *keysym_name* ►◄

XSync option

Request that the X Window System process one request at a time:

ZWL option

Tell GDDMXD/MVS to draw all lines using 0-width lines:

HOMETEST command

Verify your host name and address configuration:

KDESTROY command

Delete Kerberos ticket data sets:

KINIT command

Connect to the Kerberos system:

KLIST command

Display your current tickets:

KPASSWD command

Change your password:

LPQ command

Request a list of the printer queue on a remote printer:

Opt Parm 1:

Opt Parm 2:

LPR command

Print to a remote printer:

Optional parameters

More optional parameters

LPRM command

Remove a job from the printer queue on a remote host:

Opt Params 1:

Opt Params 2:

LPRSET command

Set the default printer and host name:

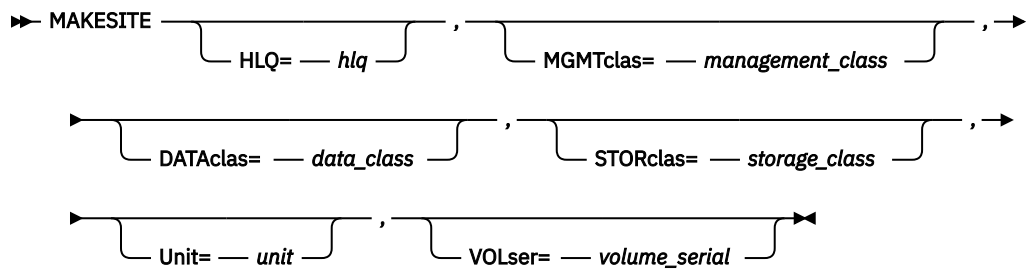

Optional Parameters:

MAKESITE command

Generate new hlq.HOSTS.SITEINFO and hlq.HOSTS.ADDRINFO data sets:

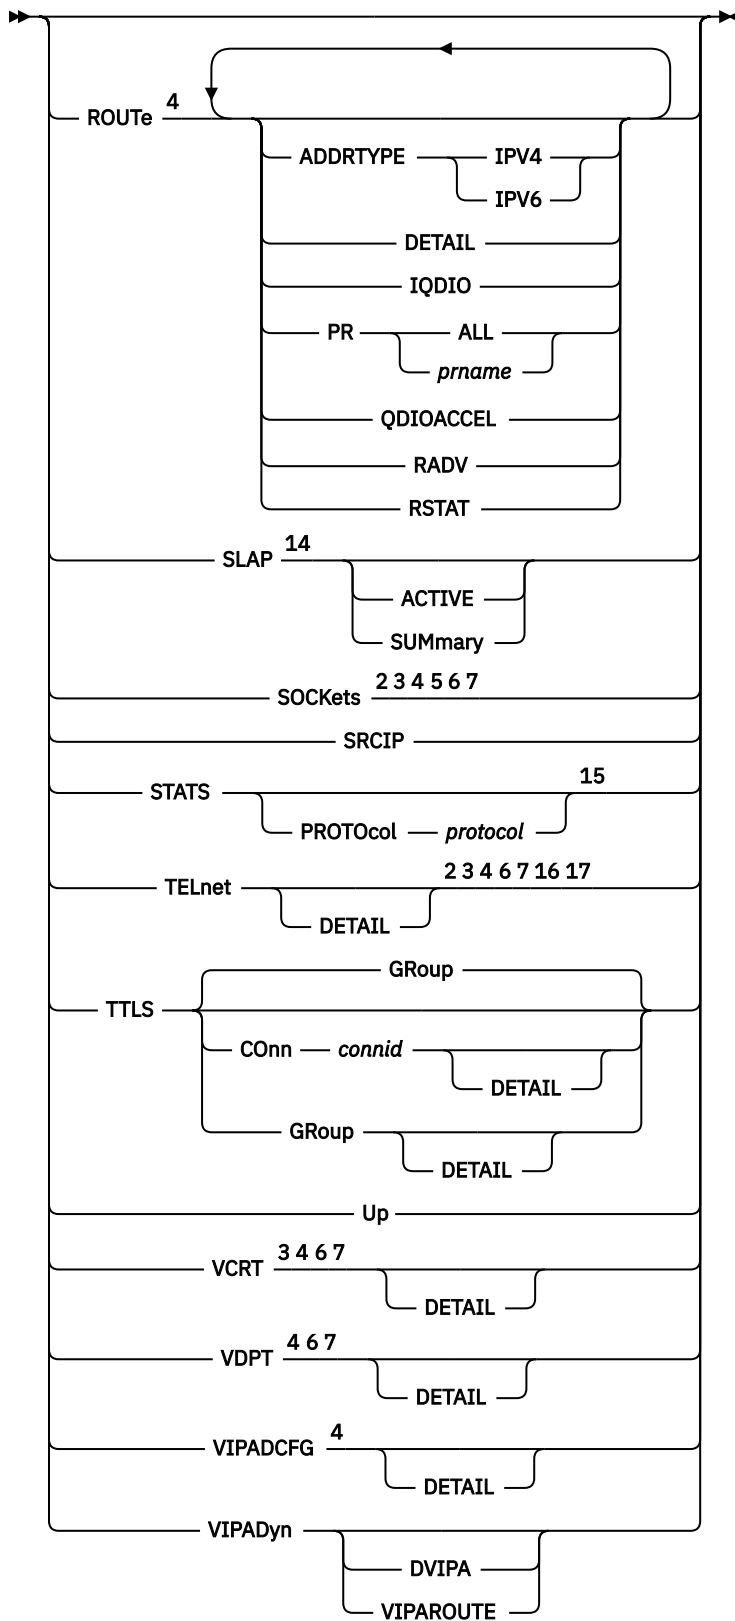

NETSTAT command

Use the TSO NETSTAT command to display the network configuration and status on a local TCP/IP stack:

Report Option

Command

➤ DRep — *n* ➤

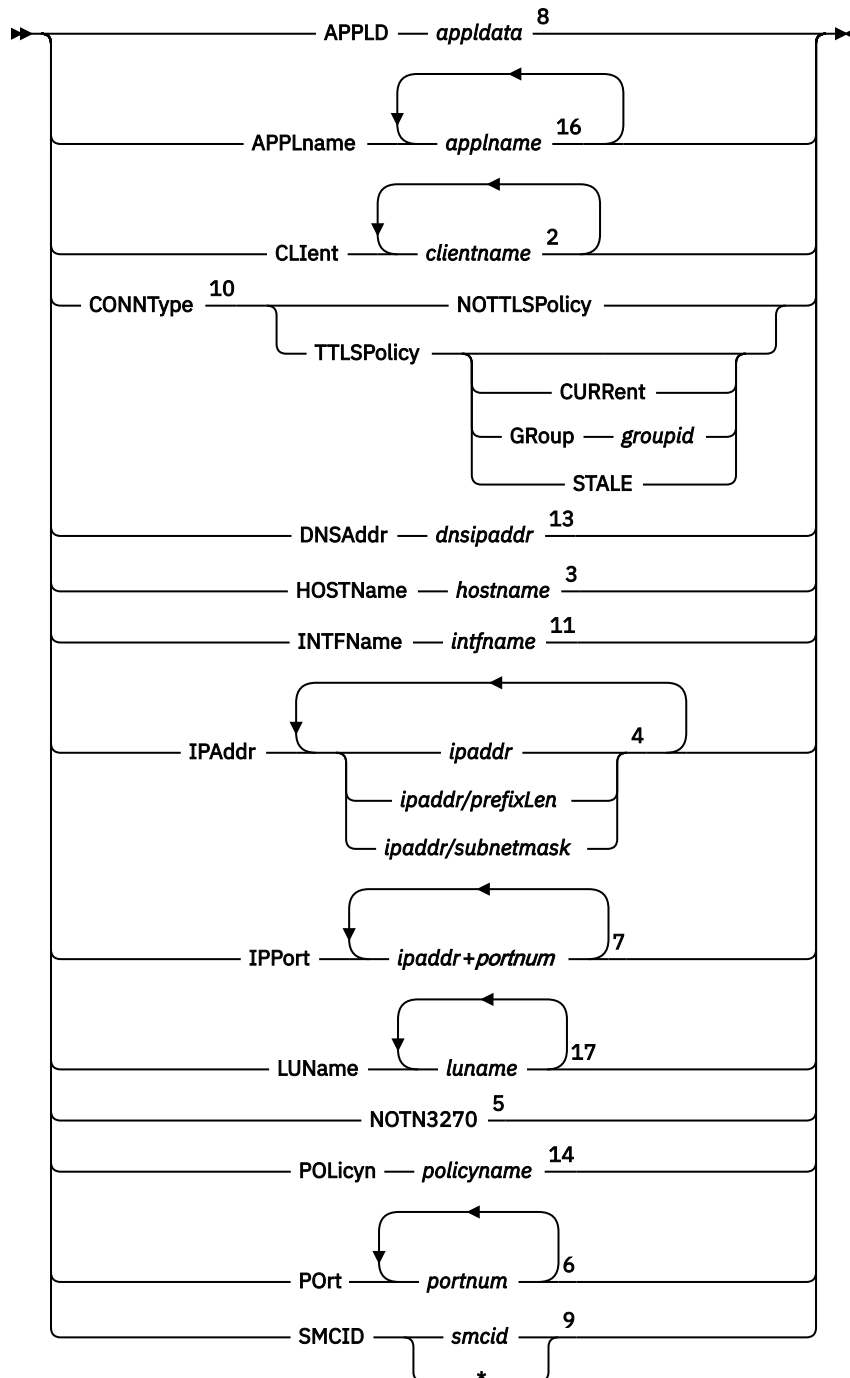

Target

➤ TCp — *tcpname* ➤

Output

Filter

Notes:

- ¹ The minimum abbreviation for each parameter is shown in uppercase letters.
- ² The CLient filter is valid with ALL, ALLConn, BYTEinfo, Conn, CLients, SOCKets, and TELnet.
- ³ The HOSTName filter is valid only with ALL, ALLConn, BYTEinfo, Conn, RESCache, SOCKets, TELnet, and VCRT.
- ⁴ The IPAddr filter is valid only with ALL, ALLConn, BYTEinfo, Conn, Gate, ND, RESCache, ROUTe, SOCKets, TELnet, VCRT, and VDPT, and VIPADCFG.
- ⁵ The NOTN3270 filter is valid only with ALL, ALLConn, BYTEinfo, Conn, CLients, and SOCKets.
- ⁶ The Port filter is valid only with ALL, ALLConn, Conn, PORTList, SOCKets, TELnet, VCRT, and VDPT.
- ⁷ The IPPort filter is valid only with ALL, ALLConn, Conn, SOCKets, TELnet, VCRT, and VDPT.
- ⁸ The APPLD filter is valid only with ALL, ALLConn, and Conn.
- ⁹ The SMCID filter is valid only with ALL, ALLConn, Conn, and DEvlinks.
- ¹⁰ The CONNType filter is valid only with ALLConn and Conn.
- ¹¹ The INTFName filter is valid only with DEvlinks and HOme.
- ¹² The valid protocol values are TCP and UDP.
- ¹³ The DNSAddr filter is valid only with RESCache.
- ¹⁴ The POLicyn filter is valid only with SLAP.
- ¹⁵ The valid protocol values are IP, ICMP, TCP, and UDP.
- ¹⁶ The APPLName filter is valid only with TELnet.
- ¹⁷ The LUName filter is valid only with TELnet.

NSLOOKUP command

Query a name server in command mode:

Issue queries to name servers in interactive mode:

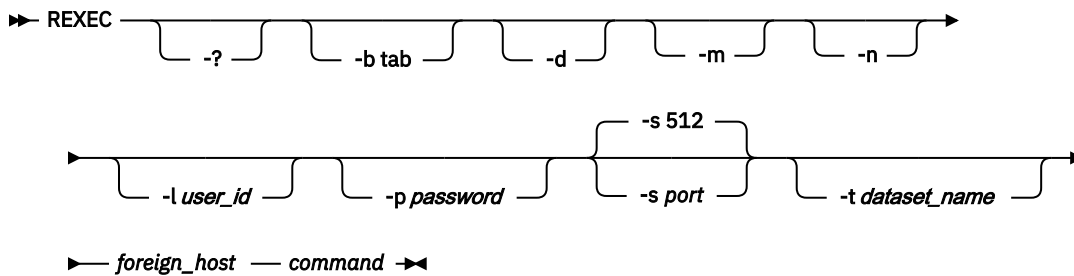

SubCommand

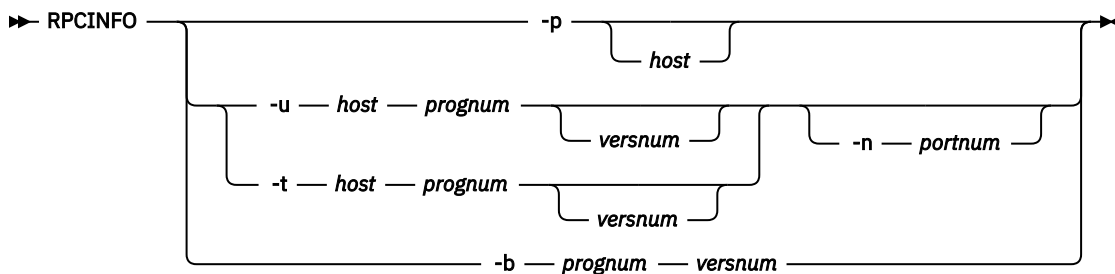

REXEC command

Send a command to the remote host and receive the results on your local host:

RPCINFO command

Display server information:

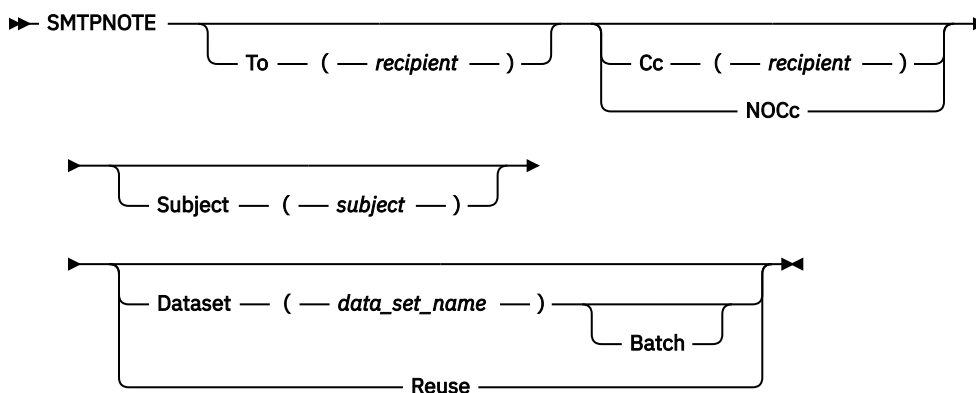

RSH command

Send a command to the remote host and receive the results on your local host:

SMTPNOTE command

Send electronic mail to one or more recipients on NJE or TCP networks:

TELNET command

The following sections describe the syntax for TELNET command options:

AO option

Terminate output display:

AYT option

Query the connection:

➤ AYT ➤

BRK option

Send the break or attention keystroke to a host:

➤ Brk ➤

HELP option

Display help information:

➤ Help ➤
?

IP option

Interrupt the process:

➤ Ip ➤

PA1 option

Send the PA1 keystroke to a host:

➤ Pa1 ➤

QUIT option

End the telnet session:

➤ Quit ➤

SYNCH option

Clear the data path:

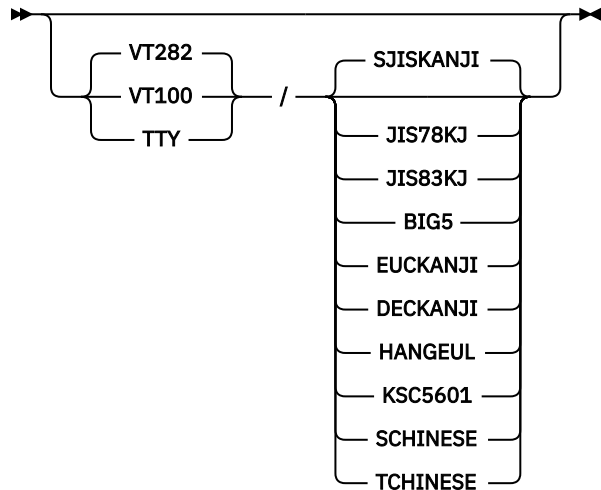

➤ Synch ➤

¢ and ` options

Send ASCII control characters to a host in line mode:

➤ ¢ control_character ➤
`

Terminal and conversion type option

TESTSITE command

Verify hlq.HOSTS.ADDRINFO and hlq.HOSTS.SITEINFO data sets correctly resolve the name of a host, gateway, or net:

➤ TESTSITE ➤

TRACERTE command

Debug network problems:

Options

z/OS UNIX commands

dig command

Gather information from the Domain Name System servers:

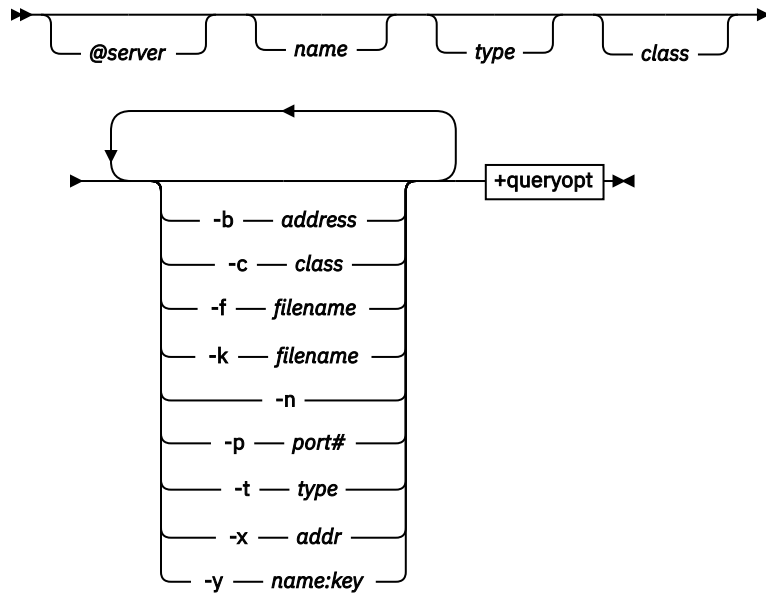

Command Line Mode

Multiple Query Mode

query

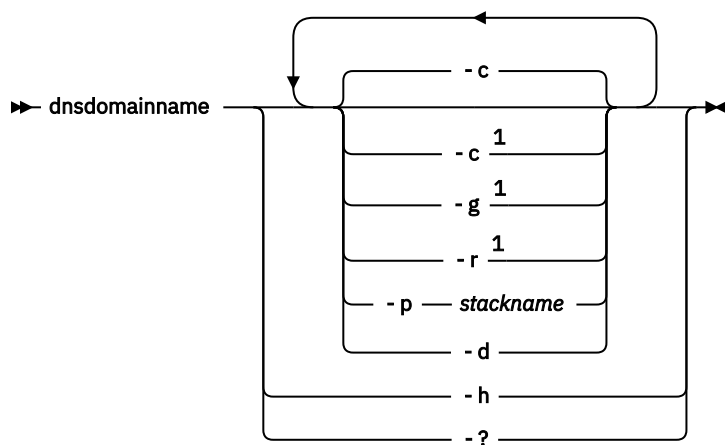

+queryopt or +global_queryopt

dnsdomainname command

Display the DNS domain name of the system:

Notes:

¹ Only one of the `-c`, `-g`, and `-r` parameters can be specified.

ftp command

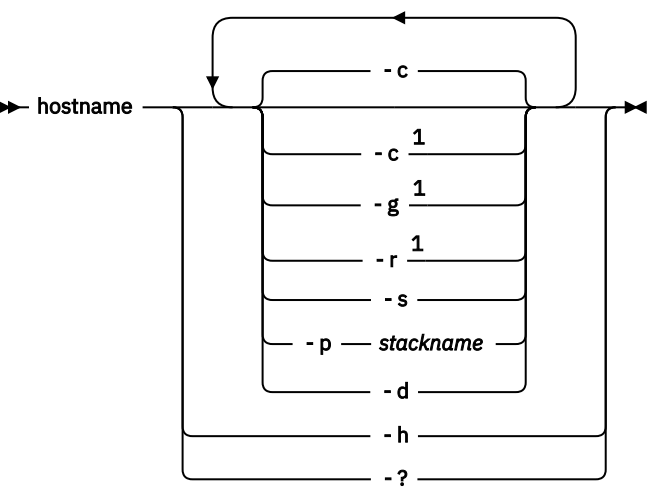

host command

Identify the IP addresses associated with a specified DNS host name or identify the DNS host names associated with a specified IP address:

➡ `host` — *host* ➡

hostname command

Display the fully qualified DNS hostname of the local system:

Notes:

¹ Only one of the `-c`, `-g`, and `-r` parameters can be specified.

ipsec command

Display and modify IP security information on the local host:

Primary Option

Global Option

 SHORT —

Filter

Notes:

- ¹ -B filter is valid only with -A, -a, -c, -s, -t, -O, and -V.
- ² -E filter is valid only with -A, -a, -b, -c, -e, -s, and -t.
- ³ -H filter is valid only with -A, -a, -b, -c, -q, -s, -t, and -V.

- ⁴ -I filter is valid only with -A, -a, -b, -c, -F, -g, -n, -O, -q, -r, -s, -t, and -V.
- ⁵ -P filter is valid only with -A, -a, -c, -O, -o, -s, -t, and -V.
- ⁶ -T filter is valid only with -A, -a, -b, -c, -e, and -s.
- ⁷ -G filter is valid only with -A, -a, and -c.
- ⁸ -U filter is valid only with -A, -a, -c and -d.
- ⁹ -X filter is valid only with -a, and -c.
- ¹⁰ -K filter is valid only with -d and -h.
- ¹¹ -Y filter is valid only with -j.
- ¹² The valid protocol values are TCP, and UDP.
- ¹³ -Q filter is valid only with -q.
- ¹⁴ The valid protocol values are ICMP, IP, TCP, and UDP.
- ¹⁵ -N filter is valid only with -t.
- ¹⁶ -L filter is valid only with -t.

nssctl command

The z/OS UNIX nssctl command is used to display information for NSS clients that are currently connected to the local NSS server.

Primary Option

Filter Option

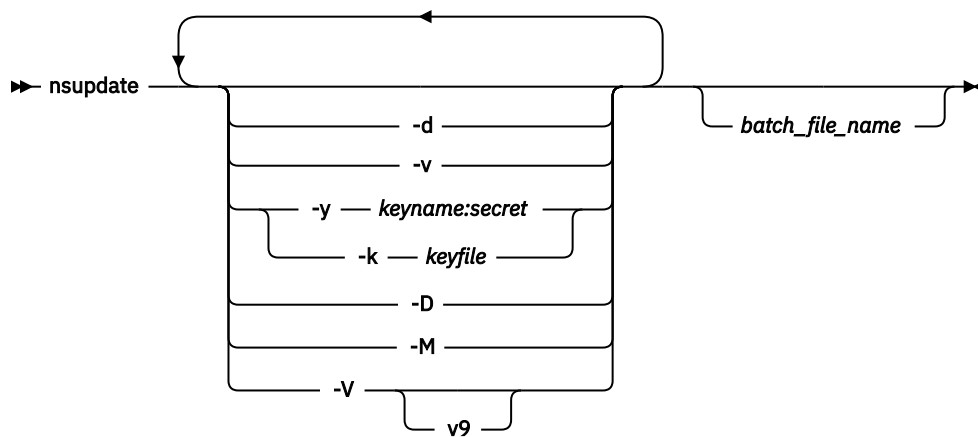

Debug Option

nsupdate Command

Dynamically update a name server:

Command mode:

Subcommand mode:

Start nsupdate subcommand mode

➤ `nsupdate` — Enter ➤

Subsequent subcommand entry (valid with version 9 of nsupdate)

onslookup and nslookup command

Note: The synonym for the **onslookup** command in the z/OS UNIX shell is `nslookup`. The **nslookup** command syntax is the same as that for the **onslookup** command.

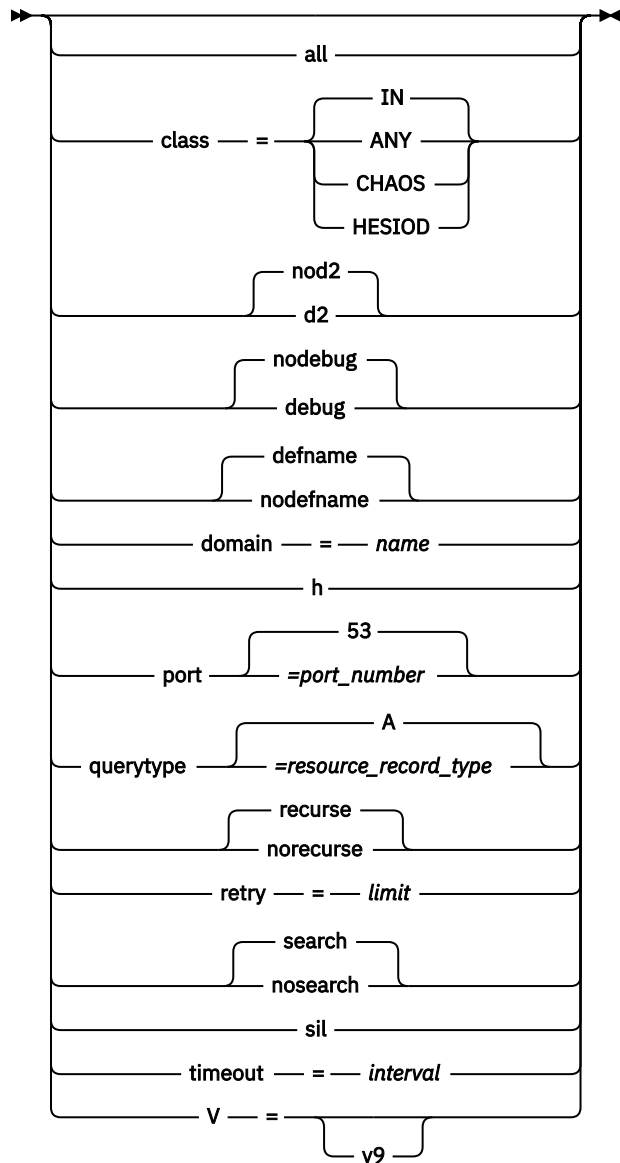

Querying a name server in command mode:

Issue multiple queries to name servers in interactive mode:

Options:

SubCommand:

ping command

Send an echo request to a foreign node (remote host) to determine whether the node is accessible:

Note: The synonym for the **oping** command in the z/OS UNIX shell is ping. The **oping** command syntax is the same as that for the **ping** command.

Option

orexec and rexec commands

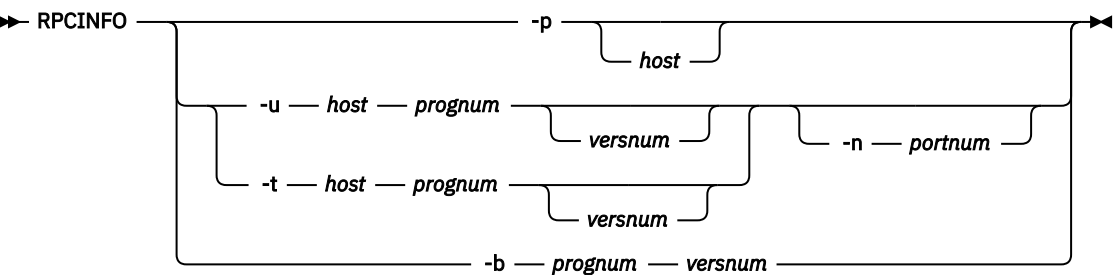

Execute a command on the remote host:

Note: The synonym for the **orexec** command in the z/OS UNIX shell is **rexec**. The **rexec** command syntax is the same as that for the **orexec** command.

orpcinfo and rpcinfo commands

Display server information:

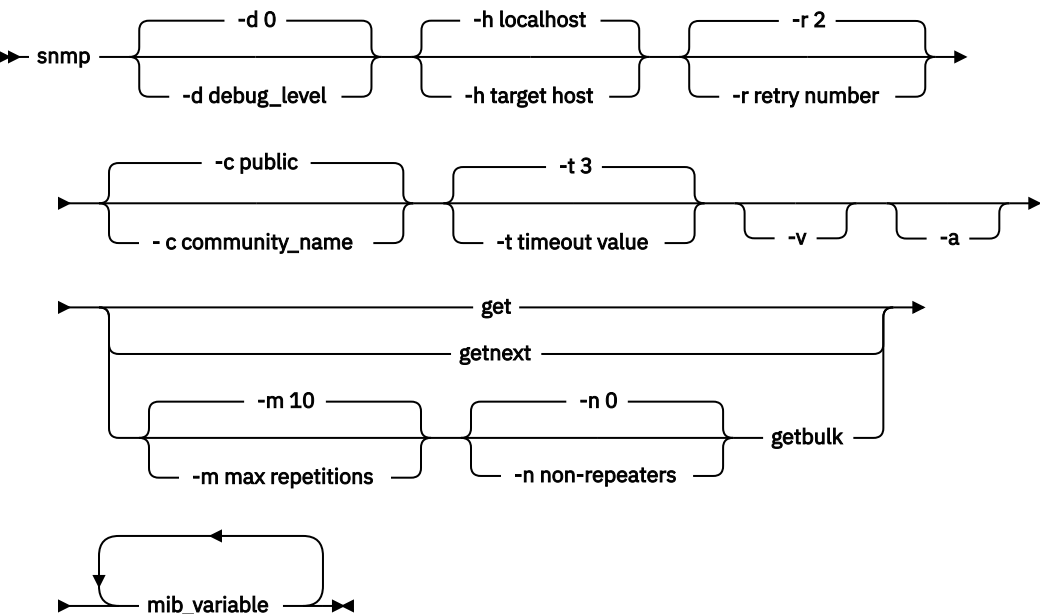

Note: The synonym for the **orpcinfo** command in the z/OS UNIX shell is **rpcinfo**. The **rpcinfo** command syntax is the same as that for the **orpcinfo** command.

snmp command

Note: The synonym for the **osnmp** command in the z/OS UNIX shell is **snmp**. The **snmp** command syntax is the same as that for the **osnmp** command.

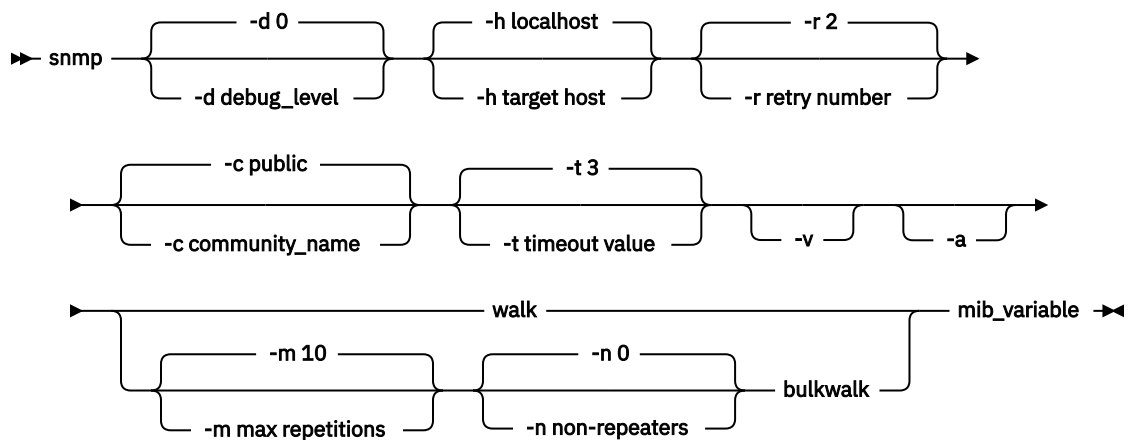

Get MIB variables:

Set the MIB variables:

Walk the MIB tree:

Displaying **osnmp** help:

```
snmp -? ->
```

Receive a trap:

Finding a MIB variable name:

traceroute command

Debug network problems:

Note: The synonym for the **otracert** command in the z/OS UNIX shell is traceroute. The **traceroute** command syntax is the same as that for the **otracert** command.

Options

pasearch command

Query information from the Policy Agent (Pagent):

Option

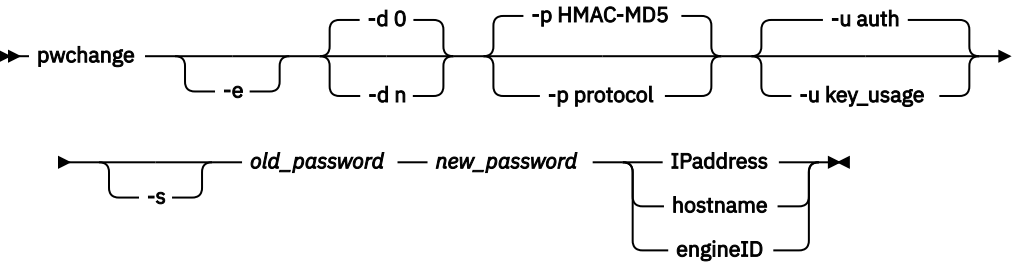

popper command

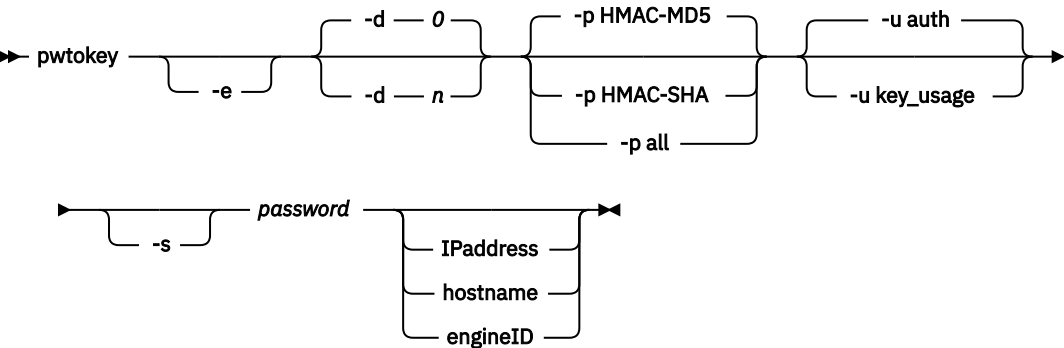

pwchange command

Generate hexadecimal encryption key to update password for SNMP use:

pwtokey command

Convert password into hexadecimal encryption key for SNMP or OMPROUTE use:

trmdstat command

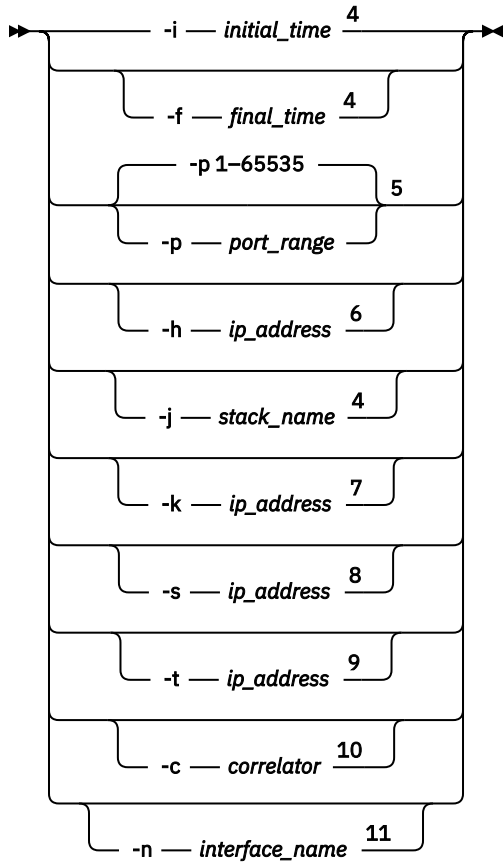

Report Option

Report Content

Filter

Global

Notes:

- ¹ Valid only when -A/-C/-F/-G/-N/-Q/-T/-U is specified.
- ² Valid only when -T is specified.
- ³ Valid only when -A/-F/-T/-U is specified.
- ⁴ Valid only when -A/-C/-F/-G/-I/-N/-Q/-T/-U is specified.
- ⁵ Valid only when -A/-C/-F/-G/-Q/-T/-U is specified except when -A -S or -F -S are specified.
- ⁶ Valid only when -A/-C/-F/-G/-N/-Q/-U is specified except when -A -S is specified.
- ⁷ Valid only when -T and -S is specified.
- ⁸ Valid only when -A/-G/-Q/-T is specified except when -A -S or -T -S are specified.
- ⁹ Valid only when -A/-G/-Q/-T is specified except when -A -S is specified.
- ¹⁰ Not valid when -S or -I is specified.
- ¹¹ Valid only when -F is specified.

Other IP commands, options, and subcommands

Table 1. IP commands, options, and subcommands

Command type	Reference
NetView SNMP (SNMP) Command	See z/OS Communications Server: IP System Administrator's Commands .
IPCS subcommands for TCP/IP	See z/OS Communications Server: IP Diagnosis Guide .
CTRACE command and options for TCP/IP	See z/OS Communications Server: IP Diagnosis Guide .

Chapter 2. VTAM commands

VTAM commands are listed in this section alphabetically.

For more information about these commands, see [z/OS Communications Server: SNA Operation](#) and [z/OS Communications Server: SNA Diagnosis Vol 1, Techniques and Procedures](#).

Operator display commands

D ADJCLUST command

Display the adjacent cluster (routing) tables and their entries in the order to be used for APPN searches:

D ADJCP command

Display the attributes of a specific adjacent node and the connections in which it is currently involved:

D ADJSSCPS command

Display user-defined and dynamic adjacent SSCP tables:

Display the adjacent SSCP table for a specific cross-domain resource:

➤➤ DISPLAY — — NET — , — ADJSSCPS — , — CDRSC — = — *cdrsc_name* ➔

Display a specific list of adjacent CDRMs used for session requests:

➤➤ DISPLAY — — NET — , — ADJSSCPS — , — ADJLIST — = — *list_name* ➔

Display all lists of adjacent CDRMs:

➤➤ DISPLAY — — NET — , — ADJSSCPS — , — ADJLIST — = — * ➔

D APING command

Test whether a route to another LU 6.2 resource or control point is available and display performance information for the route if the resource supports an APING server:

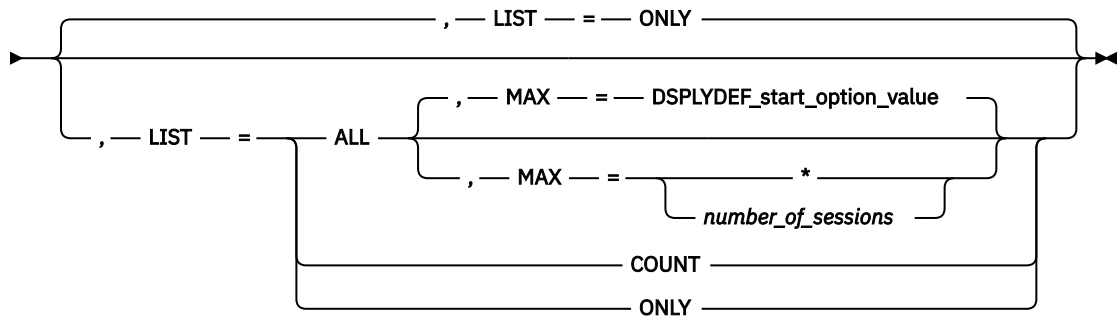

►► DISPLAY — — NET — , — APING — , — ID — = — *resource_name* →

D APINGDTP command

Display the number of APINGD transaction programs permitted to run concurrently for responding to APING requests from other nodes:

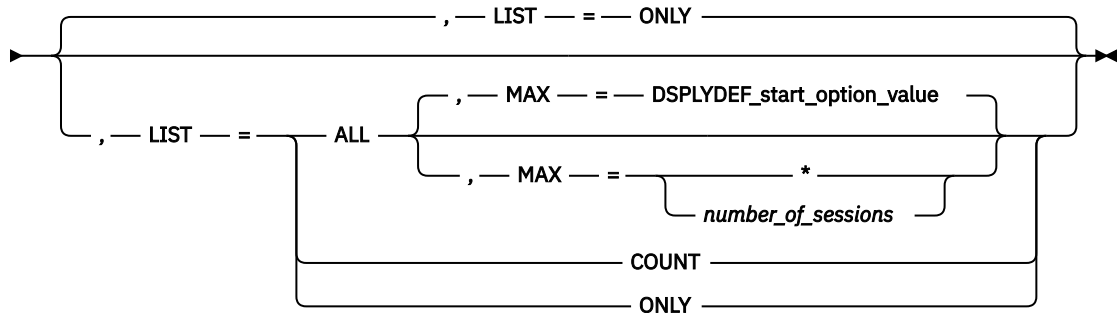

►► DISPLAY — — NET — , — APINGDTP →

D APINGTP command

Display the number of APING transaction programs permitted to run concurrently for sending APING command requests to other node; optionally, display the number of active sessions for the APINGD TP and show information about those sessions:

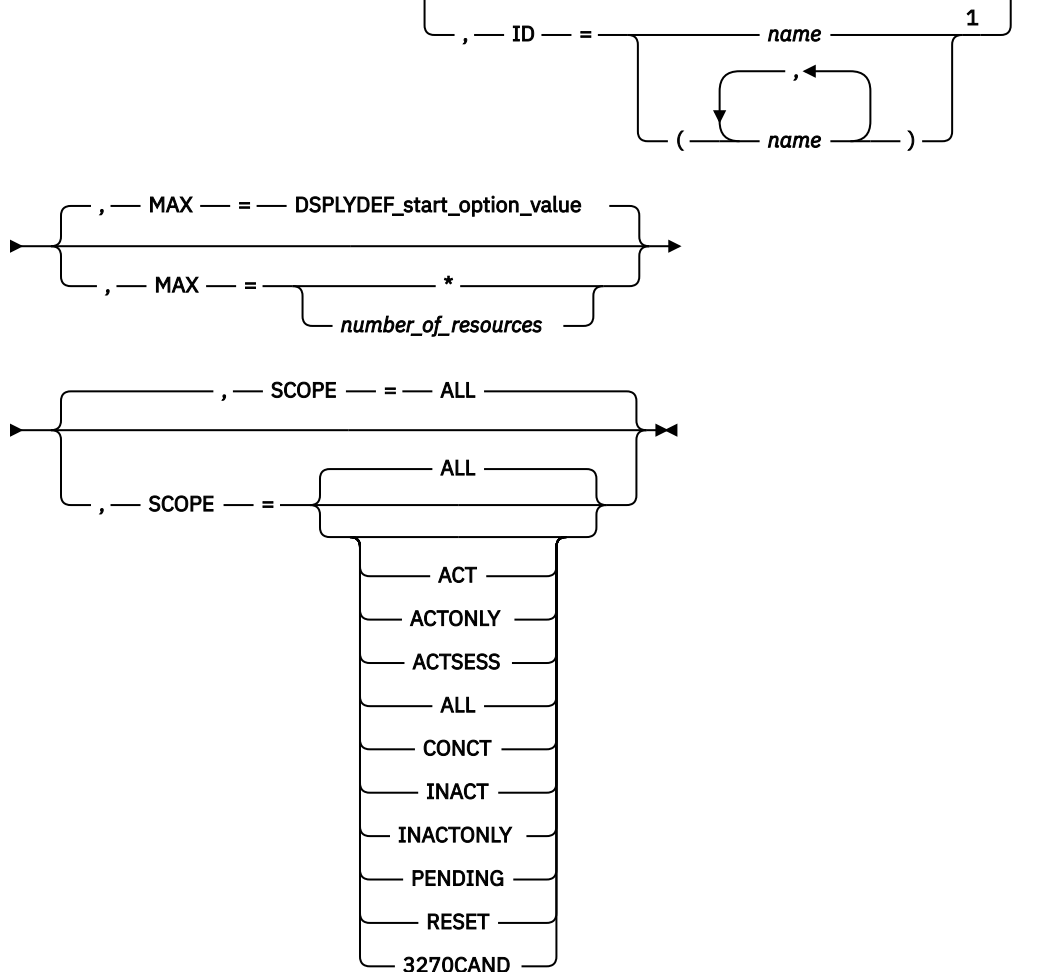

►► DISPLAY — — NET — , — APINGTP →

D APPLS command

Display the status of active application program major nodes in the domain along with their subordinate application program minor nodes:

►► DISPLAY — — NET — , — APPLS →

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

D APPNTOSA command

Display the APPN-to-subarea class-of-service mapping table:

►► DISPLAY — — NET — , — APPNTOSA ◄◄

D AUTOLOG command

Display the controlling applications for which there are pending AUTOLOGON requests:

► D — NET — , — AUTOLOG , — ID — = — *controlling_appl*

Diagram illustrating the relationship between SCOPE and ONLY:

SCOPE = ONLY

SCOPE = ALL

ONLY

$$\left\{ \begin{array}{l} \text{, MAX} = \text{DSPLYDEF_start_option_value} \\ \text{, MAX} = \text{ } * \text{ } \end{array} \right\}$$

number_of_resources

D BFRUSE command

Display information about VTAM buffer use and storage usage summary information for VTAM modules:

►► DISPLAY — — NET — , — BFRUSE ►►

```

graph LR
    BUFFER[ ] --> STRUCT[ ]
    subgraph STRUCT [ ]
        SHORT[SHORT]
        SUMMARY1[SUMMARY]
        buffid[buffid]
        SUMMARY2[SUMMARY]
    end
    SUMMARY1 --> SUMMARY2
  
```

The diagram illustrates the structure of the `BUFFER` variable. It is a pointer to a structure. The structure contains the following fields:

- `SHORT`: A short integer.
- `SUMMARY`: A pointer to a `SUMMARY` structure.
- `buffid`: A buffer identifier.
- `SUMMARY`: A pointer to a `SUMMARY` structure.

D BNCOSMAP command

Display native and nonnative COS mappings defined for a border node:

```

➤ DISPLAY — — NET — , — BNCOSMAP —————
                                     |
                                     | . — NETID — = — netid
                                     |

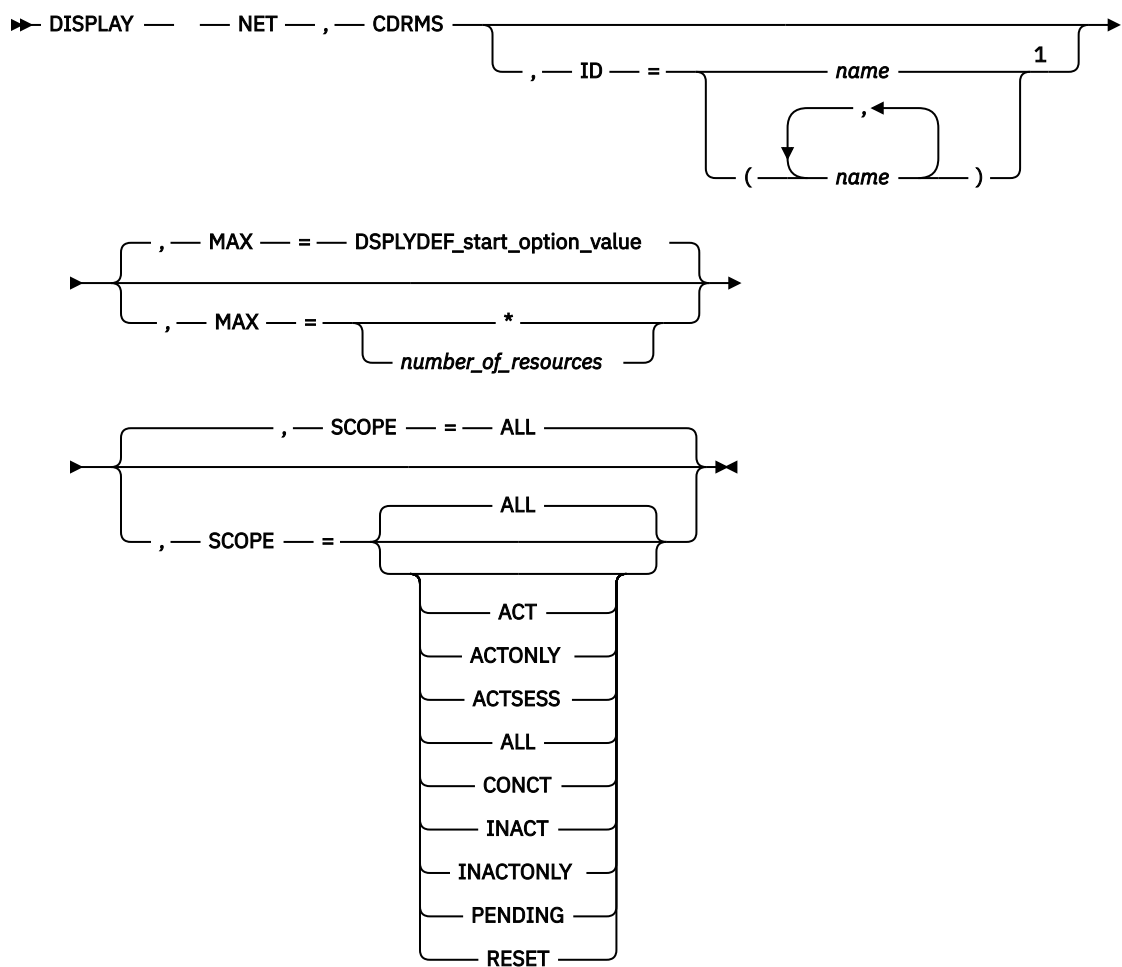

```

Diagram illustrating the relationship between 'SCOPE' and 'ONLY' for two different cases:

- Top case: 'SCOPE' and 'ONLY' are separate entities.
- Bottom case: 'SCOPE' and 'ONLY' are a single entity, with 'ALL' written below it.

D CDRMS command

Display the status of active cross-domain resource manager (CDRM) major nodes and their subordinate minor nodes:

Notes:

¹ Depending on the value of the **DSPLYWLD** start option, wildcard values can be used for this operand.

D CDRSCS command

Display information about cross-domain resources, including independent LUs:

Notes:

¹ Depending on the value of the **DSPLYWLD** start option, wildcard values can be used for this operand.

D CLSTRS command

Display the status of physical units (PUs) subordinate to an NCP node, a local SNA node, or a switched subarea node:

►► DISPLAY — — NET — , — CLSTRS ►

Notes:

¹ Depending on the value of the **DSPLYWLD** start option, wildcard values can be used for this operand.

D CNOS command

Display LU 6.2 information associated with an application program and a partner LU and logon mode:

►► DISPLAY — — NET — , — CNOS — , — ID — = — *appl_name* — , — LUNAME — =►

```
lu_name _____ , — LOGMODE — = — logon_mode_name
```

D CONVID command

Provide information about active conversations with the specified application program:

►► DISPLAY — — NET — , — CONVID — , — ID — = — *appl_name* ►

```

sequenceDiagram
    participant S as SET
    S --> ETIME
    ETIME --> ETIME_0["ETIME = 0"]
    ETIME --> ETIME_min["ETIME = number_of_minutes"]
    S --> DIAG
    DIAG --> DIAG_BLOCKED["DIAG = BLOCKED"]
    DIAG --> BTIME
    BTIME --> BTIME_0["BTIME = 0"]
    BTIME --> BTIME_min["BTIME = number_of_minutes"]
    S --> LOGMODE
    LOGMODE --> LOGMODE_name["LOGMODE = logon_mode_name"]
    S --> LUNAME
    LUNAME --> LUNAME_name["LUNAME = lu_name"]
  
```

D COS command

Display the Class of Service (CoS) table name for a particular network or all networks associated with a specified PU type 4 or 5:

➡ DISPLAY — — NET — , — COS — { , — ID — = — *pu_name* — }

Diagram illustrating the structure of the SUBAREA record:

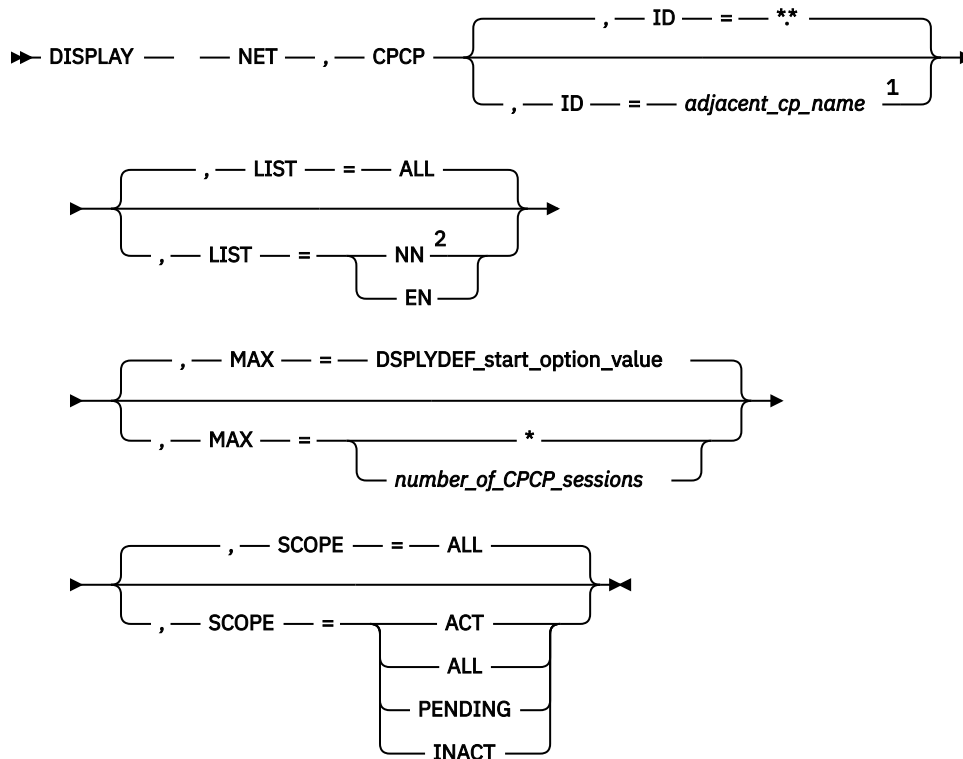

- The record is divided into two main sections by a vertical line.
- The first section is labeled `, NETID =` and contains a field labeled `netid`.
- The second section is labeled `* SUBAREA`.
- The entire record is enclosed in a larger bracket labeled `, TYPE = SUBAREA`.

Display the APPN Class of service table entries and the APPNCOS table used to create each entry:

▶ DISPLAY — — NET — , — COS — , — TYPE — = — APPN ◀

D CPCP command

Display detailed CP-CP session status:

Notes:

- ¹ Depending on the value of the **DSPLYWLD** start option, wildcard values can be used for this operand.
- ² Because an end node will never have CP-CP sessions with another end node, **LIST=EN** is not valid if this command is issued from an end node. In this case, the **LIST** operand is not necessary because the output for **LIST=ALL** and **LIST=NN** will be identical.

D CSDUMP command

Display the current CSDUMP triggers set earlier by the **MODIFY CSDUMP** command or the **CSDUMP** start option:

➤ **DISPLAY** — **NET** — , — **CSDUMP** ➤

D CSM command

Monitor the use of storage managed by the communications storage manager (CSM):

➤ **DISPLAY** — **NET** — , — **CSM** — { **OWNERID** = **ALL** } ➤

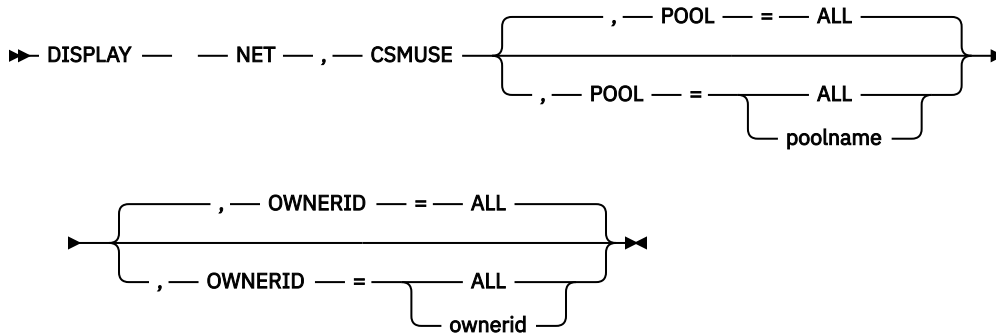

ownerid

Display the status of the CSM Monitoring:

➤ **DISPLAY** — **NET** — , — **CSM** — , — **MONITOR** ➤

D CSMUSE command

The DISPLAY CSMUSE command allows IBM service to evaluate the use of storage managed by the communications storage manager (CSM). Although this command is similar to DISPLAY CSM command, it provides a lower level of detail regarding storage usage, and therefore the output of this command is different than that of DISPLAY CSM.

D DIRECTORY command

Display information about a resource:

>> DISPLAY — NET — , — DIRECTORY — , — ID — = — *name* —>

Display a resource name in any network:

>> DISPLAY — NET — , — DIRECTORY — , — ID — = — * — . — *name* —>

D DLURS command

Display all DLURs for which this host acts as dependent LU server (DLUS):

>> DISPLAY — NET — , — DLURS —>

D EE command

Display general Enterprise Extender information:

Display Enterprise Extender connection information by LINE or PU name:

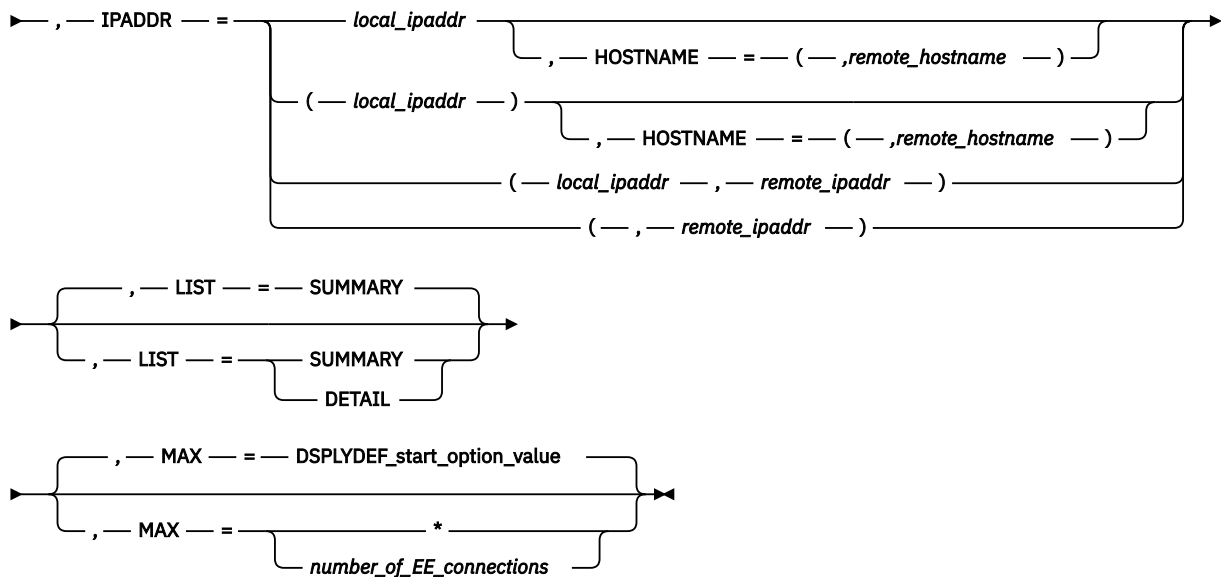

►► DISPLAY — — NET — , — EE — , — ID — = — *name* ►

Note: The name represents either an Enterprise Extender LINE or switched PU which has an active connection.

Display Enterprise Extender connection information by IPADDR:

►► DISPLAY — — NET — , — EE ►

Display Enterprise Extender connection information by HOSTNAME:

➤➤ DISPLAY — — NET — , — EE ➔

Display Enterprise Extender connection information by remote CPNAME:

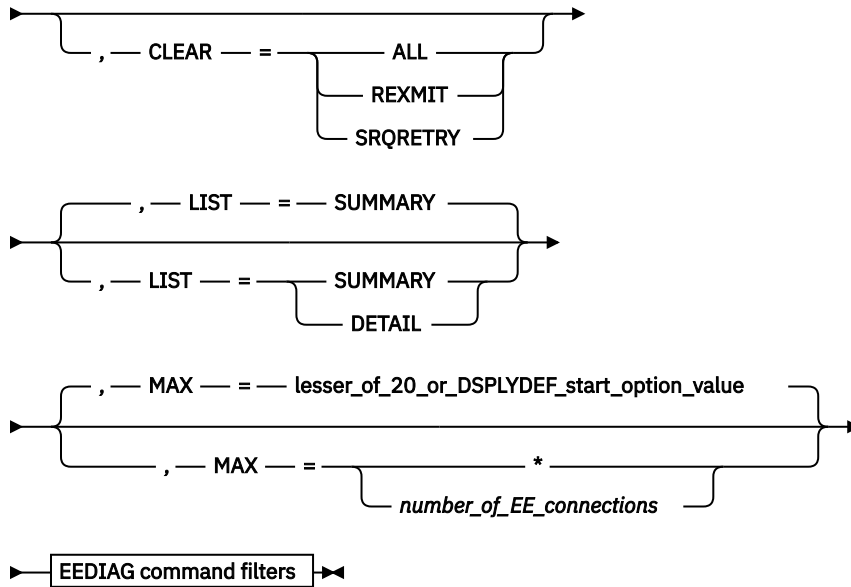

➤➤ DISPLAY — — NET — , — EE — , — CPNAME=name ➔

D EEDIAG command

Display Enterprise Extender (EE) connections that meet or exceed a specified retransmission threshold:

►► DISPLAY — — NET — , — EEDIAG — , — REXMIT — = — *retransmission_rate_percentage* —►

Tip: Specify the CLEAR operand on this command to clear the diagnostic counters. The REXMIT information is displayed before the diagnostic counters are cleared.

Display Enterprise Extender connections that meet or exceed a specified SRQRETRY threshold:

►► DISPLAY — — NET — , — EEDIAG — , — SRQRETRY — = — *retries* —►

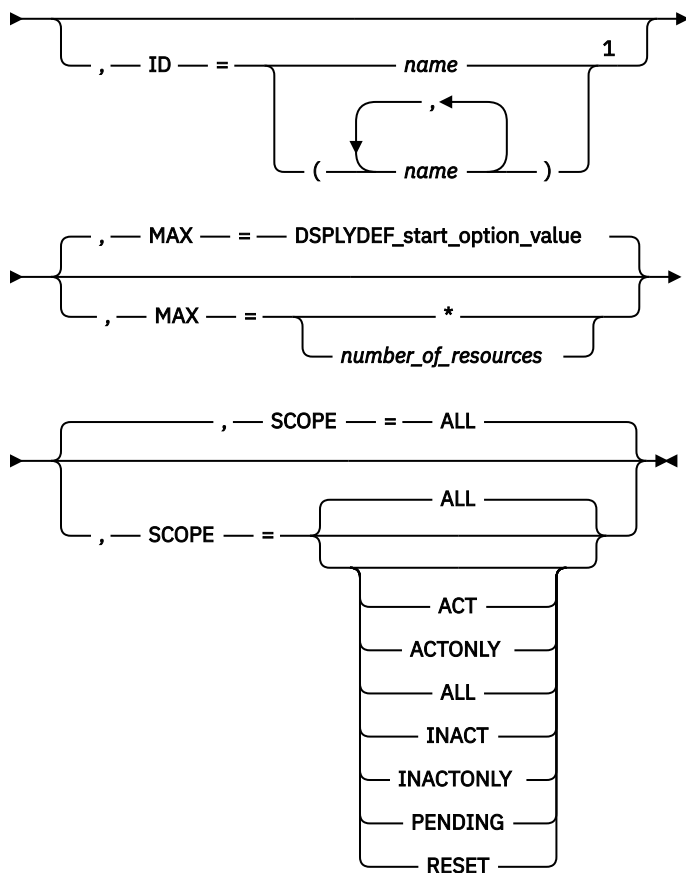

Tip: Specify the CLEAR operand on this command to clear the diagnostic counters. The SRQRETRY information is displayed before the diagnostic counters are cleared.

► DISPLAY — NET — , EEDIAG — , CLEAR — = ALL
REXMIT
SRQRETRY

D GROUPS command

Provide information about line groups:

➡➡ DISPLAY — — NET — , — GROUPS ➡➡

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

D GRPREFS command

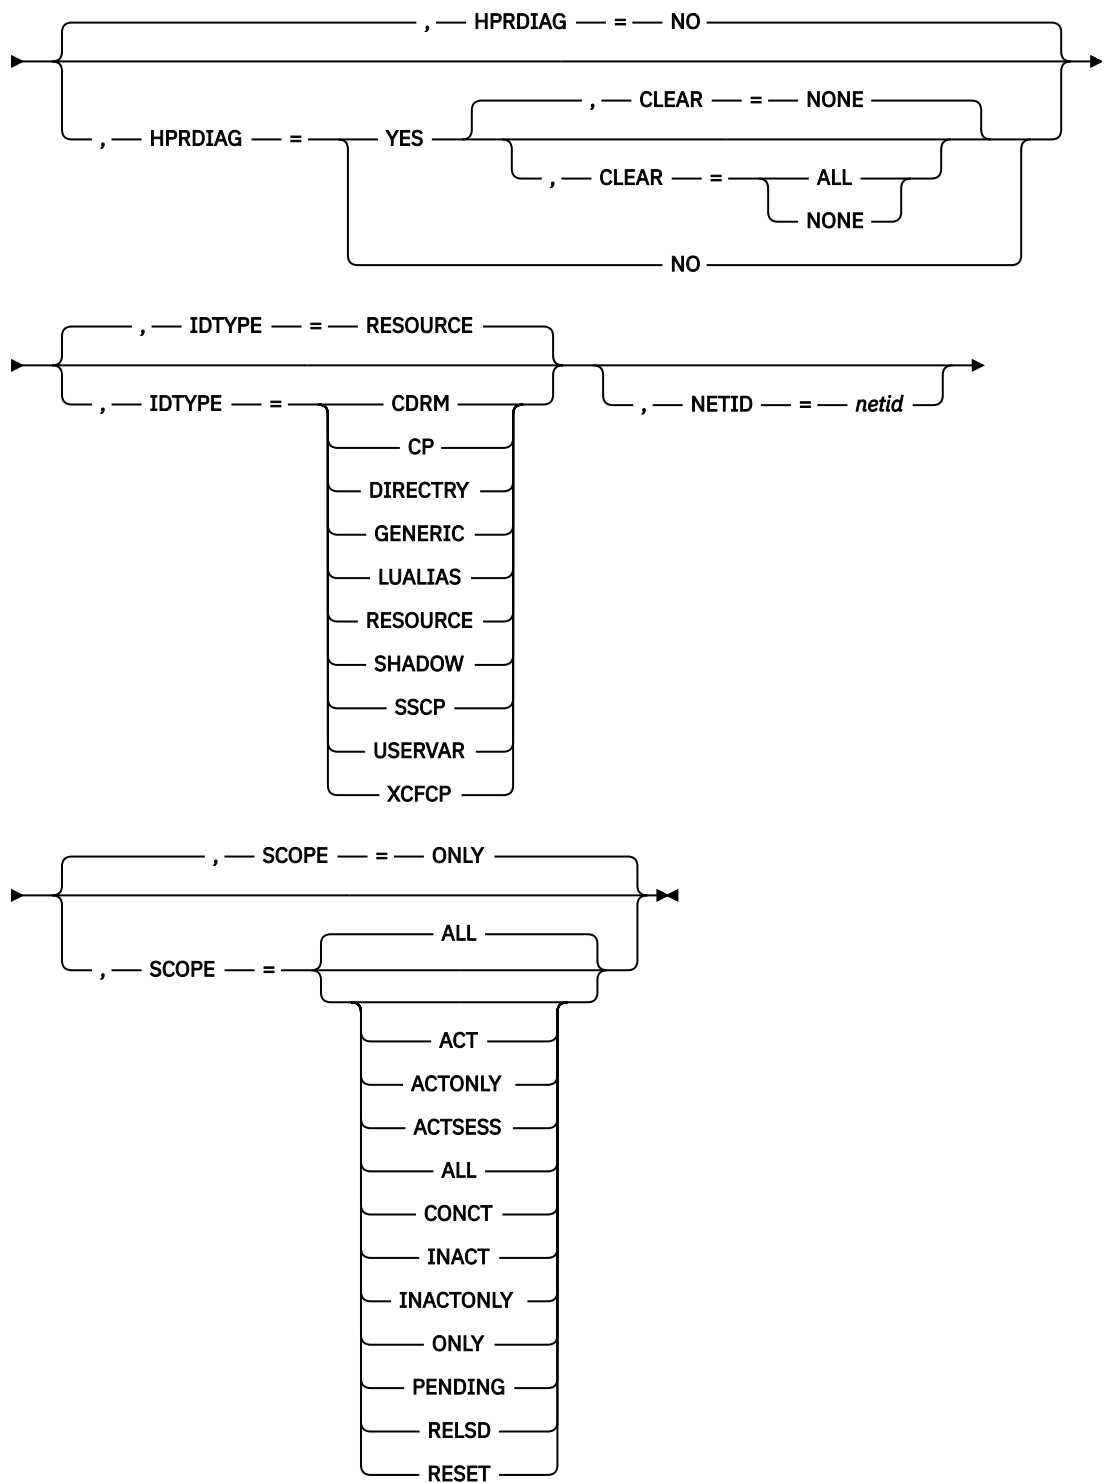

Display the generic resources preferences table:

➡➡ DISPLAY NET,GRPREFS ➡➡

D ID command

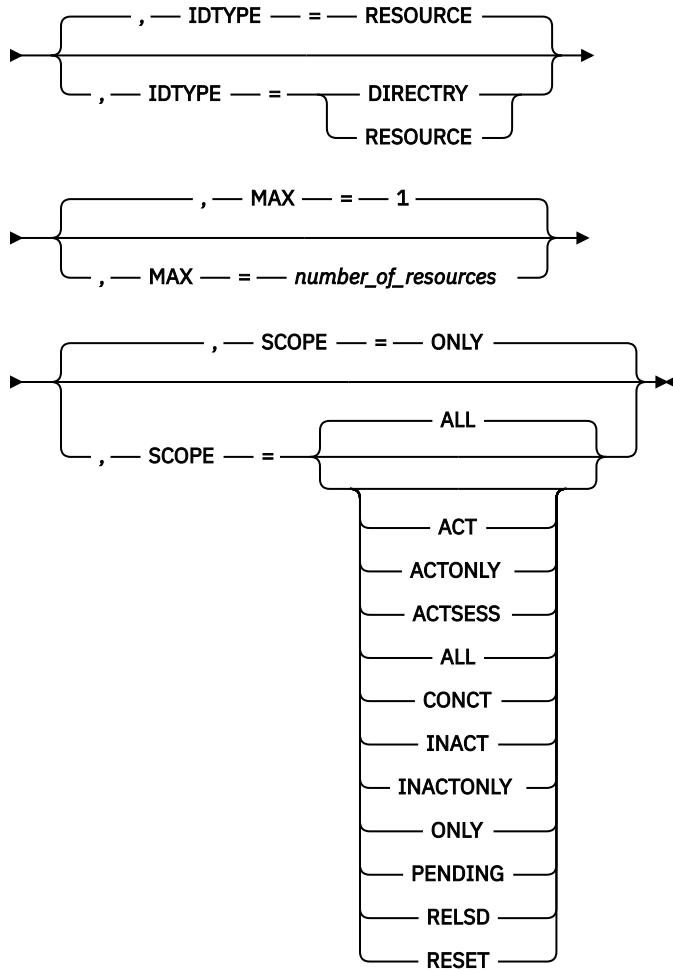

Display a resource:

➤ DISPLAY — — NET — , — ID — = — *name* ➔

Display a resource name in any network:

►► DISPLAY — — NET — , — ID — = — * — . — *name* →

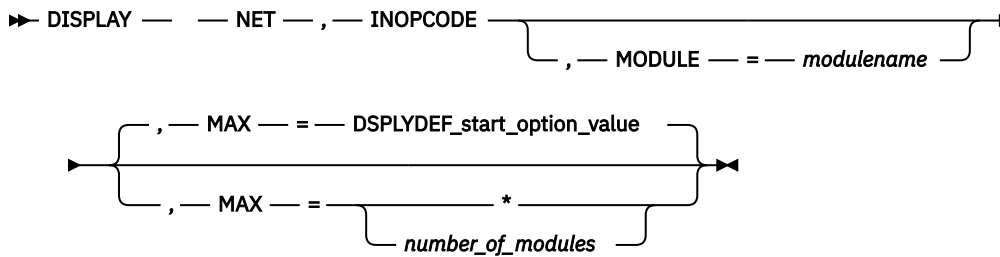

Display a resource name using an IP address:

►► DISPLAY — — NET — , — ID — = — *ipaddress* — , — IDTYPE — = — IPADDR →◄

D INOPCODE command

Determine the dump attributes for all VTAM INOPCODE commands or all VTAM INOPCODE commands in a given VTAM module:

D INOPDUMP command

Determine the global status for INOPDUMP:

►► DISPLAY — — NET — , — INOPDUMP ◄◄

D LINES command

Display the status of lines and channel links in the domain:

[illegible]

Diagram illustrating the relationship between LIST, ALL, and COUNT:

Top line: , — LIST — = — ALL —

Bottom line: , — LIST — = — ALL —

Below the bottom line, a bracket labeled COUNT spans the width of the bottom line.

$$\left\{ \begin{array}{l} \text{, MAX} = \text{DSPLYDEF_start_option_value} \\ \text{, MAX} = \text{ } * \text{ } \\ \text{ } \end{array} \right\}$$

number of resources

```

graph TD
    A["scope = ALL"] --> B["scope = ALL"]
    A --> C["scope = ACT, ACTONLY, ALL, IACTIVE, IINACT, INACT, INACTONLY, PENDING, RESET"]
  
```

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

D LMTBL command

Display partner LUs in LU-mode table:

➤ DISPLAY — — NET — , — LMTBL — , — ID — = — *appl_name* — , — TYPE — = ➔

Display logon mode names in LU-mode table:

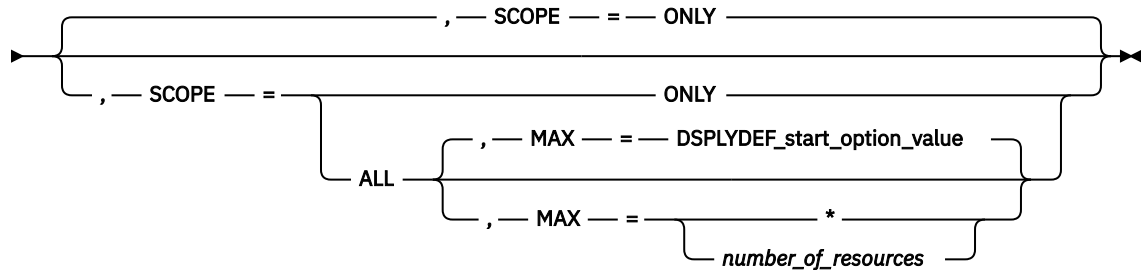

➤ DISPLAY — — NET — , — LMTBL — , — ID — = — *appl_name* — , — LUNAME — = ➔

➤ *lu_name* — , — TYPE — = — LOGMODE ➔

D LUGROUPS command

Display all LUGROUP major nodes:

➤ DISPLAY — — NET — , — LUGROUPS ➔

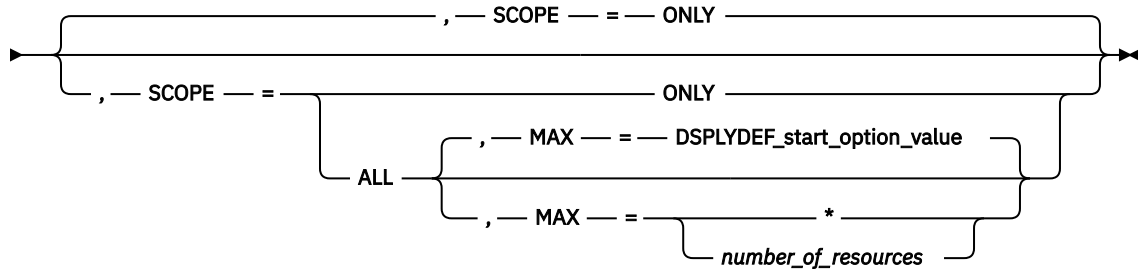

Display a specific LUGROUP major node:

➤ DISPLAY — — NET — , — LUGROUPS — , — ID — = — *lgroup_major_node_name* ➔

Display a model LU group:

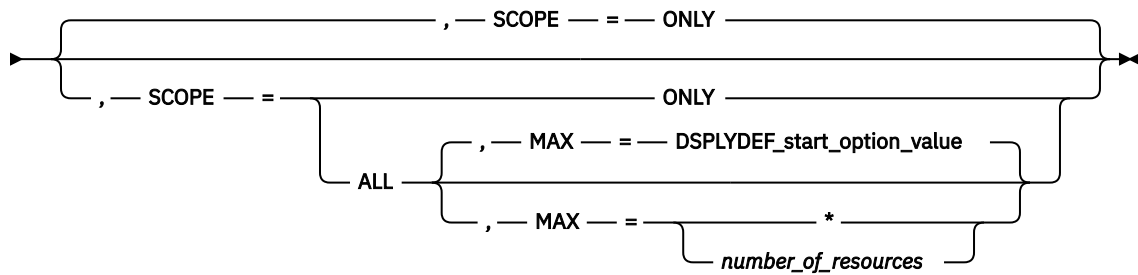

➤ DISPLAY — — NET — , — LUGROUPS — , — ID — = — *model_lu_group* →

Display a model LU:

➤ DISPLAY — — NET — , — LUGROUPS — , — ID — = — *model_lu_name* — , — GROUP →

➤ = — *model_lu_group* →

D MAJNODES command

Display the status of all active major nodes in the domain:

➤ DISPLAY — — NET — , — MAJNODES →

D MODELS command

Display model major nodes, model PUs, and model LUs:

➤ DISPLAY — — NET — , — MODELS — , — ID — = — *model_name* →

Display the best, active model application definition for a given application name:

➤ DISPLAY — — NET — , — MODELS — , — APPL — = — *appl_name* ➤

D NETSRVR command

Display information about network node servers:

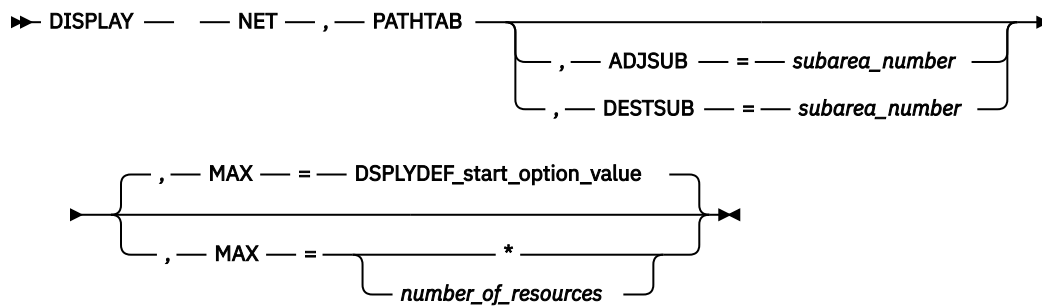

D PATHS command

Display dial-out path information about a switched physical unit:

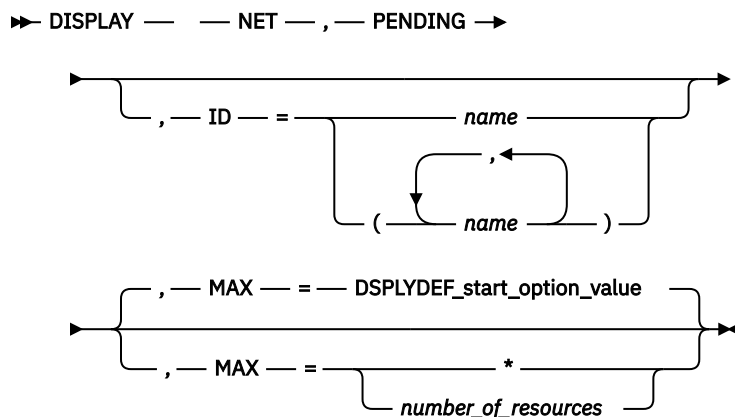

D PATHTAB command

Display the status of explicit routes and their associated virtual routes for this host:

D PENDING command

Display information about resources in the domain that are in a "pending" state:

D ROUTE command

Displaying the status of routes:

►► DISPLAY — — NET — , — ROUTE — , — DESTSUB — = — *subarea_number* ►

Displaying blocked virtual routes:

►► DISPLAY — — NET — , — ROUTE — , — BLOCKED — , — NETID — = — *netid* ¹ ►

Notes:

¹ When the `BLOCKED` operand is specified, the `NETID` of the host where the command was entered is assumed, and specification of another `NETID` is not permitted.

Displaying held virtual routes:

►► DISPLAY — — NET — , — ROUTE — , — HELD ►

D RSCLIST command

Display information about resources whose names match a particular pattern:

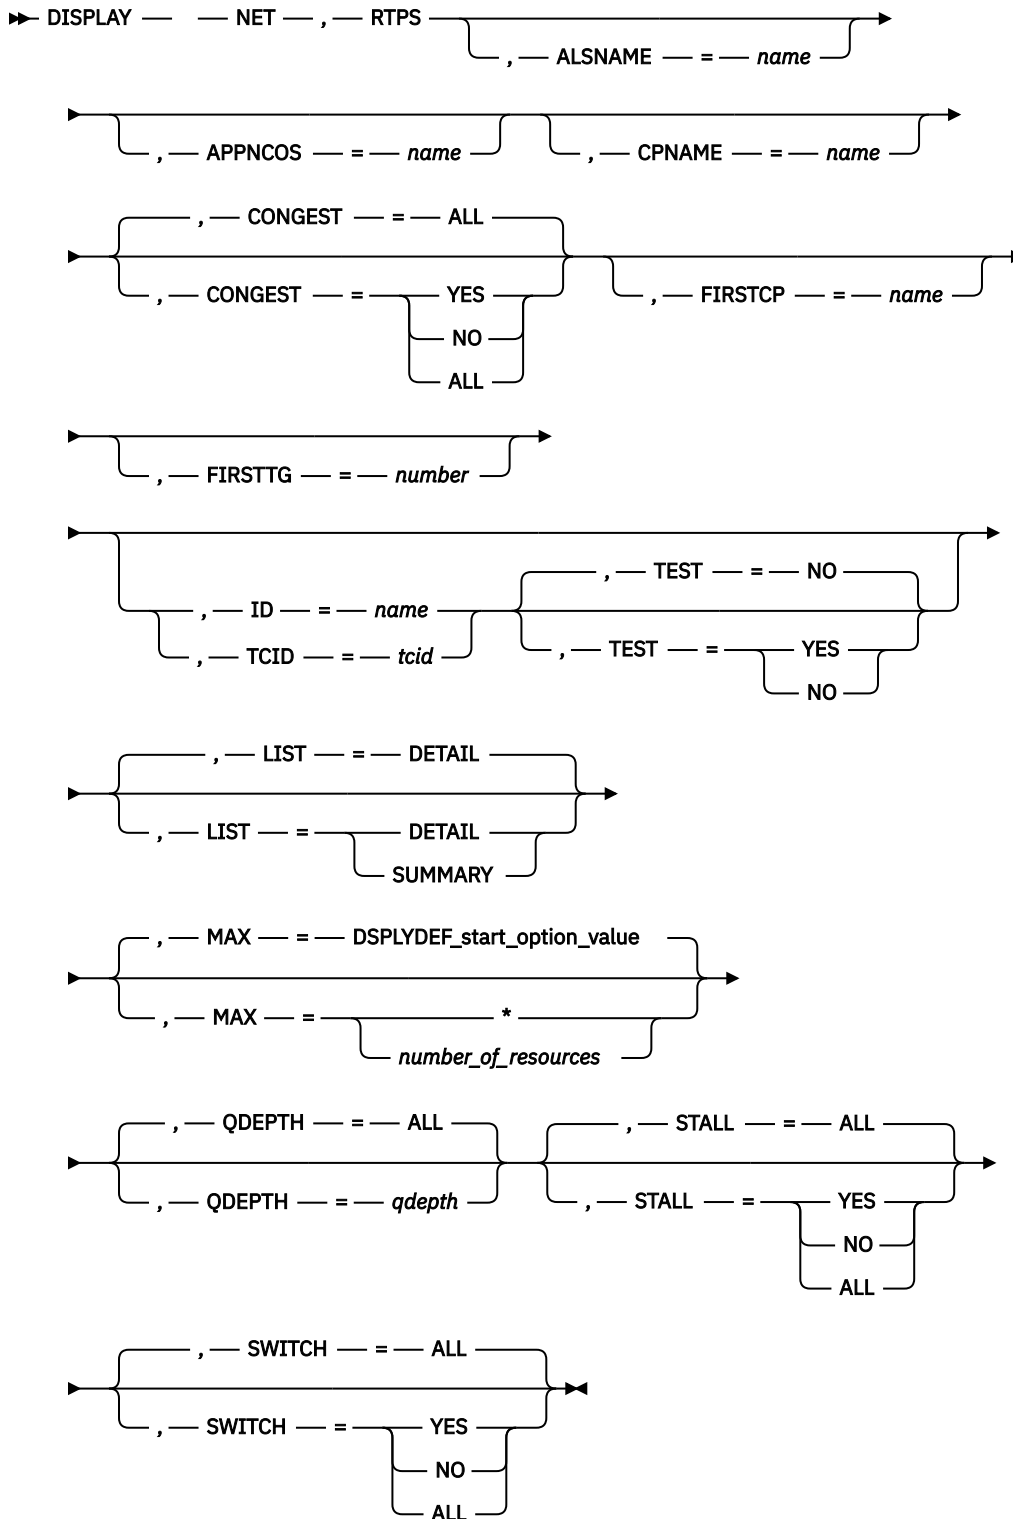

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

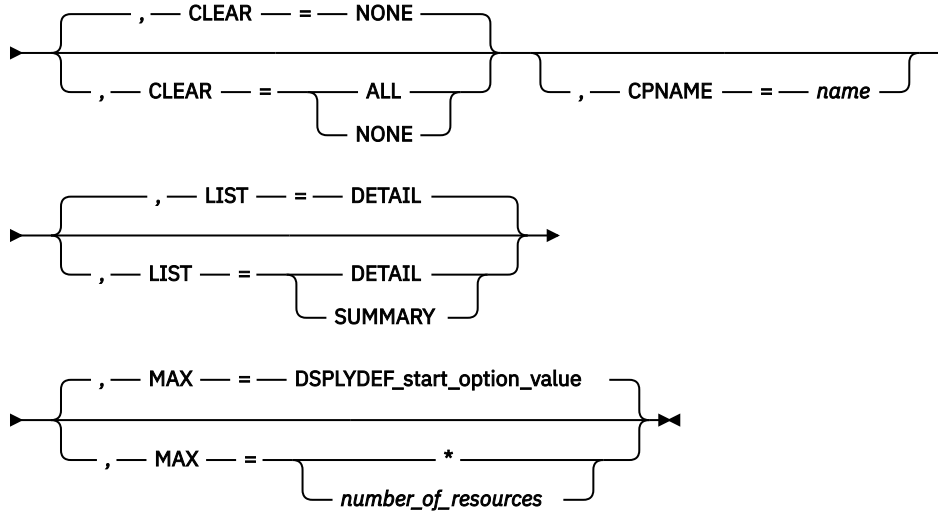

D RTPS command

Display information concerning HPR pipes:

Display RTP pipes that meet or exceed a specified retransmission threshold:

➤ DISPLAY — — NET — , — RTPS — , — REXMIT — = — *retransmission_rate_percentage* ➔

Clear the RTP pipes diagnostic counters:

➤ DISPLAY — — NET — , — RTPS — , — CLEAR — = — ALL ➔

D SAMAP command

Display the subarea mapping table from an ICN host:

➤ DISPLAY — — NET — , — SAMAP ➔

D SATOAPPN command

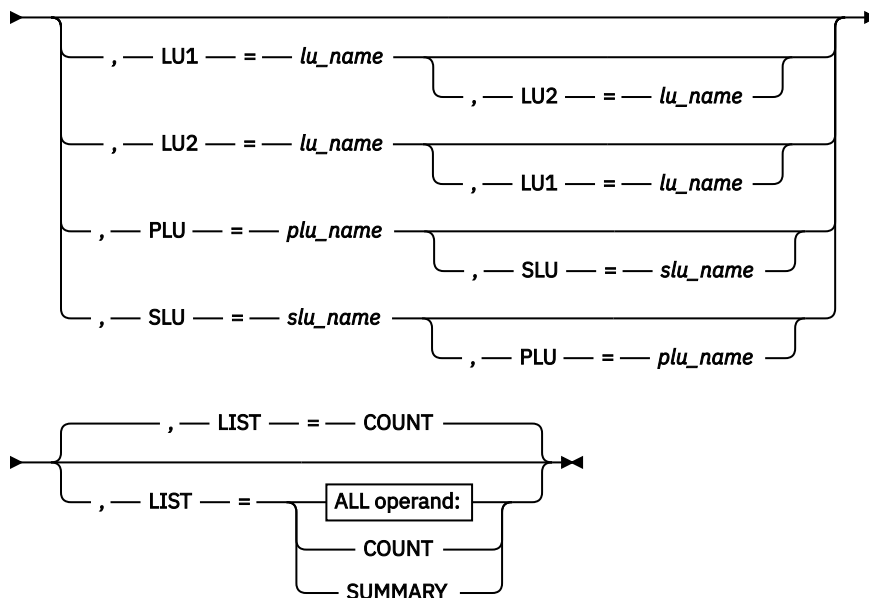

Display the subarea-to-APPN class-of-service mapping table:

➤ DISPLAY — — NET — , — SATOAPPN ➔

D SESSIONS command

Display all sessions:

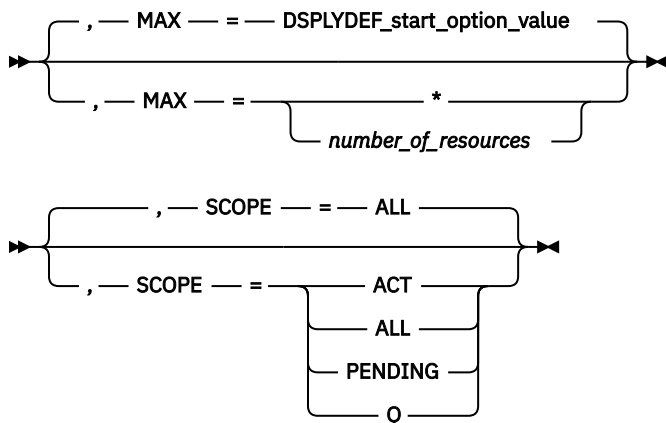

➤ DISPLAY — — NET — , — SESSIONS →

ALL operand:

➤ ALL — MAX operand: ➤

MAX operand:

Display a specific session:

➤ DISPLAY — — NET — , — SESSIONS — , — SID — = — session_id →

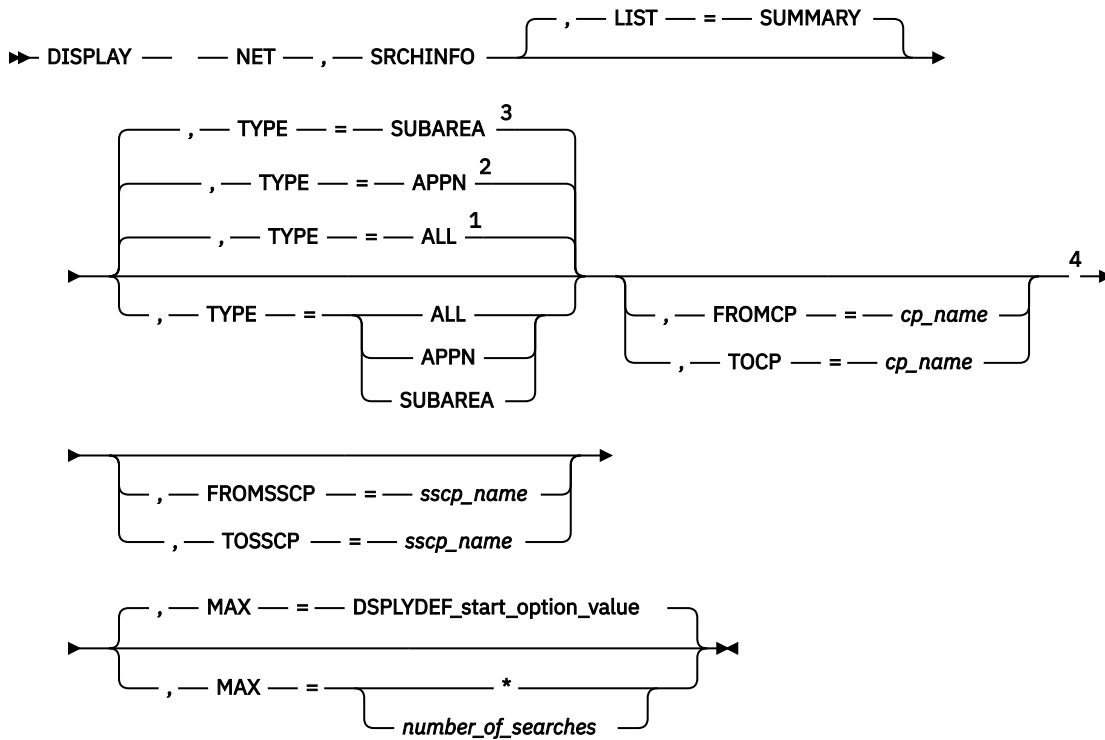

D SNSFILTR command

Display the current active SAW sense filter:

►► DISPLAY — — NET — , — SNSFILTR ►►

D SRCHINFO command

Display summary information about outstanding subarea and APPN searches:

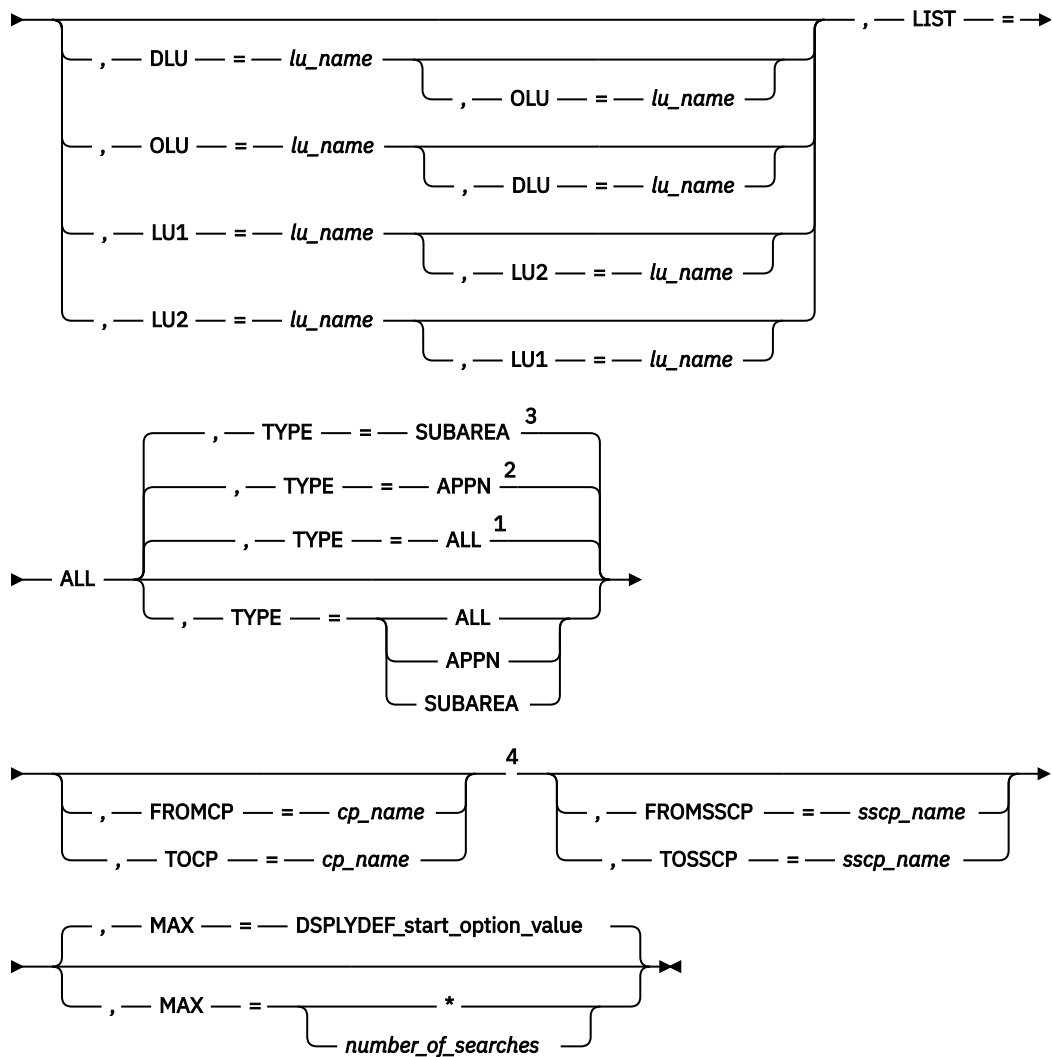

Notes:

- ¹ TYPE=ALL is the default when the HOSTSA and NODETYPE start options are specified.
- ² TYPE=APPN is the default when the NODETYPE start option is specified without the HOSTSA start option.
- ³ TYPE=SUBAREA is the default when the HOSTSA start option is specified without the NODETYPE start option.
- ⁴ These operands are valid with TYPE=APPN or TYPE=ALL.

Display detailed information about outstanding subarea and APPN searches:

➔ DISPLAY — — NET — , — SRCHINFO ➔

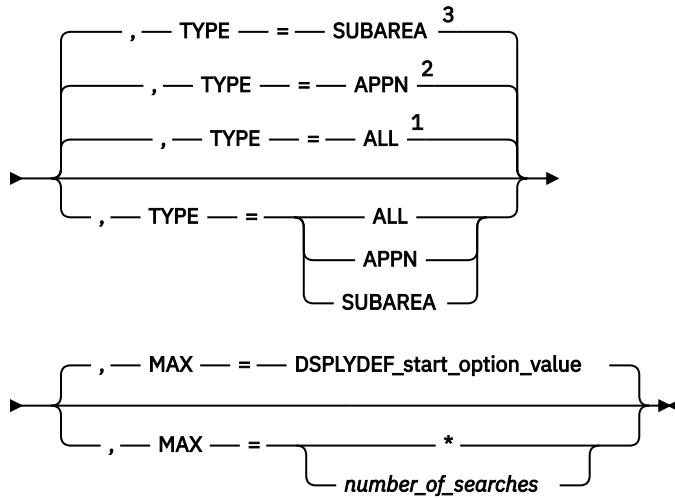

Notes:

- ¹ TYPE=ALL is the default when the HOSTSA and NODETYPE start options are specified.
- ² TYPE=APPN is the default when the NODETYPE start option is specified without the HOSTSA start option.
- ³ TYPE=SUBAREA is the default when the HOSTSA start option is specified without the NODETYPE start option.
- ⁴ These operands are valid with TYPE=APPN or TYPE=ALL.

Display search information about a specific search request:

➡ DISPLAY — , — NET — , — SRCHINFO — , — SID — = — *session_identifier* ➡

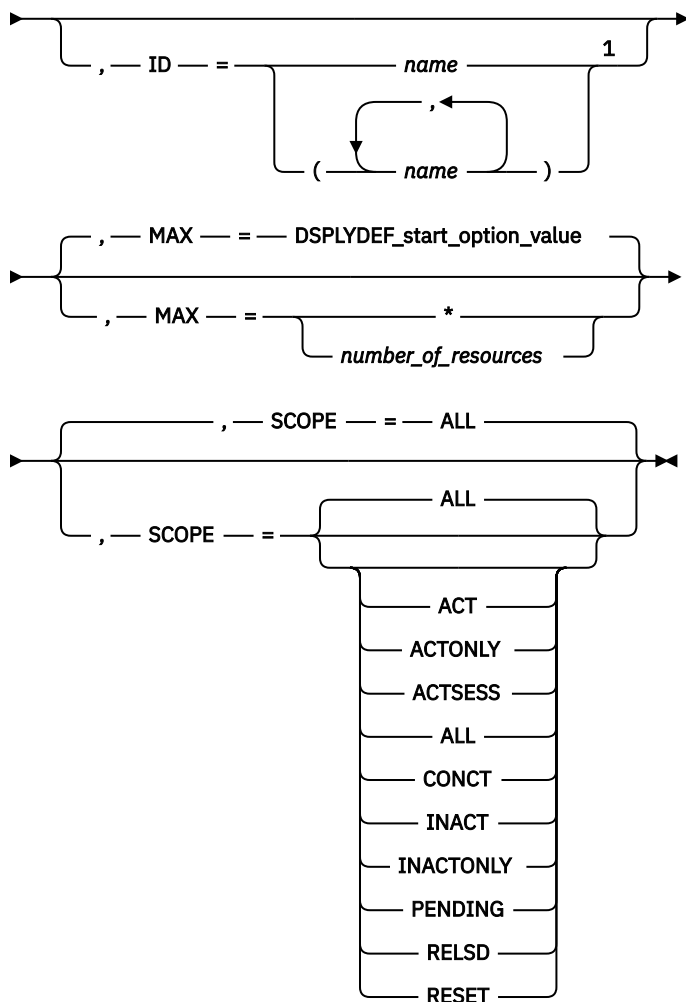

Notes:

- ¹ TYPE=ALL is the default when the HOSTSA and NODETYPE start options are specified.
- ² TYPE=APPN is the default when the NODETYPE start option is specified without the HOSTSA start option.
- ³ TYPE=SUBAREA is the default when the HOSTSA start option is specified without the NODETYPE start option.

D STATIONS command

Display the status of all cross-subarea link stations for active major nodes:

➤ DISPLAY — — NET — , — STATIONS ➔

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

D STATS command

Display resource statistics:

➤ DISPLAY — — NET — , — STATS — , — TYPE — = — VTAM ➔

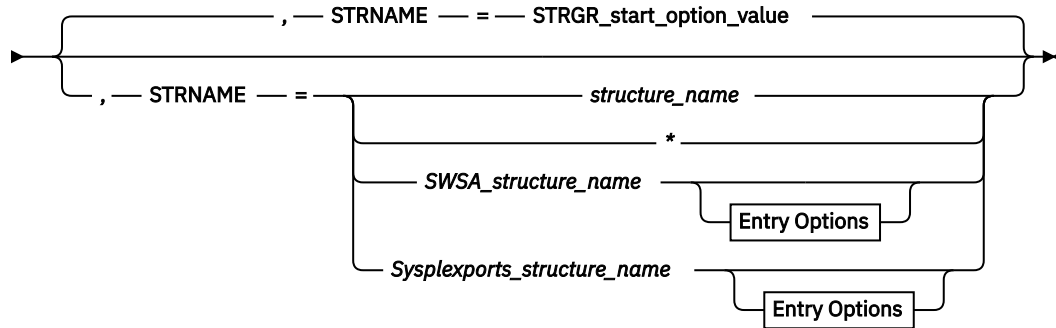

Display data compression statistics:

➤ DISPLAY — — NET — , — STATS — , — TYPE — = — COMPRESS ➔

Display coupling facility structure statistics:

►► DISPLAY — — NET — , — STATS — , — TYPE — = — CFS ►

The vv value is the VTAM XCF group ID, as specified on the XCFGRPID start option. The tt value is the TCP XCF group ID, as specified on the XCFGRPID parameter on the GLOBAL CONFIG statement.

If a VTAM XCF group ID is specified, and no TCP XCF group ID is specified, the tt value is not present. If a TCP XCF group ID is specified, and no VTAM XCF group ID is specified, vv is 01. If both a VTAM XCF group ID and a TCP XCF group ID were not specified, vv and tt are not present.

Entry Options

Scope Options

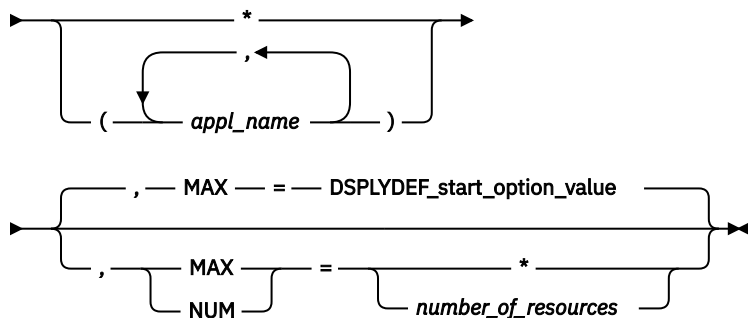

Max Options

D STORUSE command

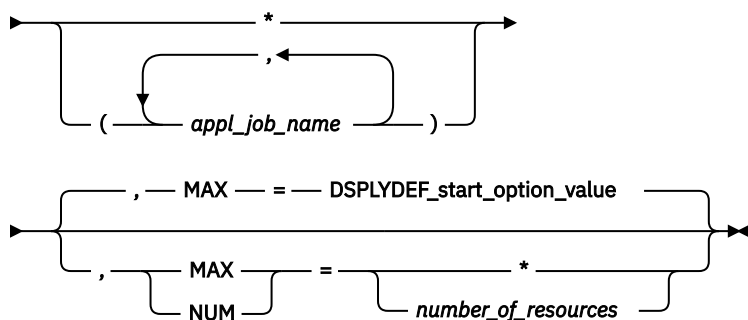

Display storage usage for applications:

►► DISPLAY — — NET — , — STORUSE — , — APPL — = —►

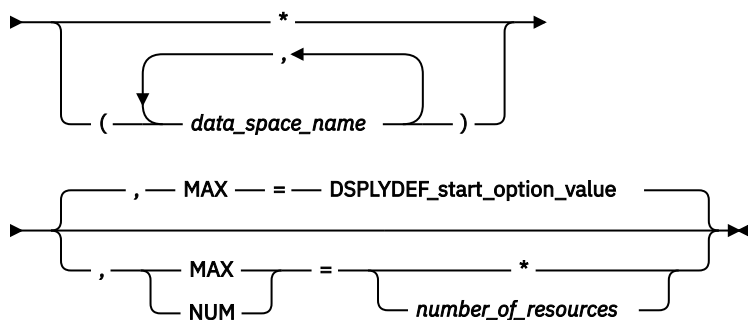

Display storage usage for application jobs:

►► DISPLAY — — NET — , — STORUSE — , — JOBNAME — = —►

Display storage usage for data spaces:

►► DISPLAY — — NET — , — STORUSE — , — DSPNAME — = —►

Display storage usage for storage pools:

►► DISPLAY — — NET — , — STORUSE →

D TABLE command

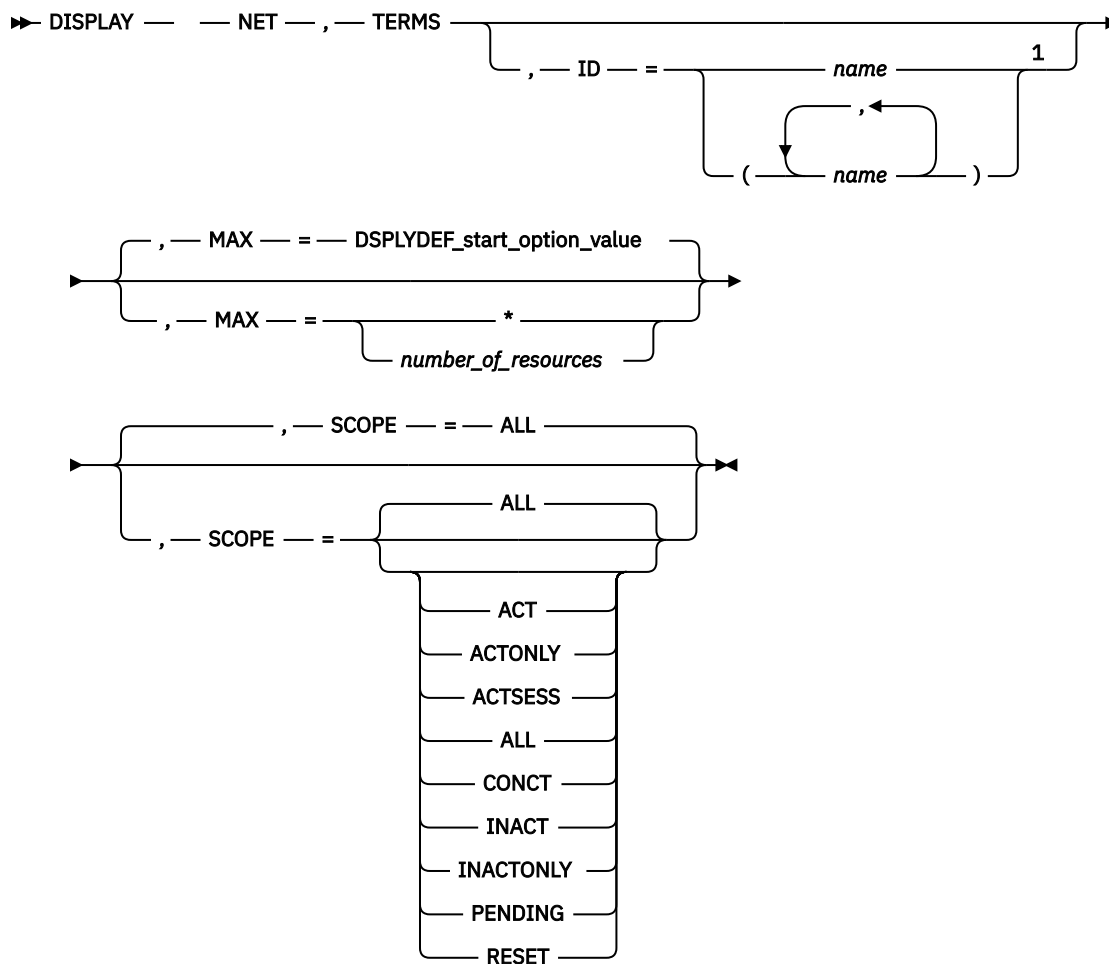

Display the table type and the number of resources that are associated with the table (use count) and identify the users of a table:

►► DISPLAY — — NET — , — TABLE — , — ID — = — *table_name* →

D TERMS command

Display the status of device-type logical units (terminals) that are in active major nodes:

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

D TGPS command

Display the currently defined TG profiles by name, along with the transmission group characteristics that they represent:

►► DISPLAY — — NET — , — TGPS →

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

D TNSTAT command

Display the current status of global and TRLE tuning statistics and the CNSL and TIME values: (If system management facility (SMF) recording is enabled, this is also indicated.)

D TOPO command

Display a summary of the topology database:

►► DISPLAY — — NET — , — TOPO — , — LIST — = — SUMMARY →

Display a specific node:

►► DISPLAY — — NET — , — TOPO — , — ID — = — cp_name →

Display adjacent nodes:

►► DISPLAY — — NET — , — TOPO — , — ID — = — cp_name — , — LIST — = — ADJ →

Display nodes of a specific type:

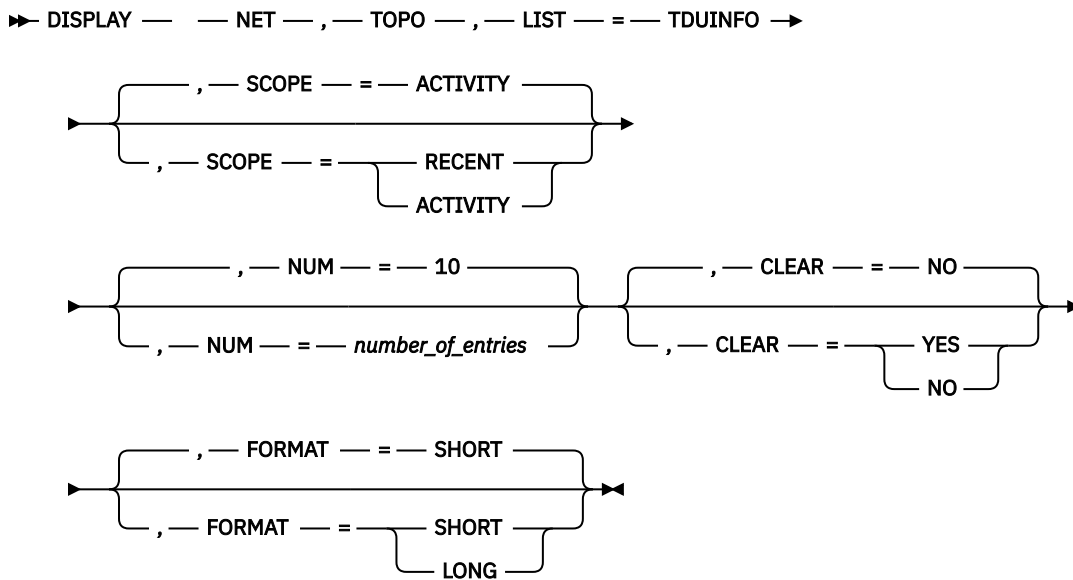

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

Display all nodes with a specific locsize:

Display TDU statistics information:

Display a specific TG or TGs:

►► DISPLAY — — NET — , — TOPO — , — ORIG — = — *cp_name* →

Display Enterprise Extender connection network unreachable partner information on a network node:

►► DISPLAY — — NET — , — TOPO — , — LIST — = — UNRCHTIM →

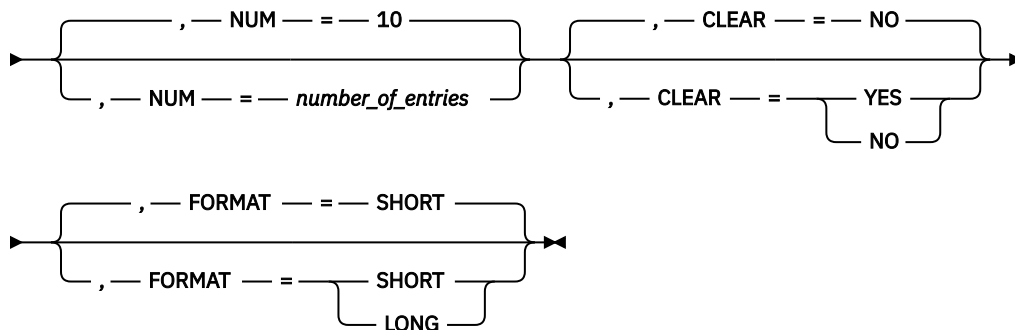

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

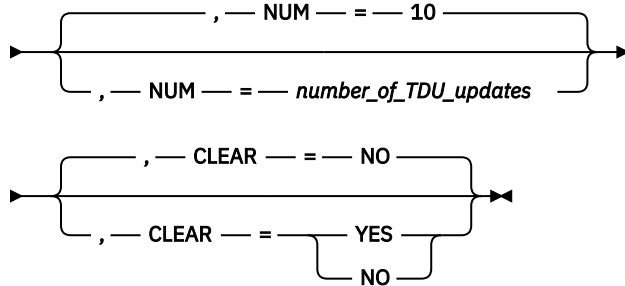

Display a summary of topology database update (TDU) diagnostic information:

►► DISPLAY — — NET — , — TOPO — , — LIST — = — TDUDIAG →

Display TDU diagnostic information for a node:

►► DISPLAY — — NET — , — TOPO — , — LIST — = — TDUDIAG — , — ID — = — *cp_name* ►

Display TDU diagnostic information for a TG:

►► DISPLAY — — NET — , — TOPO — , — LIST — = — TDUDIAG — , — ORIG — = ►

► *cp_name* — , — DEST — = — *cp_name* — , — TGN — = — *tg_number* ►

Rule: The values LIST=UNRCHTIM and LIST=TDUDIAG are valid on the DISPLAY NET,TOPO command only when the command is issued on a network node.

D TRACES command

Display the status of BUF, GPT, IO, LINE, QDIOSYNC, SIT, STATE, and TG traces:

►► DISPLAY — — NET — , — TRACES — , — TYPE — = — NODES — , — ID — = ►

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

Display the status of communication network management traces:

►► DISPLAY — — NET — , — TRACES — , — TYPE — = — CNM ►

Display the status of the user Exit buffer trace:

►► DISPLAY — — NET — , — TRACES — , — TYPE — = — EXIT — , — ID — =►

Display the status of a module trace:

▶▶ DISPLAY — — NET — , — TRACES — , — TYPE — = — MODULE ◀◀

Display the status of a network controller line trace:

► DISPLAY — — NET — , — TRACES — , — TYPE — = — NETCTLR — , — ID — = ►

► 3710_pu_name ◄

Display the status of the APPN route selection trace in a network node:

►► DISPLAY — — NET — , — TRACES — , — TYPE — = — ROUTE ¹►►

Notes:

¹ TYPE=ROUTE is allowed only in a network node.

Display the status of an SMS (buffer use) trace:

►► DISPLAY — — NET — , — TRACES — , — TYPE — = — SMS ►

Display the status of a resource state trace:

▶ DISPLAY — — NET — , — TRACES — , — TYPE — = — STATE ◀

Display the status of a TSO user trace:

►► DISPLAY — — NET — , — TRACES — , — TYPE — = — TSO — , — ID — = ►

Notes:

¹ Depending on the value of the DSPLYWLD start option, wildcard values can be used for this operand.

Display the status of the VTAM internal trace:

▶▶ DISPLAY — — NET — , — TRACES — — TYPE — = — VTAM ▶▶

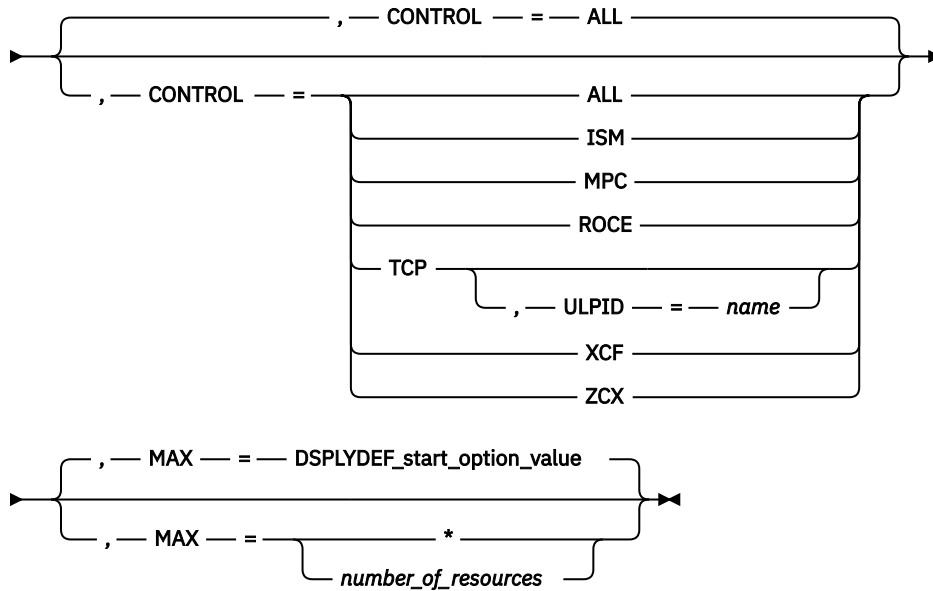

Display the status of all active traces:

▶▶ DISPLAY — — NET — , — TRACES — , — TYPE — = — ALL ◀◀

D TRL command

Display the entries in the TRL major nodes:

►► DISPLAY — — NET — , — TRL →

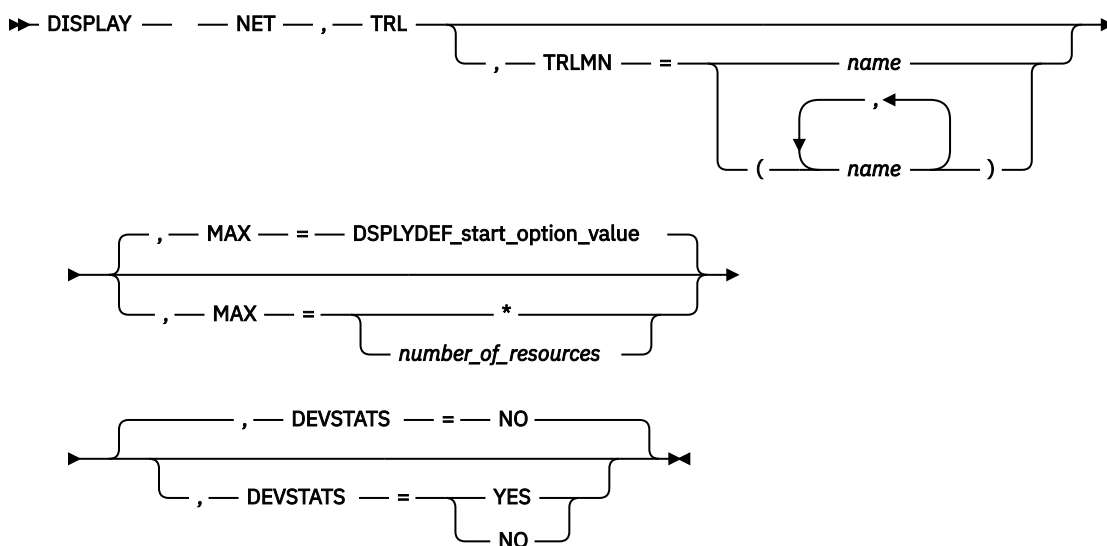

Display information about a specific user-defined TRLE:

►► DISPLAY — — NET — , — TRL — , — TRLE — = — *trl_entry_name* →◄

Display information about a dynamic XCF TRLE:

►► DISPLAY — — NET — , — TRL — , — XCFCP — = — *cp_name* →◄

Display the entries in one or more specific TRL major nodes:

D TSOUSER command

Display the status of a TSO user ID:

➤ DISPLAY — — NET — , — TSOUSER — , — ID — = — *user_id* ➤

D USERVAR command

Display all USERVARs:

➤ DISPLAY — — NET — , — USERVAR ➤

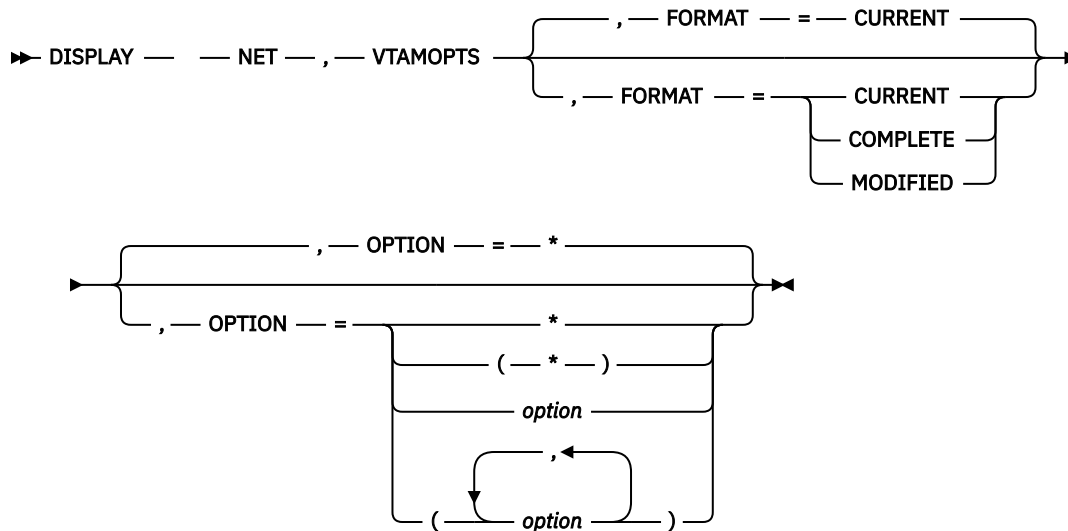

Display a specific USERVAR:

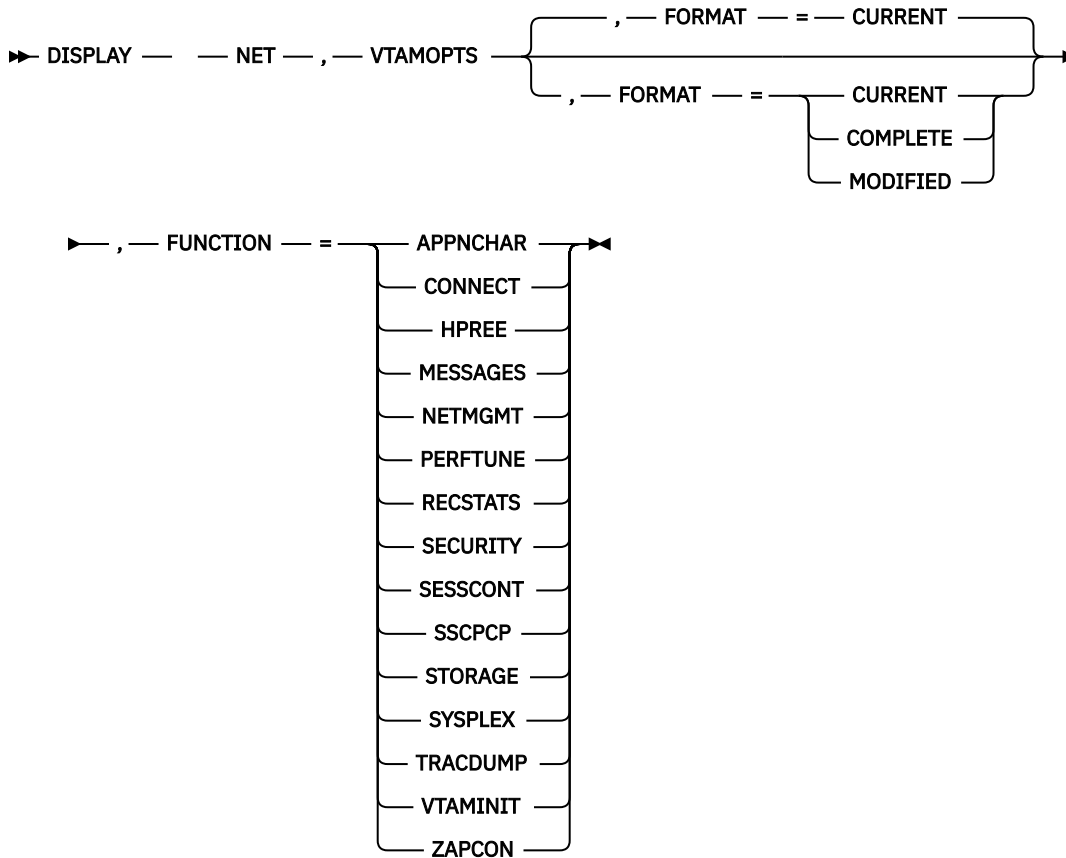

➤ DISPLAY — — NET — , — USERVAR — , — ID — = — *uservar_name* ➤

D VTAMOPTS command

Display selected start options:

Display a group of related start options:

D VTAMSTOR command

Display storage contents associated with a storage address:

►► DISPLAY — — NET — , — VTAMSTOR — , — ADDRESS — = — *storage_address* —►

Display storage contents associated with a module:

►► DISPLAY — — NET — , — VTAMSTOR — , — MODULE — = — *module_name* —►

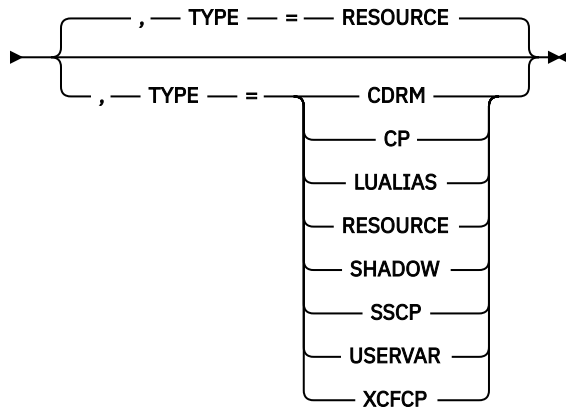

Display storage contents associated with a network address:

►► DISPLAY — — NET — , — VTAMSTOR — , — NETADDR — = — (—►

Display storage contents associated with a resource name:

➤ DISPLAY — — NET — , — VTAMSTOR — , — RESOURCE — = — *resource_name* ➔

Operator halt commands

HALT (Z) command

Request a normal halt of VTAM without disrupting active LU-LU sessions:

Z CANCEL command

Request a halt of VTAM via abend:

Z QUICK command

Request a halt of VTAM disrupting active LU-LU sessions:

Operator modify commands

F ALSLIST command

Add an entry to an adjacent link station list:

➤ MODIFY — *procname* — , — ALSLIST — , — ACTION — = — ADD — , — ID — = ➔

➤ — * — , — NEWALS — = — *adjacent_link_station_name* ➤
└─ *cdrsc_major_node* ─┘
└─ *cdrsc_name* ─┘

Delete an entry from an adjacent link station list:

➤ MODIFY — *procname* — , — ALSLIST — , — ACTION — = — DELETE — , — ID — = ➔

➤ — * — , — OLDALS — = — *adjacent_link_station_name* ➤
└─ *cdrsc_major_node* ─┘
└─ *cdrsc_name* ─┘

Replace an entry in an adjacent link station list:

➤ MODIFY — *procname* — , — ALSLIST — , — ACTION — = — REPLACE — , — ID — = ➔

➤ — * — , — NEWALS — = — *adjacent_link_station_name* — , ➔
└─ *cdrsc_major_node* ─┘
└─ *cdrsc_name* ─┘

➤ — OLDALS — = — *adjacent_link_station_name* ➤

Create a clone CDRSC or a dynamic CDRSC and add entry in adjacent link station list:

➤ MODIFY — *procname* — , — ALSLIST — , — ACTION — = — CREATE — , — ID — = ➔

➤ — *cdrsc_name* — , — NEWALS — = — *adjacent_link_station_name* ➤

F APINGDTP command

Change the number of APINGD transaction programs permitted to run concurrently for responding to APING requests from other nodes:

➤ MODIFY — *procname* — , — APINGDTP — , — INSTANCE — = — *UNLIMITED* —
└─ *value* ─┘

F CNOS command

Set session limits to zero for one logon mode:

►► MODIFY — — *procname* — , — CNOS — , — ID — = — *appl_name* — , — LIMITS — = ►

► (— 0 — , — 0 — , — 0 —) — , — LOGMODE — = — *logon_mode_name* — , ►

LUNAME = *lu_name*

Timing diagram for the DRAIN pin. The diagram shows a horizontal timeline with two main sections. The first section is labeled "DRAIN" and contains two horizontal bars: the top one is labeled ", DRAIN = NO" and the bottom one is labeled ", DRAIN = NO YES". The second section is labeled "NBRMODE = ONE" and contains a single horizontal bar.

Set session limits to zero for all logon modes:

►► MODIFY — — *procname* — , — CNOS — , — ID — = — *appl_name* — , — LIMITS — = ►

```
► (— 0 —, — 0 —, — 0 —) —, — LUNAME — = — lu_name —, — NBRMODE — = ►
```

ALL — { , — DRAINL — = — NO }
 { , — DRAINL — = — NO }
 { YES }

Timing diagram for the DRAINR and RESP signals. The diagram shows two horizontal timelines. The top timeline has a signal labeled 'DRAINR' that transitions from 'NO' to 'YES' at a certain point. The bottom timeline has a signal labeled 'RESP' that transitions from 'LOCAL' to 'REMOTE' at the same point. Vertical lines connect the transitions of the two signals, indicating they occur simultaneously.

```

graph LR
    Start(( )) --> SNGSESLU{SNGSESLU}
    SNGSESLU -- NO --> End1(( ))
    SNGSESLU -- YES --> End2(( ))
  
```

Flowchart for SNGSESLU decision logic:

- Decision: SNGSESLU
- If NO, proceed to the next step.
- If YES, proceed to the next step.

Set session limits to nonzero:

➤ MODIFY — — *procname* — , — CNOS — , — ID — = — *appl_name* — , — LIMITS — = →

➤ (— *sesslim* — , — *minwinl* — , — *minwinr* —) — , — LOGMODE — = →

➤ *logon_mode_name* — , — LUNAME — = — *lu_name* →

Use existing session limits:

➤ MODIFY — — *procname* — , — CNOS — , — ID — = — *appl_name* — , — LOGMODE — = →

➤ *logon_mode_name* — , — LUNAME — = — *lu_name* →

F COMPRESS command

Change the compression levels set by the APPL definition statement:

➤ MODIFY — — *procname* — , — COMPRESS — , — ID — = — *appl_name* →

➤ MODIFY — — *procname* — , — COMPRESS — , — CMPVTAM — = — *overall_limit* ➤

F CSALIMIT command

Dynamically change the amount of common service area (CSA) storage that VTAM is allowed to use:

► MODIFY — — *procname* — , — CSALIMIT = ————— *value* —————
 (— *value* —————)
 — , — F —

Diagram illustrating two paths from a start point to an end point:

- Top path: $\text{, — OPTION — = — TOTAL}$
- Bottom path: $\text{, — OPTION — = — BELOW TOTAL}$

F CSDUMP command

Dump the current address space and VIT data space now, or set up a trigger that invokes a dump of the current address space and VIT data space and possibly a dump of a remote VTAM, when either a particular sense code or a particular message is issued:

Set the CSDUMP trigger:

➤ MODIFY — — *procname* — , — CSDUMP ➤

```

graph TD
    Start(( )) --> MSG[MESSAGE =]
    MSG --> MID(message_id_number)
    MID --> IST1504I[IST1504I]
    IST1504I --> REMOTE1{REMOTE = NO/YES}
    REMOTE1 --> MSG
    
    MSG --> I1504I(message_value_field)
    I1504I --> REMOTE2{REMOTE = NO/YES}
    REMOTE2 --> MSG
    
    MSG --> MID2(message_id_number)
    MID2 --> I1504I2(message_value_field)
    I1504I2 --> REMOTE3{REMOTE = NO/YES}
    REMOTE3 --> MSG
  
```

_____ TCPNAME _____ TCPIP Jobname _____

$\left. \begin{array}{l} \text{--- MATCHLIM ---} \\ \text{--- MATCHLIM ---} \end{array} \right\} = 1$

Notes:

¹ MSGVALUE is valid only when the MESSAGE operand is used and specifies either message IST2391I, IST2406I or IST2419I.

Tip: You can use the CSDUMP start option to set a CSDUMP message trigger, a sense code trigger, or both.

Remove the CSDUMP trigger:

➤➤ MODIFY *procname* ,CSM,MONITOR= 

F CSM command

Dynamically change the amount of storage used by the communications storage manager (CSM) or activate changes made to the CSM parmlib member without requiring an IPL:

➤➤ MODIFY — — *procname* — , — CSM — 
 

Modify CSM Monitoring as follows:

➤➤ MODIFY — — *procname* — , — CSM — , — MONITOR — = 

F DEFAULTS command

Modify the DLOGMOD value for a resource:

➤➤ MODIFY — — *procname* — , — DEFAULTS — , — ID — = — *resource_name* — , →

Change the delay timer for disconnection of a switched PU:

➤➤ MODIFY — — *procname* — , — DEFAULTS — , — ID — = — *resource_name* — , →

F DEFINE command

Set session limits to zero:

►► MODIFY — — *procname* — , — DEFINE — , — ID — = — *appl_name* — , — DLIMITS — = ►

► (— 0 — , — 0 — , — 0 —) — , — LOGMODE — = — *logon_mode_name* — , →

LUNAME — = — *lu_name*

, — AUTOSSES — = — *number_of_winner_sessions*

$$\text{--- DRESPL ---} = \text{--- ALLOW ---}$$

$$\text{--- NALLOW ---}$$

Set session limits to nonzero:

►► MODIFY — — *procname* — , — DEFINE — , — ID — = — *appl_name* — , — DLIMITS — = ►

► (— *dseslim* — , — *dminwinl* — , — *dminwinr* —) — , — LOGMODE — ⇒

► *logon_mode_name* — , — LUNAME — = — *lu_name* ►

— , — AUTOSSES — = — *number of winner sessions* —

The diagram shows a horizontal line with arrows at both ends. Above the line, a bracket spans from the start to a point labeled 'DELETE = NALLOW'. Below the line, a bracket spans from the start to a point labeled 'DELETE = ALLOW'. A third bracket below the line spans from the 'ALLOW' point to the end, labeled 'NALLOW'. This indicates that 'DELETE' is mapped to 'NALLOW' in the first case and 'ALLOW' in the second case, with 'NALLOW' being the final state.

$$\text{--- DRESPL ---} = \text{--- ALLOW ---}$$

$$\text{--- NALLOW ---}$$

Use existing session limits:

```

>> MODIFY — — procname — , — DEFINE — , — ID — = — appl_name — , — LOGMODE —>

      > = — logon_mode_name — , — LUNAME — = — lu_name —>

      { — , — AUTOSSES — = — number_of_winner_sessions — }

      { — , — DELETE — = — NALLOW — }
      { — , — DELETE — = — ALLOW — }
      { — , — DELETE — = — NALLOW — }

      { — , — DRESPL — = — ALLOW — }
      { — , — DRESPL — = — NALLOW — }

```

Delete an unusable LU-mode entry:

```

>> MODIFY — — procname — , — DEFINE — , — ID — = — appl_name — , — LUNAME — = —>

      > — lu_name — , — DELETE — = — UNUSE —>

```

F DIRECTORY command

Change the ownership of APPN resources in the directory database:

```

>> MODIFY — — procname — , — DIRECTORY — , — FUNCTION — = — UPDATE — , — ID —>

      > = — cdrsc_major_node_name —>
      { — resource_name — }

      { — , — CPNAME — = — new_cp_name — }
      { — ( — new_cp_name — , — old_cp_name — ) — }
      { — , — NETSRVR — = — server_name — }
      { — , — CPNAME — = — new_cp_name — }
      { — ( — new_cp_name — , — old_cp_name — ) — }
      { — , — NETSRVR — = — server_name — }

```

Delete a resource from the directory database:

```

>> MODIFY — — procname — , — DIRECTORY — , — FUNCTION — = — DELETE — , — ID —>

      > = — cdrsc_major_node_name —>
      { — resource_name — }

```

F DR command

Delete a logical unit from a physical unit, or a physical unit from a line:

```

>> MODIFY — — procname — , — DR — , — TYPE — = — DELETE —>

      > — , — ID — = — lu_name — , — FROM — = — pu_name —>
      { — , — ID — = — pu_name — , — FROM — = — line_name — }

```

Move a physical unit:

➤➤ MODIFY — — *procname* — , — DR — , — TYPE — = — MOVE — , — ID — = — *pu_name* ➔

➤ , — FROM — = — *line_name* — , — TO — = — *line_name* ➔

➤ { , — ACTIVATE — = — NO — } ➔

➤ { , — ACTIVATE — = — NO — } ➔

➤ { , — ACTIVATE — = — YES — } ➔

➤ { , — ADDR — = — *link_station_address* — } ➔

F ENCR command

Change the cryptography specifications for logical units:

➤➤ MODIFY — — *procname* — , — ENCR — = — { COND — , — ID — = — *lu_name* ➔

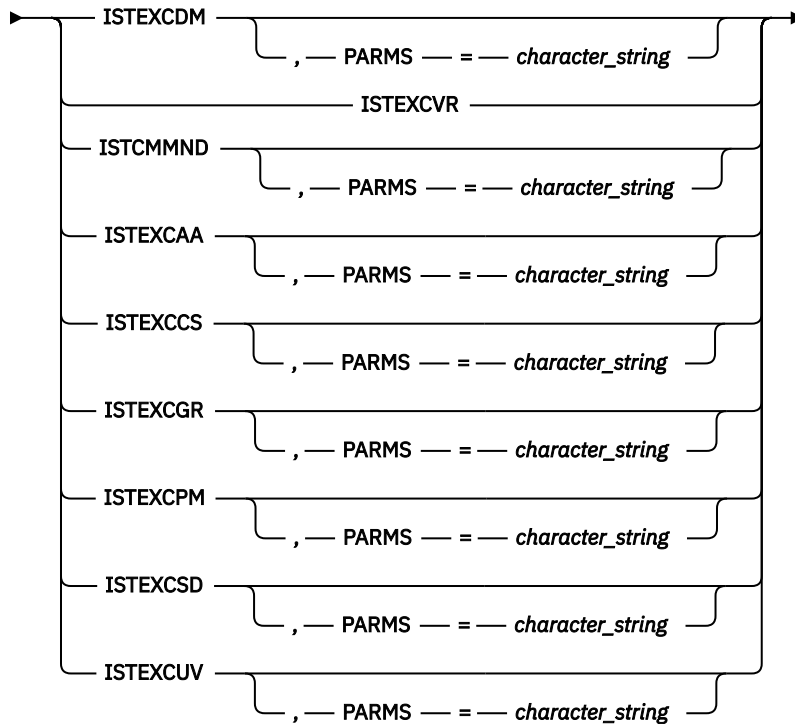

➤➤ { OPT — } ➔

➤➤ { REQD — } ➔

F EXIT command

Activate or replace an exit routine:

► MODIFY — — *procname* — , — **EXIT** — , — **OPTION** — = — ACT — , — ID — = ►
REPL

Activate a multiple instance of ISTEXCPM:

➤ **MODIFY** — — *procname* — , — **EXIT** — , — **OPTION** — = — **ACT** — , — **ID** — = ➡

► ISEXCPM — . — *instance_name* — , — PARMS — = — *character_string* ►

Replace a multiple instance of ISTEXCPM:

►► MODIFY — — *procname* — , — EXIT — , — OPTION — = — REPL — , — ID — =►

► ITEXCPM — . — *instance_name* — , — MODULE — = — *module_name*

_____, ____ PARS = ____ *character string* ____

Deactivate an exit routine:

➤ MODIFY — — *procname* — , — EXIT — , — OPTION — = — INACT — , — ID — = ➔
FORCE

Deactivate a multiple instance of ISTEEXCPM:

➤ MODIFY — — *procname* — , — EXIT — , — OPTION — = — INACT — , — ID — = ➔
FORCE

F GR command

Delete a generic resource:

➤ MODIFY — — *procname* — , — GR — , — GNAME — = — *netid.generic_resource* — , ➔

➤ OPTION — = — DELETE ➤

F IMR command

Start intensive mode recording:

Stop intensive mode recording:

F INOPCODE command

Controls the dump attribute of VTAM INOPCODEs:

Notes:

1. When specifying an InOpCode for the second parameter, always specify three digits by including any leading zeros.
2. If an InOpCode is specified for the second parameter, the first parameter cannot be ALL.

F INOPDUMP command

Controls the automatic dumping of VTAM when an inoperative condition occurs in one of VTAMs data link control layers:

F IOPD command

Change the I/O problem determination (IOPD) time-out interval:

➤ MODIFY — — *procname* — , — IOPD — , — IOINT — = — *number_of_seconds* ➤

F IOPURGE command

Set a time interval after which outstanding I/O is assumed to be lost and recovery steps are taken:

➤ MODIFY — — *procname* — , — IOPURGE — = — *timeout_value* ➤

F LINEDEF command

Dynamically change the definition of a redefinable line:

➤ MODIFY — — *procname* — , — LINEDEF — , — ID — = — *line_name* — , — USE — = — ➤

F LL2 command

Start a continuous link level 2 test:

➤ MODIFY — — *procname* — , — LL2 — , — ID — = — *name* — , — OPTION — = — CONT ➤

Start a brief link level 2 test:

➤ MODIFY — — *procname* — , — LL2 — , — ID — = — *name* ➤

Stop a link level 2 test:

➤ MODIFY — — *procname* — , — LL2 — , — ID — = — *name* — , — OPTION — = — CANCEL ➤

F MSGMOD command

Specify whether VTAM messages contain an identifier that indicates the VTAM module that originated the message:

➤ MODIFY — — *procname* — , — MSGMOD — = NO ➤
YES

F NOTNSTAT command

Terminate global or TRLE tuning statistics:

➤➤ MODIFY — — *procname* — , — NOTNSTAT ➡

[illegible]

F NOTRACE command

Stop a buffer contents trace:

```
►► MODIFY — — procname — , — NOTRACE — , — TYPE — = — BUF — , — ID — = ►
```

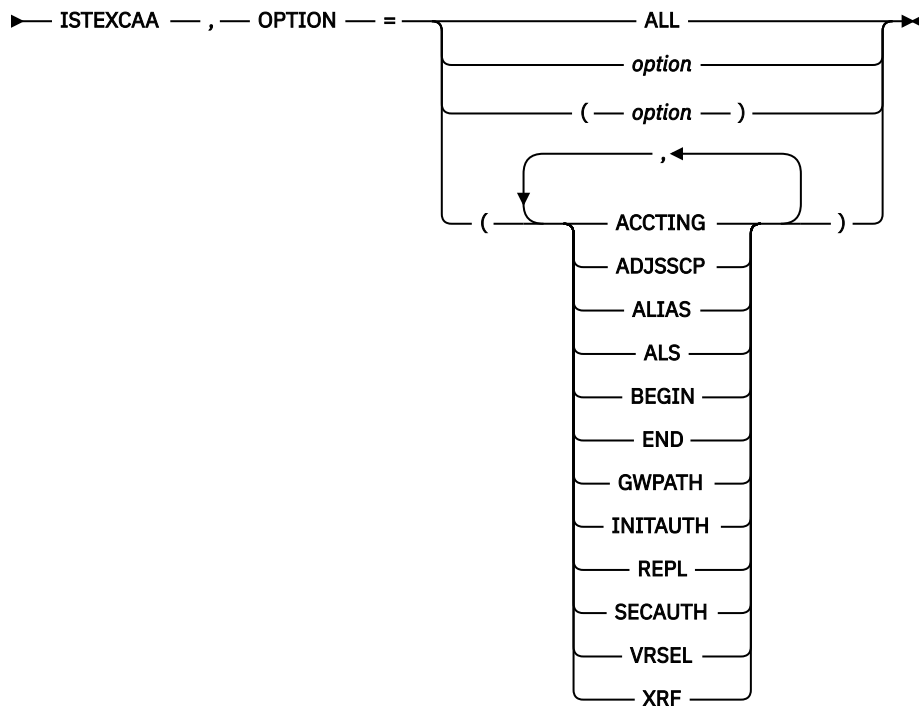

Diagram illustrating the scope of the expression "SCOPE = ONLY". The diagram shows two parallel paths, both starting with a triangle and ending with a double arrow. The top path is labeled "SCOPE = ONLY". The bottom path is labeled "SCOPE = ONLY" with "ALL" below it.

Stop a communication network management trace:

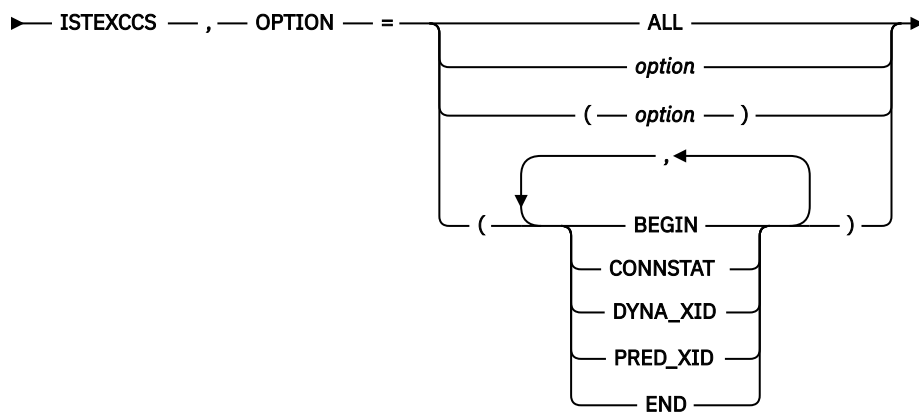

```
➡➡ MODIFY — — procname — , — NOTRACE — , — TYPE — = — CNM — , — ID — = ➡➡
```

Stop a user Exit buffer trace:

➤➤ MODIFY — — *procname* — , — NOTRACE — , — TYPE — = — EXIT — , — ID — = ➤

➤➤ MODIFY — — *procname* — , — NOTRACE — , — TYPE — = — EXIT — , — ID — = ➤

►► MODIFY — — *procname* — , — NOTRACE — , — TYPE — = — EXIT — , — ID — = ►

Stop an input/output trace:

►► MODIFY — — *procname* — , — NOTRACE — , — TYPE — = — IO — , — ID — = ►

Stop a module trace:

➤ MODIFY — — *procname* — , — NOTTRACE — , — TYPE — = — MODULE — , — OPTION — ➔

OSA-Express2 adapter:

➤ MODIFY — — *procname* — , — NOTTRACE — , — TYPE — = — QDIOSYNC ➔

Stop the APPN route selection trace in a network node:

➤ MODIFY — — *procname* — , — NOTTRACE — , — TYPE — = — ROUTE ¹ ➔

Notes:

¹ TYPE=ROUTE is allowed only in a network node.

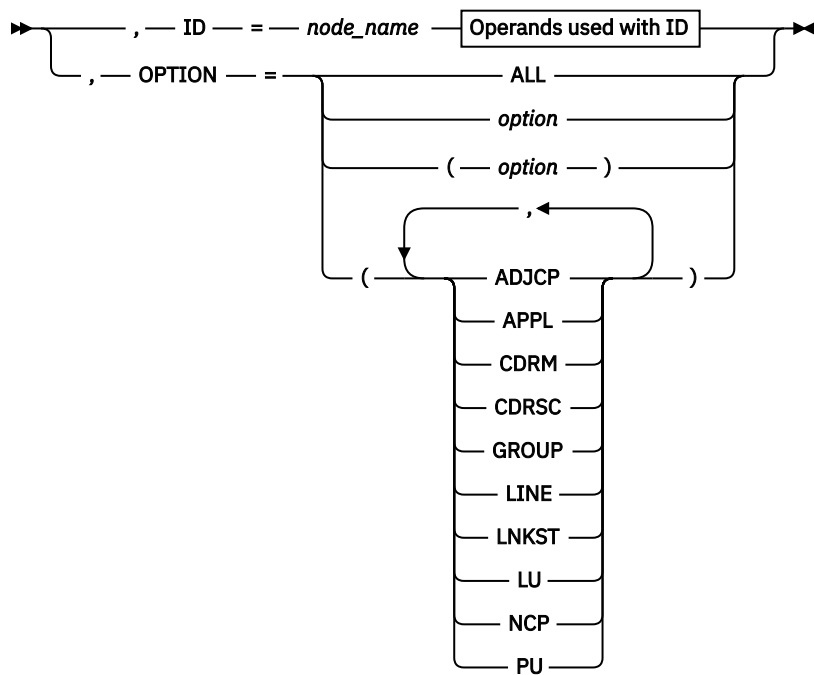

Stop an SMS (buffer use) trace:

➤ MODIFY — — *procname* — , — NOTTRACE — , — TYPE — = — SMS ➔

Stop a resource state trace:

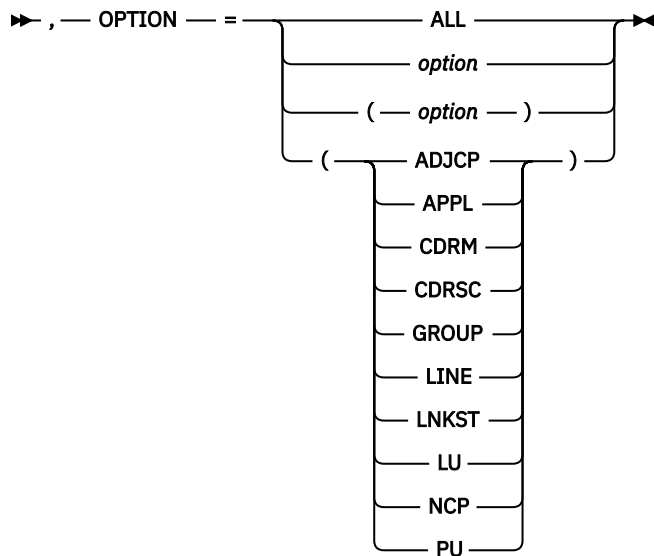

➤ MODIFY — — *procname* — , — NOTTRACE — , — TYPE — = — STATE ➔

Operands used with ID

OPTION Operand

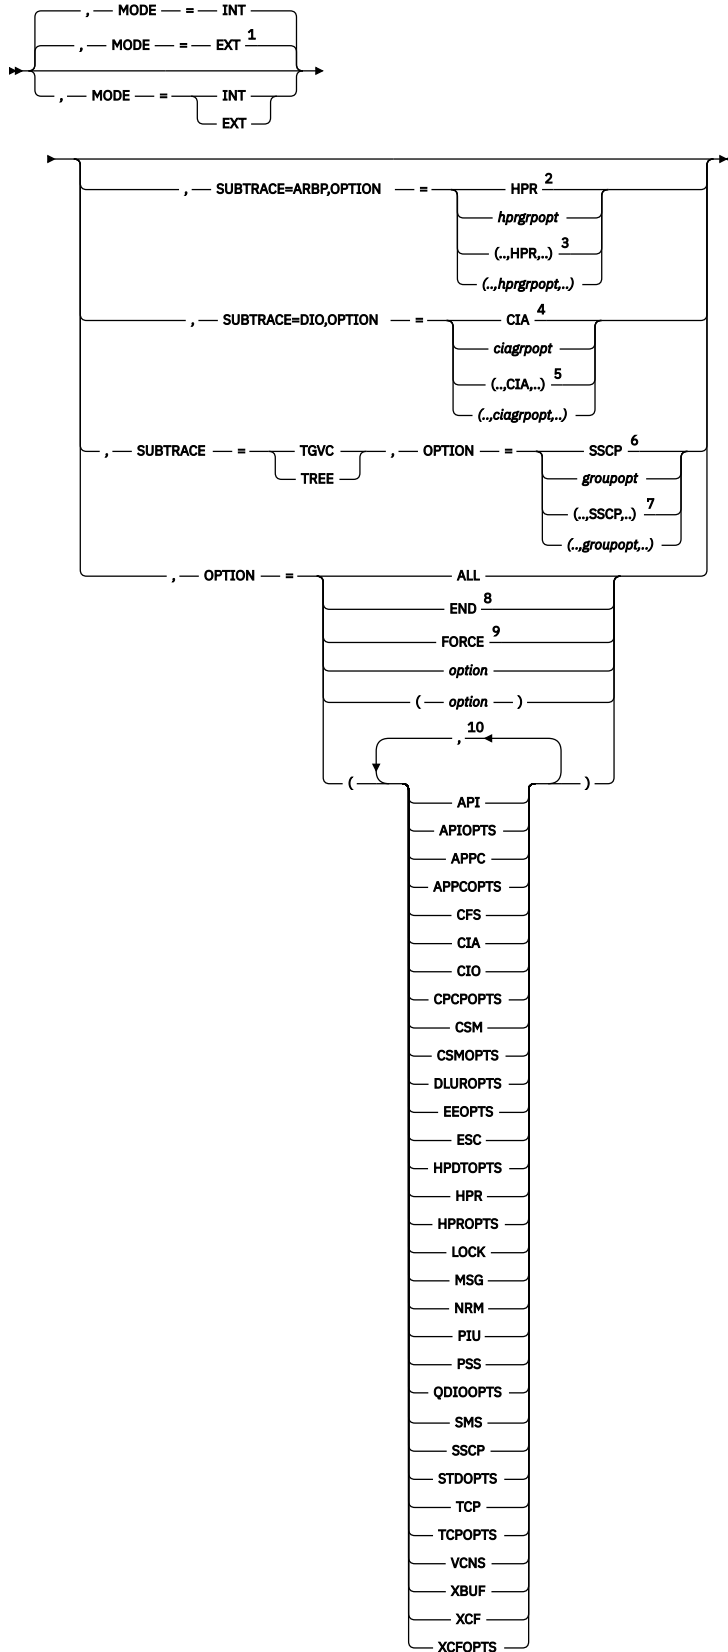

Stop a TSO user ID trace:

MODIFY procname , NOTRACE , TYPE = TSO , ID = tso_user_id

Stop a VTAM internal trace:

➤ MODIFY — — *procname* — , — NOTRACE — , — TYPE — = — VTAM ➤

Notes:

¹⁰ For internal recording (MODE=INT), VTAM manages and displays the setting of the API, CIO, MSG,NRM, PIU and SSCP VIT options based on the level of VIT control being used. See [z/OS Communications Server: SNA Diagnosis Vol 2, FFST Dumps and the VIT](#) for details.

Add or change the ADJLIST value for a cross-domain resource:

➤ MODIFY — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , →
 ➤ ADJLIST — = — *list_name* — , — ACTION — = — UPDATE ➤

Delete the ADJLIST value for a cross-domain resource:

➤ MODIFY — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , →
 ➤ ADJLIST — = — *list_name* — , — ACTION — = — DELETE ➤

Change the error message display option for an APPL or CDRSC:

➤ MODIFY — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , →
 ➤ SIRFMSG — = —
 ┌ OLUSSCP — ➤
 ├ ALLSSCP —
 ├ STARTOPT —
 └ NONE —

Change the delay timer for disconnection of a switched PU:

➤ MODIFY — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , →
 ➤ DISCNTIM — = — *time_period* ➤

Change the number of search requests for a resource:

➤ MODIFY — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , →
 ➤ SRCOUNT — = — *number_of_search_requests* ➤

Change the value of the search reduction timer for a resource:

➤ MODIFY — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , →
 ➤ SRTIMER — = — *number_of_seconds* ➤

Reset the search reduction entry for a resource:

➤ MODIFY — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , →
 ➤ SRCLEAR — = — YES ➤

Modify the registration value for a resource:

➤ MODIFY — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , →
 ➤ REGISTER — = —
 ┌ CDSERVR — ➤
 ├ NETSRVR —
 └ NO —

Modify the ASRCVLM value for an application program:

➤ MODIFY — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , →
 ➤ ASRCVLM — = — *amount_of_storage* ➤

Modify the MODSRCH value for a model application program:

➤➤ MODIFY — — *procname* — , — RESOURCE — , — ID — = — *resource_name* — , — ➤

F RTP command

Request that VTAM search for the best high performance routing (HPR) route, based on transmission group weight, between the two endpoints of a rapid transport protocol (RTP) connection:

➤➤ MODIFY — — *procname* — , — RTP — , — ID — = — *rtp_pu_name* ➤➤

F SECURITY command

Increase the cryptography specification for an LU:

➤➤ MODIFY — — *procname* — , — SECURITY — , — ID — = — *lu_name* — , — ENCR — = ➤➤

Notes:

¹ ENCRTYPE cannot be downlevel. If the current value is TDES24, MODIFY SECURITY ENCRTYPE=DES will not be allowed.

Modify which cryptographic key name is used for an LU:

➤➤ MODIFY — — *procname* — , — SECURITY — , — ID — = — *lu_name* — , — CKEY — = ➤➤

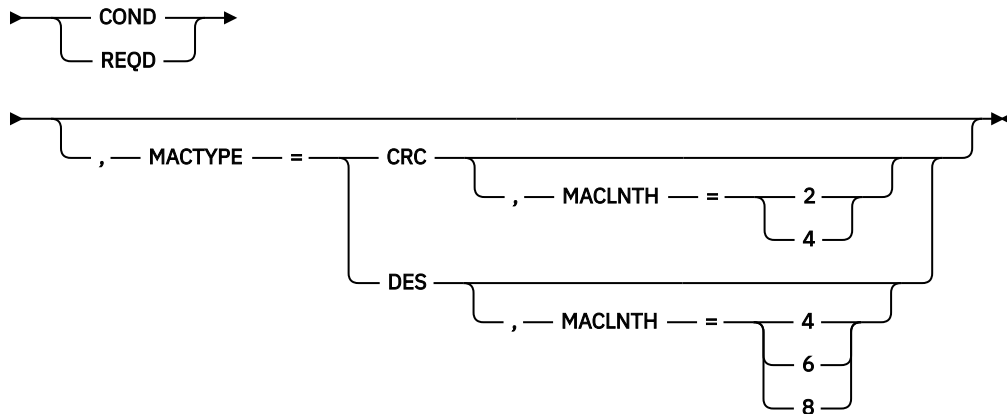

Initiate SLU authentication for an LU:

➤➤ MODIFY — — *procname* — , — SECURITY — , — ID — = — *lu_name* — , — CERTIFY — = ➤➤

Increase the message authentication specification for an LU:

➤➤ MODIFY — — *procname* — , — SECURITY — , — ID — = — *lu_name* — , — MAC — = ➤➤

F SUPP command

Change the message suppression level after VTAM has been started:

F TABLE command

Change resource associations or load a new table and associate it with a resource (other than a CoS table):

➤➤ MODIFY — — *procname* — , — TABLE — , — OPTION — = — ASSOCIATE — , — ID — = ➤➤

➤ — *name* — , — NEWTAB — = — *new_table_name* — , — OLDTAB — = ➤

Change resource association with a CoS table or load a new CoS table and associate it with a resource:

➤➤ MODIFY — — *procname* — , — TABLE — , — OPTION — = — ASSOCIATE — , — TYPE ➤➤

➤ = — COSTAB — , — NETID — = — *netid* — , — ORIGIN — = — *ncp_name* — , ➤

➤ — NEWTAB — = — *new_table_name* ➤

Delete resource associations:

➤➤ MODIFY — — *procname* — , — TABLE — , — OPTION — = — DELETE — , — TYPE — = ➔

Load a table to replace an existing table (other than a filter table):

➤➤ MODIFY — — *procname* — , — TABLE — , — OPTION — = — LOAD — , — NEWTAB — = ➔

Load a filter table to replace an existing filter table:

➤➤ MODIFY — — *procname* — , — TABLE — , — OPTION — = — LOAD — , — TYPE — = ➔

F TGP command

Change the transmission group (TG) profile associated with a 2.1 connection:

➤➤ MODIFY — — *procname* — , — TGP — , — TGPNAME — = — *tg_profile_name* ➔

F TNSTAT command

Initiate global or TRLE tuning statistics. Also used to alter the CNSL and TIME tuning statistics values.

F TOPO command

Delete a node at a network node:

Delete a transmission group:

Modify the status of a node for route calculation at a network node:

Modify the status a transmission group for route calculation:

► MODIFY — — *procname* — , — TOPO — , — FUNCTION — = $\begin{matrix} \text{NORMAL} \\ \text{QUIESCE} \end{matrix}$, →

► ORIG — = — *cp_name* — , — DEST — = — *cp_name* — , — TGN — = — *tg_number* ►

Diagram illustrating the mapping of the `SCOPE` parameter to `LOCAL` and `NETWORK` options:

- Top path: `, --SCOPE = LOCAL`
- Bottom path: `, --SCOPE = LOCAL` and `NETWORK`

Clear Enterprise Extender connection network unreachable partner information on a network node:

►► MODIFY — — *procname* — , — TOPO — , — FUNCTION — = — CLRUNRCH →

[illegible]

Rule: The ORIG, VRN, and DEST operands are optional on the MODIFY *procname*,TOPO,FUNCTION=CLRUNRCH command; however, at least one of these three operands must be specified.

Clear APPN routing tree information:

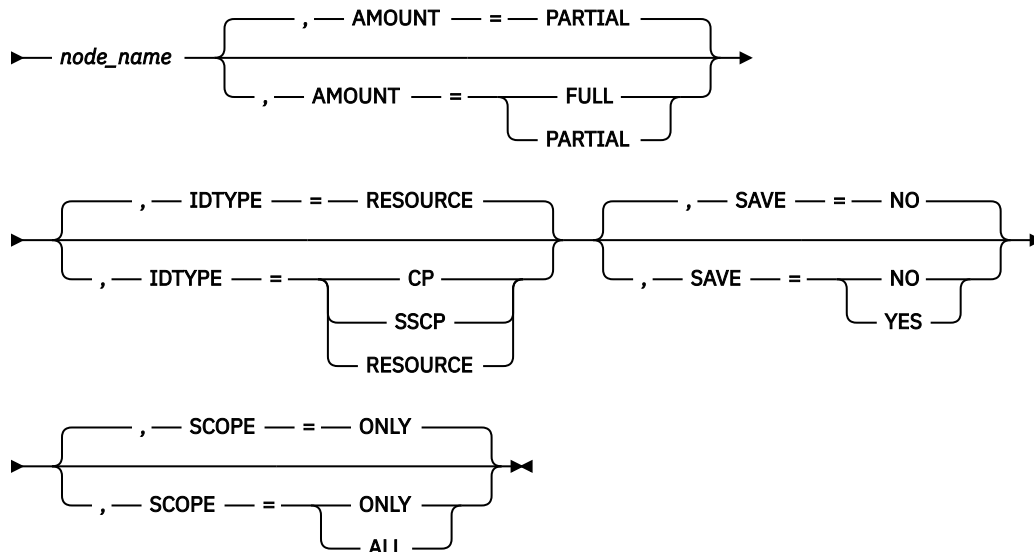

►► MODIFY — — *procname* — , — TOPO — , — FUNCTION — = — CLRTREES ◄◄

Rule: The values FUNCTION=CLRUNRCH and FUNCTION=CLRTREES are valid on the MODIFY*procname*,TOPO command only when the command is issued on a network node.

F TRACE command

Start or modify a buffer contents trace:

➤➤ MODIFY — — *procname* — , — TRACE — , — TYPE — = — BUF — , — ID — = — ➤

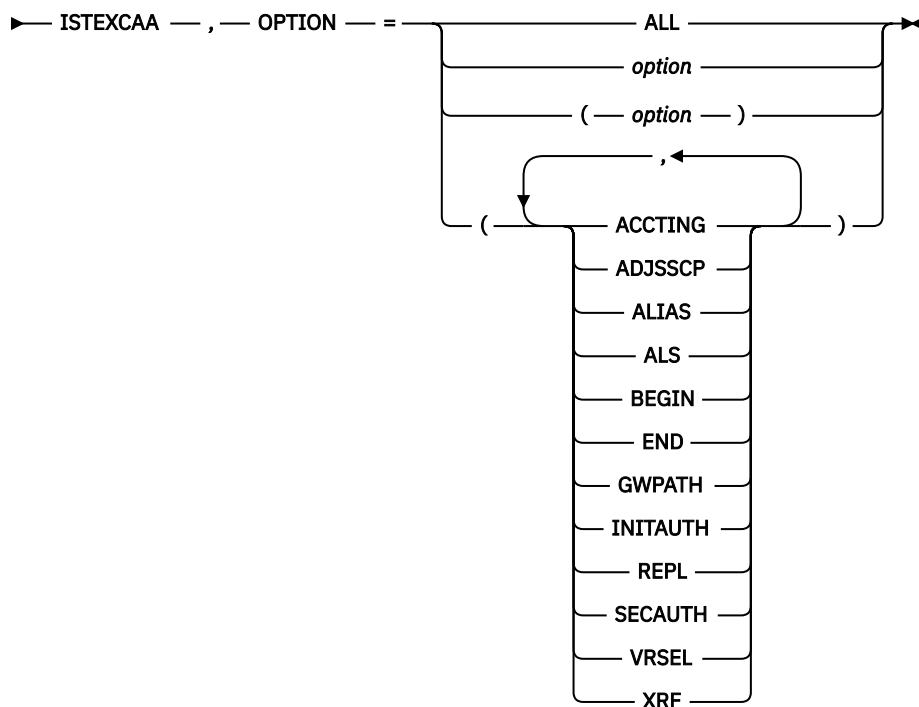

Start or modify a communication network management trace:

➤➤ MODIFY — — *procname* — , — TRACE — , — TYPE — = — CNM — , — ID — = — ➤

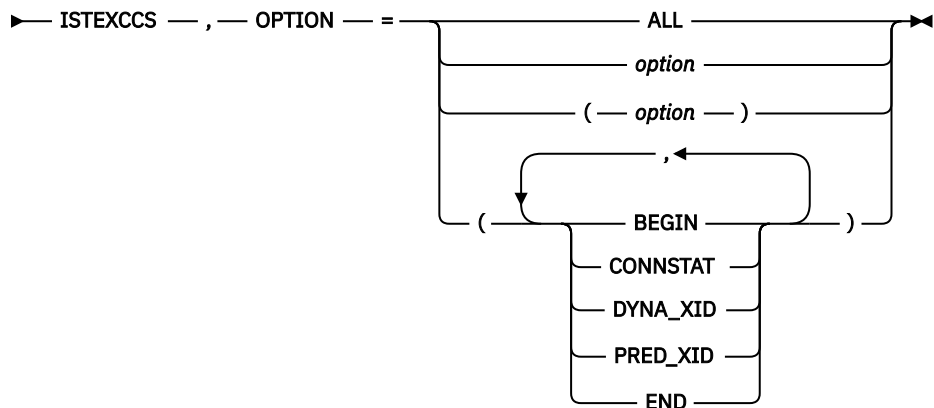

Start or modify a user Exit buffer trace:

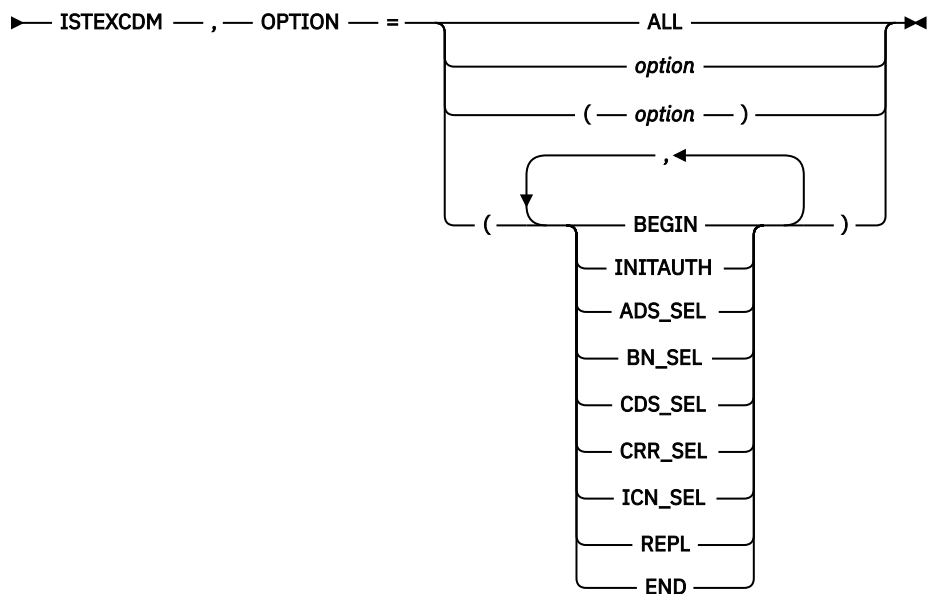

➤➤ MODIFY — — *procname* — , — TRACE — , — TYPE — = — EXIT — , — ID — = — ➤

➤➤ MODIFY — — *procname* — , — TRACE — , — TYPE — = — EXIT — , — ID — = ➤➤

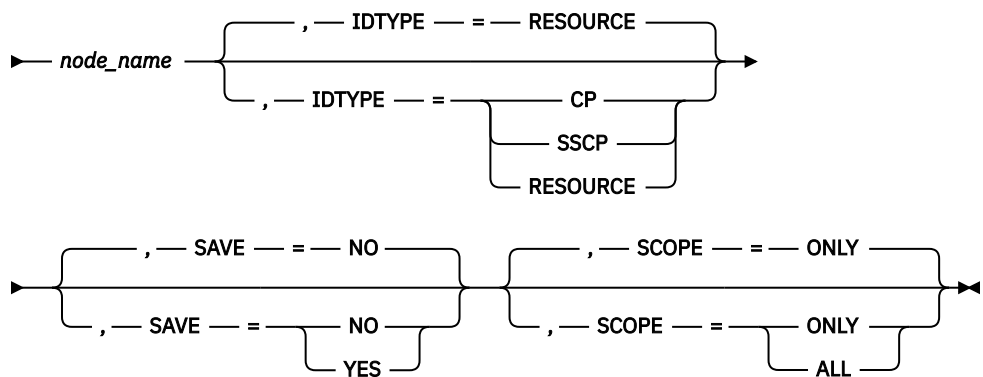

➤➤ MODIFY — — *procname* — , — TRACE — , — TYPE — = — EXIT — , — ID — = ➤➤

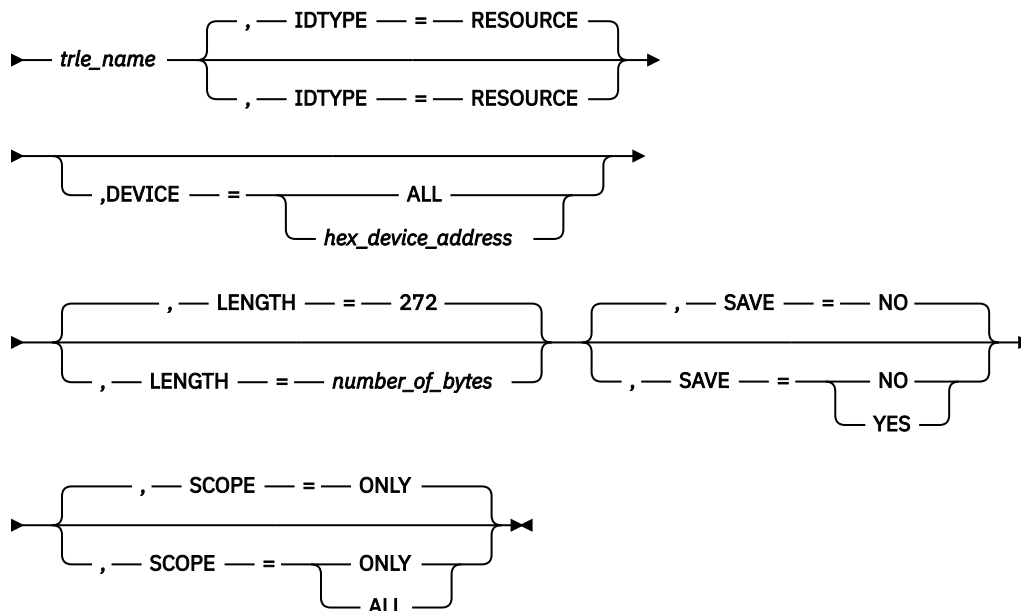

Start or modify an input/output trace:

➤➤ MODIFY — — *procname* — , — TRACE — , — TYPE — = — IO — , — ID — = ➤➤

Start or modify an input/output trace for a TRLE with the DATAPATH operand coded:

►► MODIFY — — *procname* — , — TRACE — , — TYPE — = — IO — , — ID — = —►

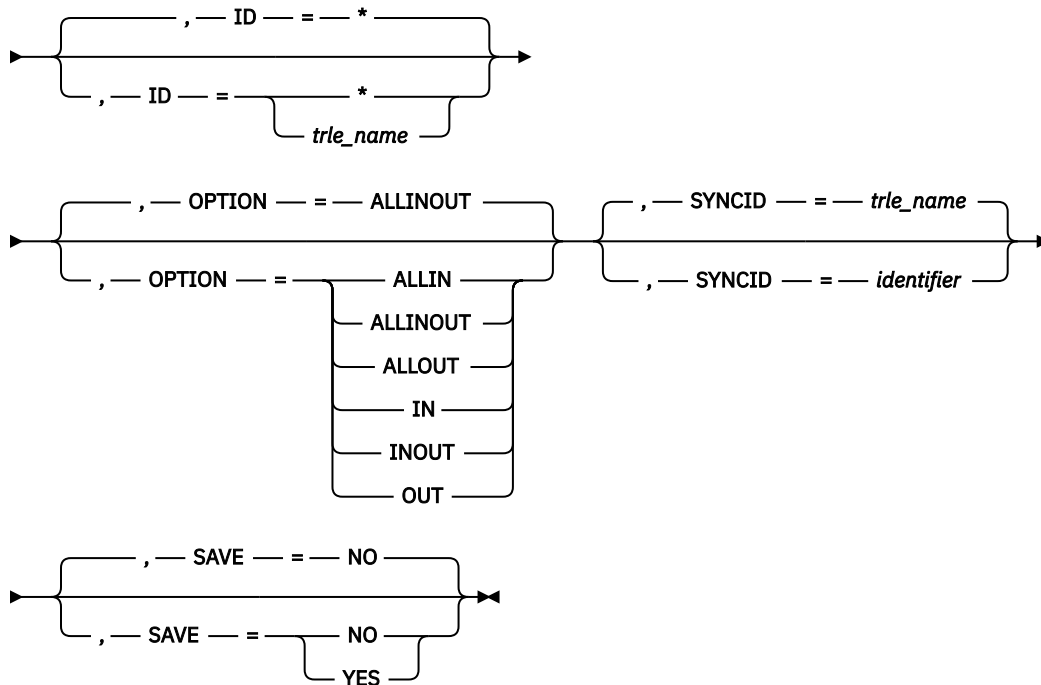

Start or modify a module trace:

►► MODIFY — — *procname* — , — TRACE — , — TYPE — = — MODULE — , — OPTION — = —►

Start or modify OSA-Express2 diagnostic data synchronization for an OSA-Express2 adapter:

➤➤ MODIFY — — *procname* — , — TRACE — , — TYPE — = — QDIOSYNC ➔

Start the APPN route selection trace in a network node:

➤➤ MODIFY — — *procname* — , — TRACE — , — TYPE — = — ROUTE ¹ ➔

Notes:

¹ TYPE=ROUTE is allowed only in a network node.

² The initial default value for BFRNUM is 100. When the initial value has been set, it remains until the value is changed with BFRNUM specified on another MODIFY TRACE command.

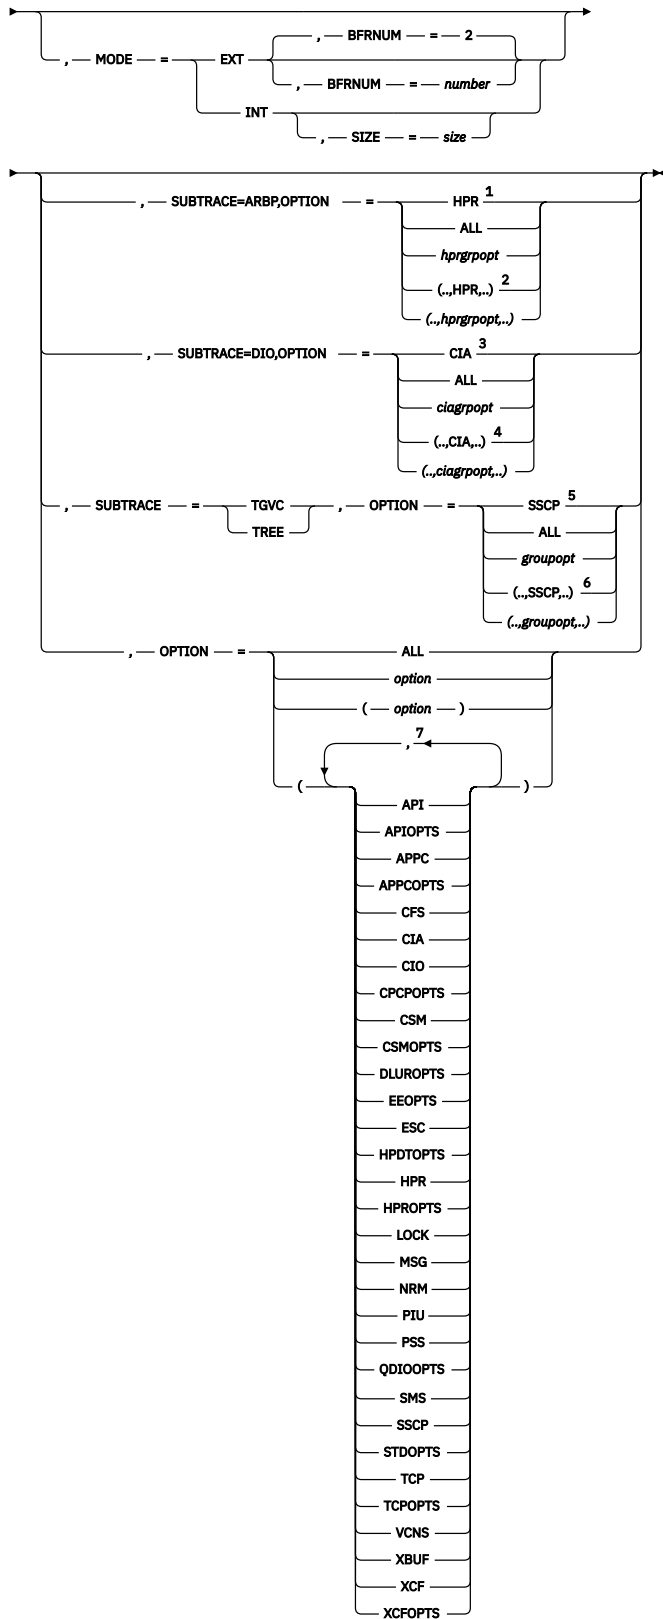

Start or modify a TSO user ID trace:

➤➤ MODIFY — — *procname* — , — TRACE — , — TYPE — = — TSO — , — ID — = ➔

➔ *tso_user_id* ➔

Start or modify the VTAM internal trace:

➔ MODIFY — , — *procname* — , — TRACE — , — TYPE — = — VTAM ➔

Notes:

¹ When you specify SUBTRACE=ARBP and you code a single OPTION value, the OPTION value must be HPR, ALL, or one of the group options (*hprgrpopt*) that include HPR as an individual option

equivalent. The applicable group options are DLUROPTS, EEOPTS, HPDТОPTS, HPROPTS, QDIOOPTS, and XCFOPTS.

² When SUBTRACE=ARBP is coded and you code multiple trace options in parentheses, you must code either HPR or one of the group options (*hprgrpopt*) that include HPR as an individual option equivalent inside the parentheses.

³ When you specify SUBTRACE=DIO and you code a single OPTION value, the OPTION value must be CIA, ALL, or one of the group options (*ciagrpopt*) that include CIA as an individual option equivalent. The applicable group options are EEOPTS, HPDТОPTS, HPROPTS, QDIOOPTS, TCPOPTS and XCFOPTS.

⁴ When SUBTRACE=DIO is coded and you code multiple trace options in parentheses, you must code either CIA or one of the group options (*ciagrpopt*) that include CIA as an individual option equivalent inside the parentheses.

⁵ When you code SUBTRACE=ТGVC or SUBTRACE=TREE and you code a single OPTION value, the OPTION value must be either SSCP, ALL, or one of the group options (*groupopt*), all of which include SSCP as an individual option equivalent. The group options are APIOPTS, APPCOPTS, CPCOPTS, CSМOPTS, DLUROPTS, EEOPTS, HPDТОPTS, HPROPTS, QDIOOPTS, STDОPTS, TCPOPTS, and XCFOPTS.

⁶ When you code SUBTRACE=ТGVC or SUBTRACE=TREE and you code multiple trace options in parentheses, you must code either SSCP or one of the group options (*groupopt*) inside the parentheses.

⁷ If you are operating in VIT Control FULL mode and you specify any of the group options (*groupopt*), the STDОPTS group option is also started. See [z/OS Communications Server: SNA Diagnosis Vol 2, FFST Dumps and the VIT](#) for more information on VIT control options.

F USERVAR command

Create a new USERVAR:

➤ MODIFY — — *procname* — , — USERVAR — , — ID — = — *uservar_name* ➔

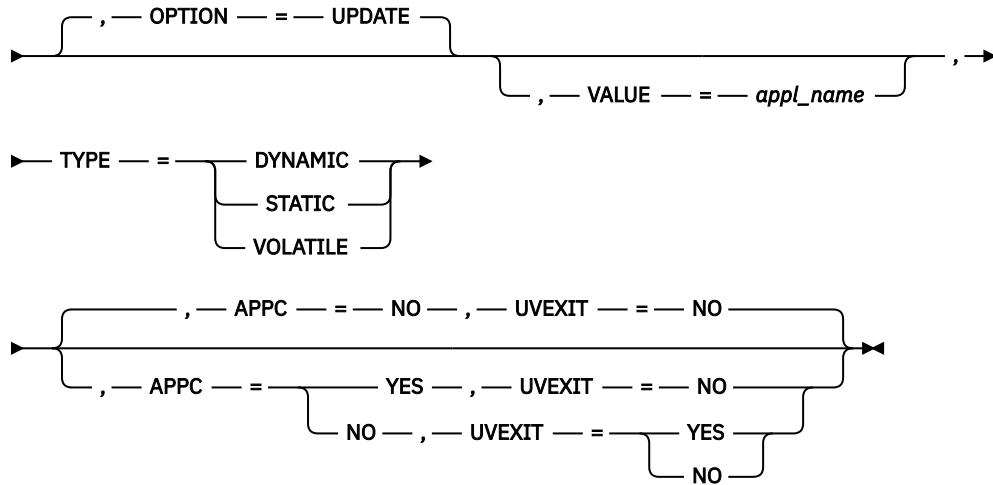

┌ — , — OPTION — = — UPDATE — ┐
└──────────────────────────────────┘ , — VALUE — = — *appl_name* ➔

┌ — , — TYPE — = — DYNAMIC — ┐
└──────────────────────────────────┘
┌ — , — TYPE — = — DYNAMIC — ┐
└──────────────────────────────────┘
┌ — STATIC — ┐
└──────────┘
┌ — VOLATILE — ┐
└──────────┘

┌ — , — APPC — = — NO — , — UVEXIT — = — NO — ┐
└──┘
┌ — , — APPC — = — YES — , — UVEXIT — = — NO — ┐
└──┘
┌ — NO — , — UVEXIT — = — YES — ┐
└──────────────────────────────────┘
┌ — NO — ┐

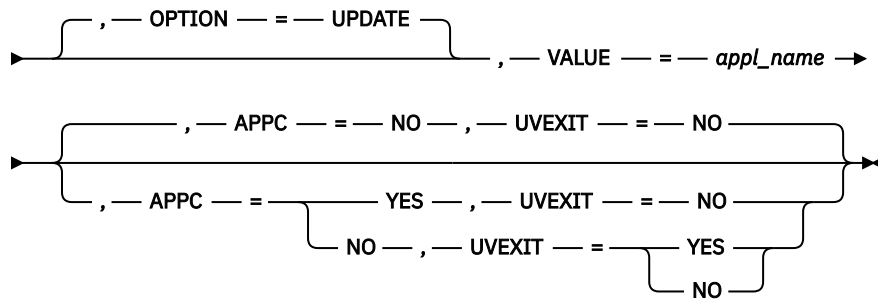

Update an existing USERVAR and change the TYPE:

➤➤ MODIFY — — *procname* — , — USERVAR — , — ID — = — *uservar_name* →

Update an existing USERVAR, leaving the TYPE unchanged:

➤➤ MODIFY — — *procname* — , — USERVAR — , — ID — = — *uservar_name* →

Delete a USERVAR:

➤➤ MODIFY — — *procname* — , — USERVAR — , — ID — = — *uservar_name* — , — OPTION →

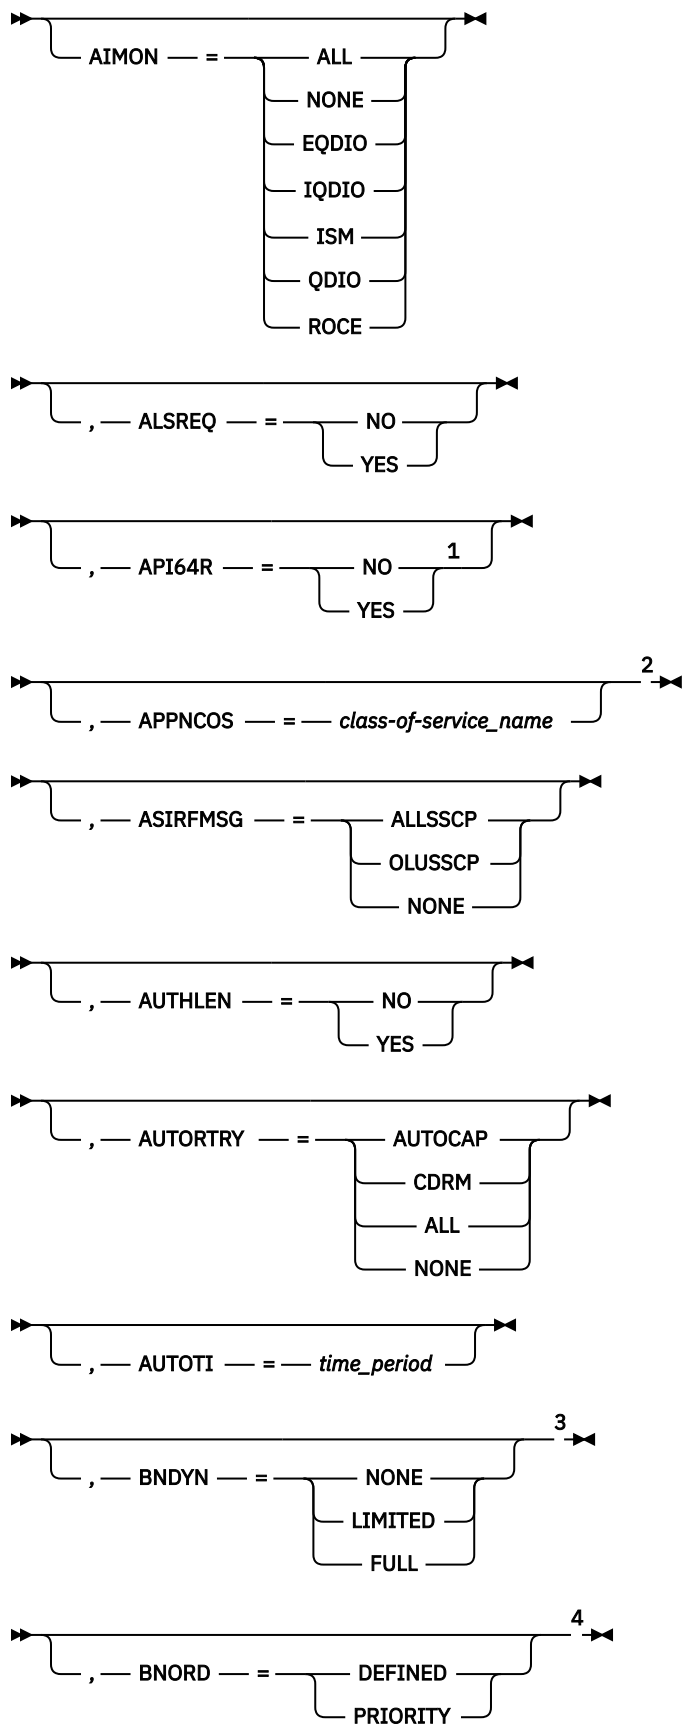

F VTAMOPTS command

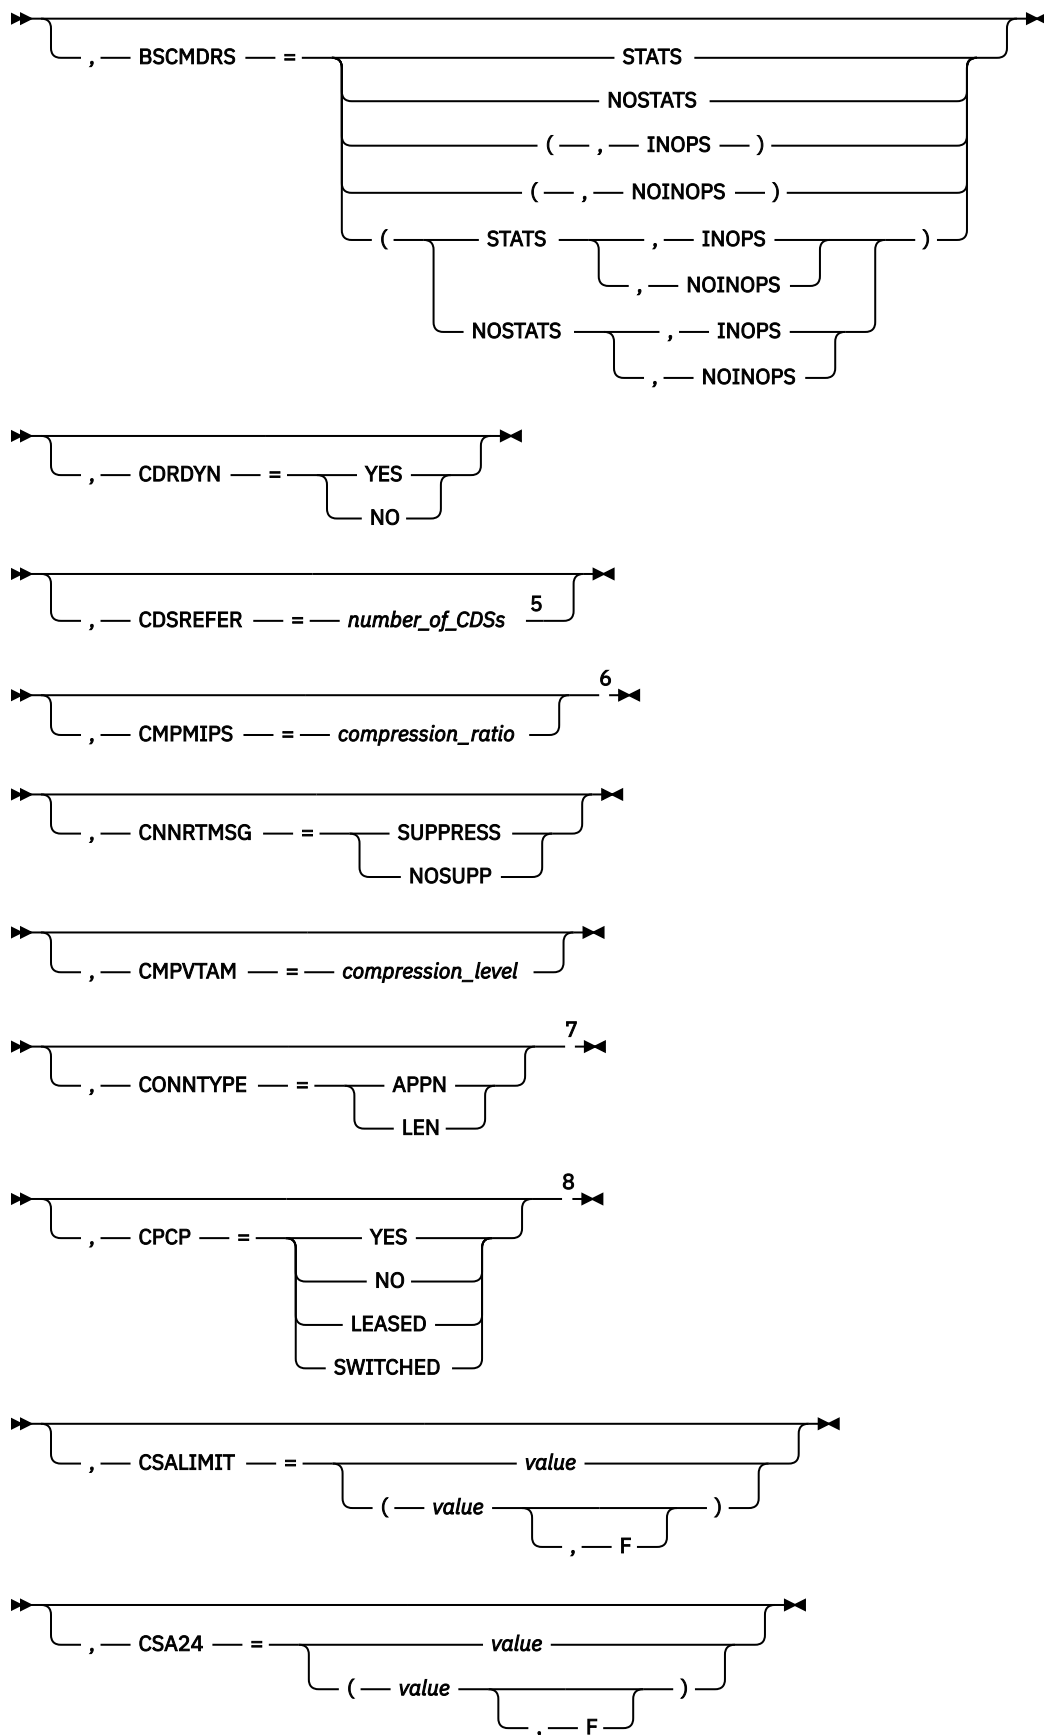

Change certain values that might have been specified on VTAM start options:

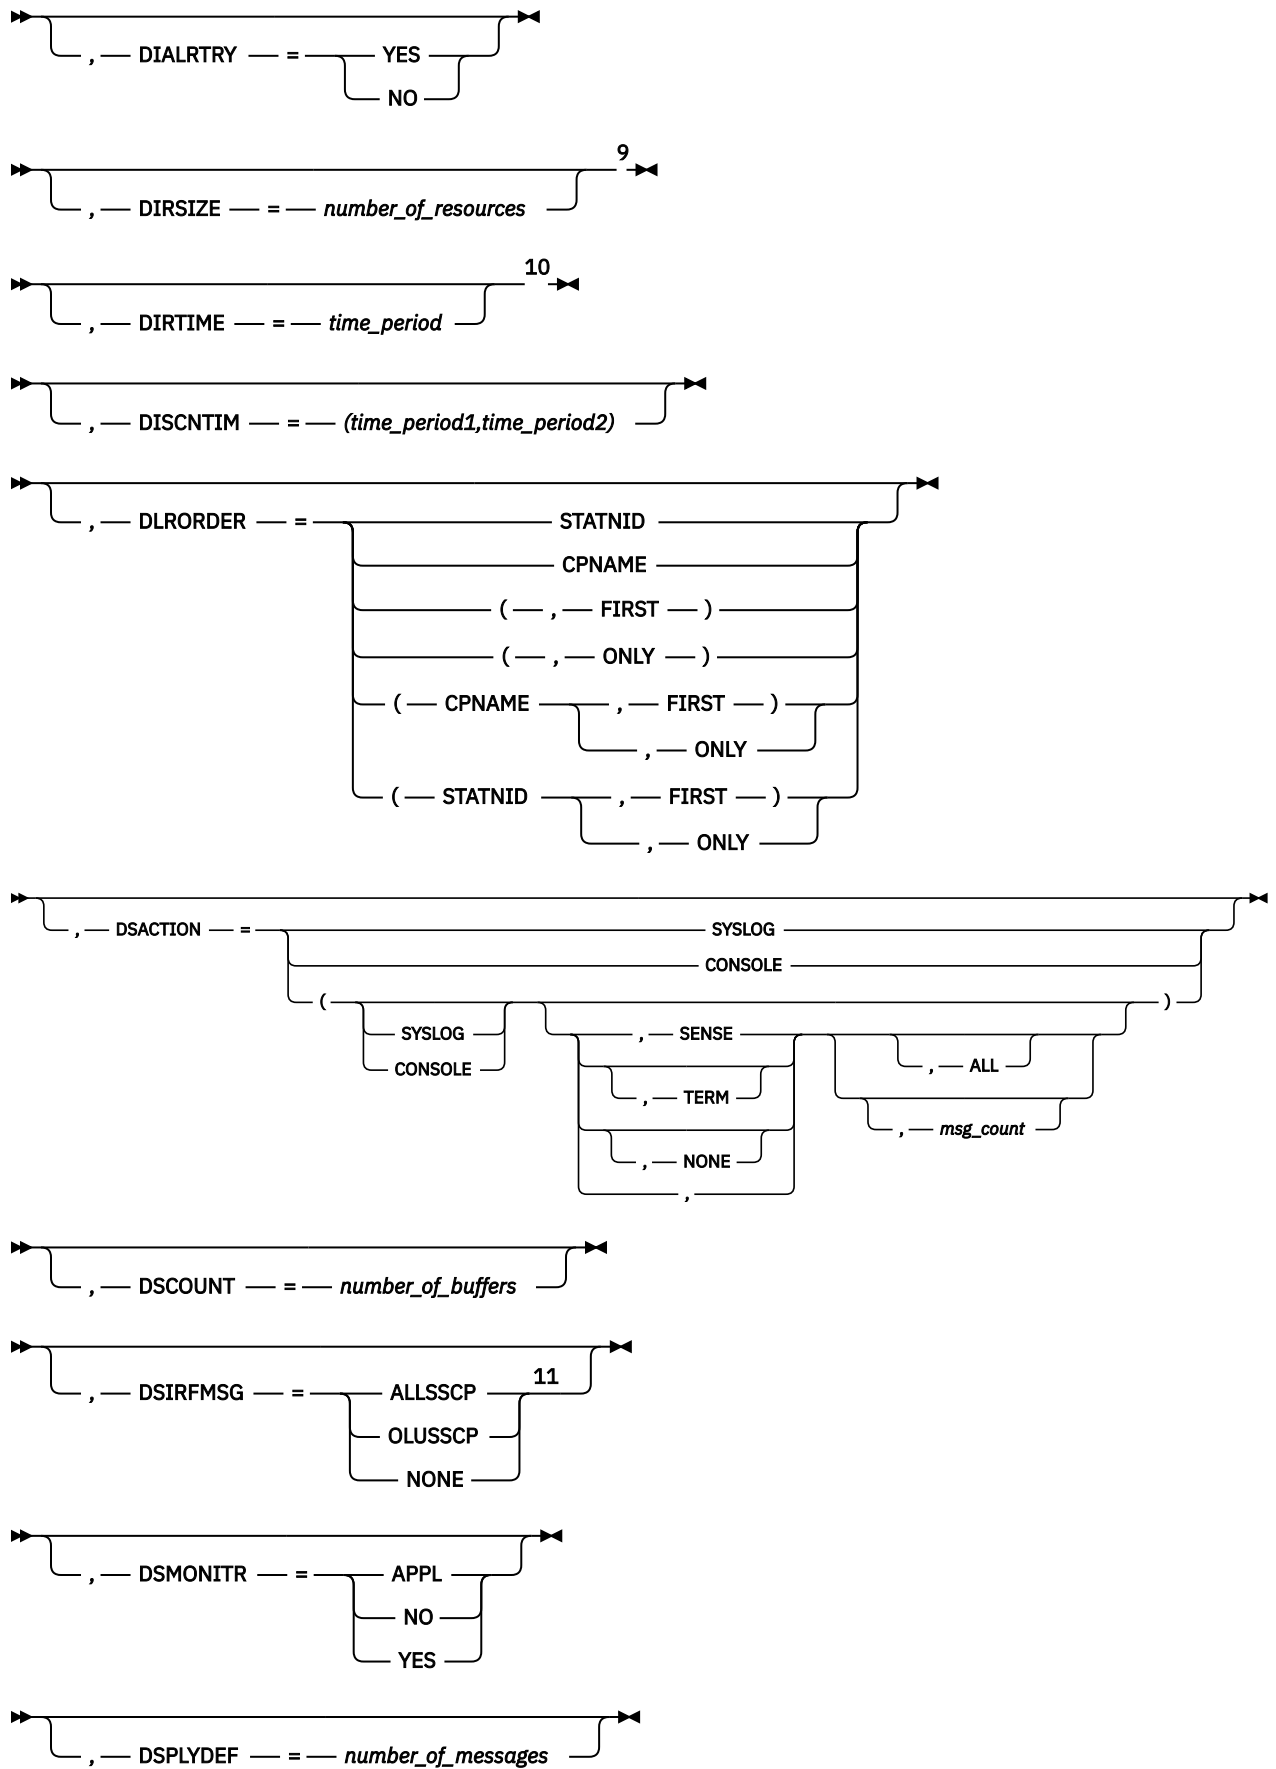

➤➤➤

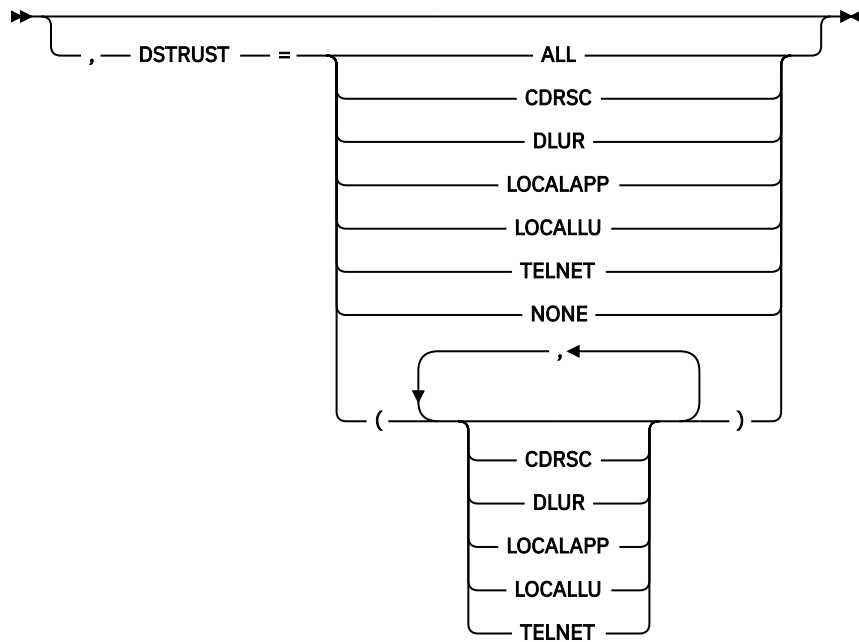

➤➤ MODIFY — — *procname* — , — VTAMOPTS →

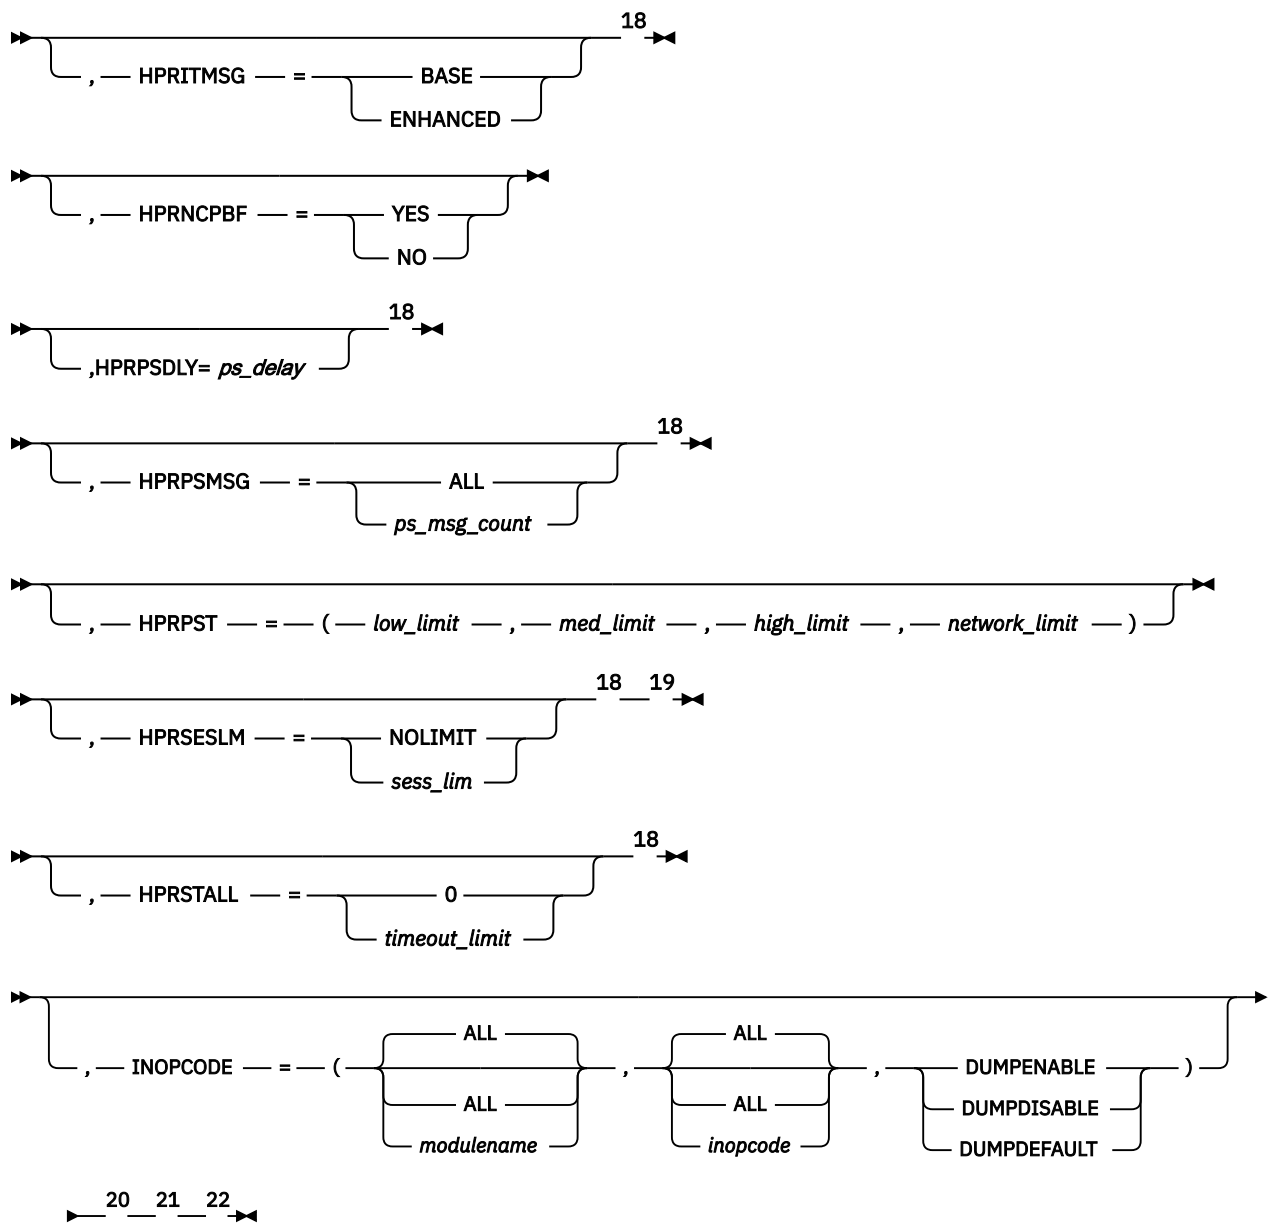

Diagram illustrating the structure of the `IOINT` command:

```

, — IOINT — = — number_of_seconds —

```

Diagram illustrating the structure of the `IOMSGLIM` command:

```

, — IOMSGLIM — = — number_of_message_pairs —

```

Diagram illustrating the structure of the `IOPURGE` command:

```

, — IOPURGE — = — timeout_value —

```

Diagram illustrating the structure of the `IPADDR` command:

```

, — IPADDR — = — ip_address 24 —

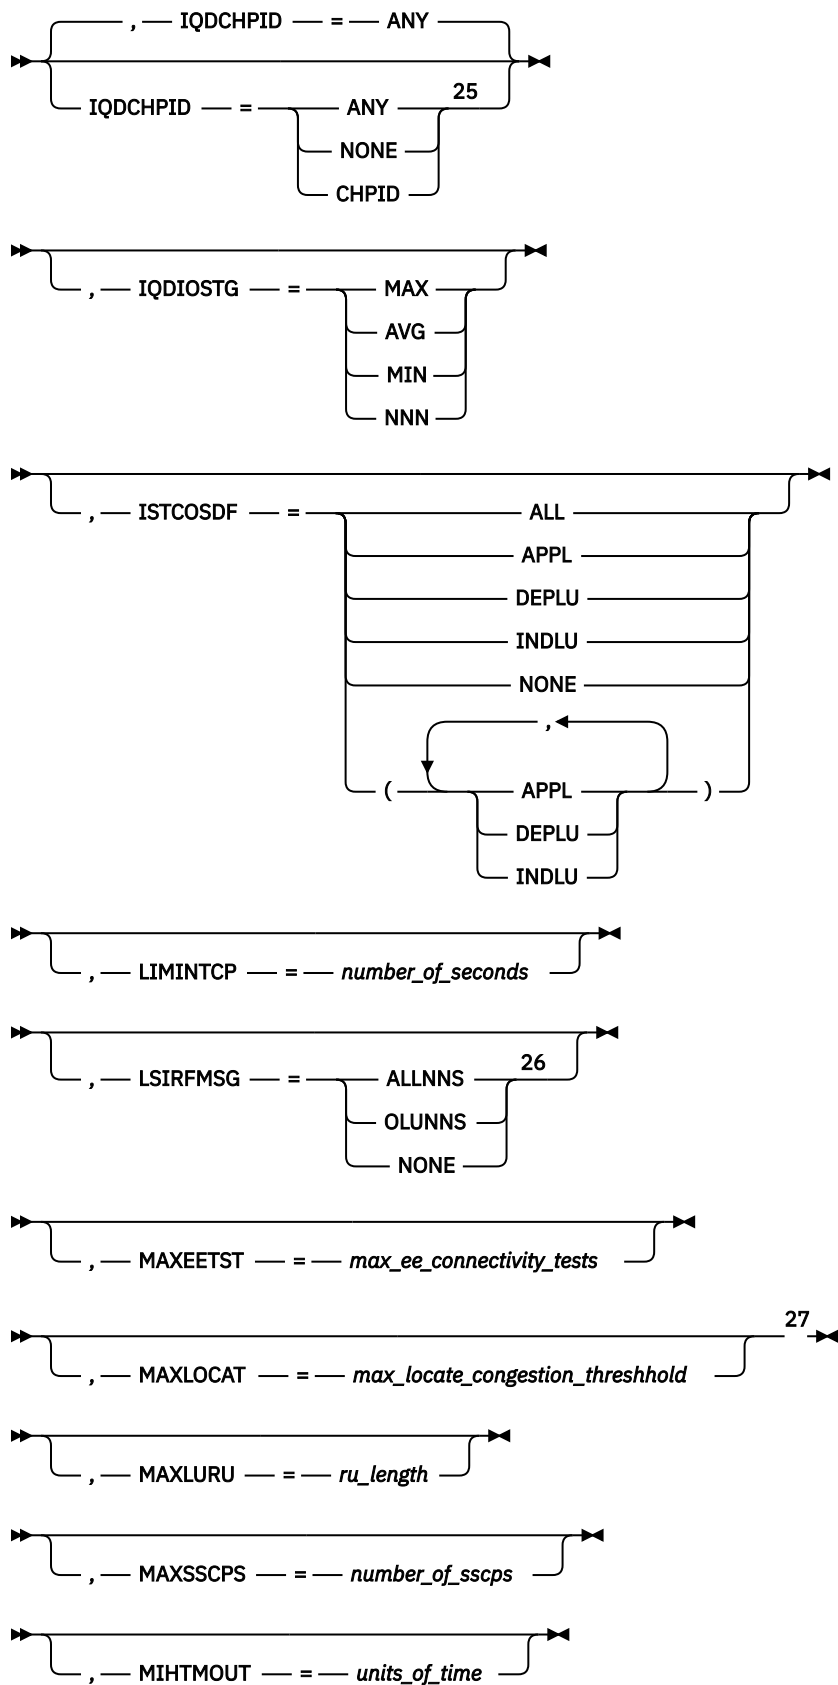

```

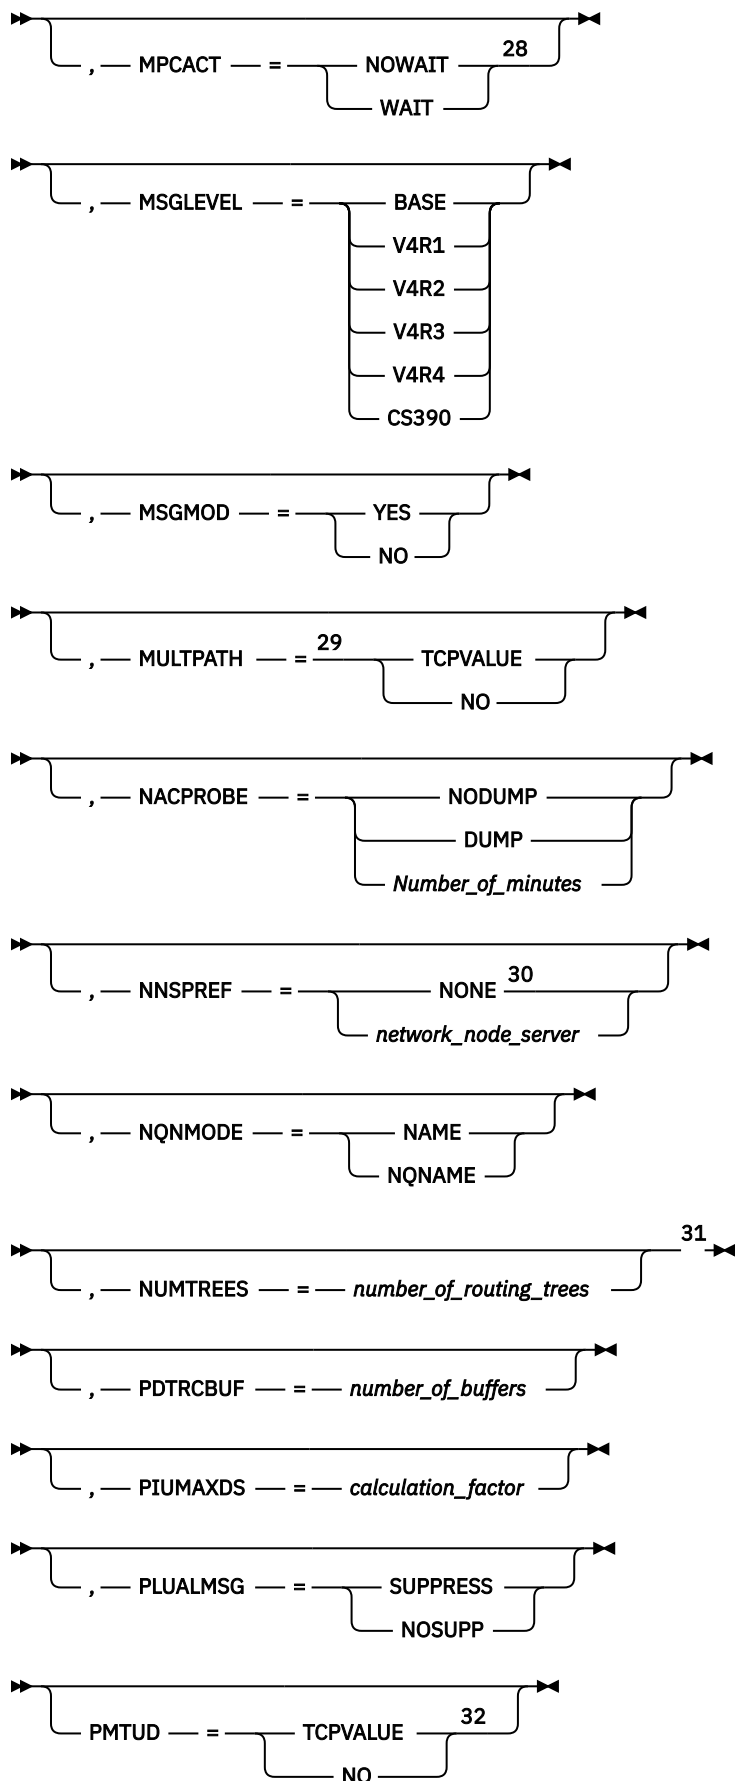

Diagram illustrating the structure of the `IPINFO` command:

```

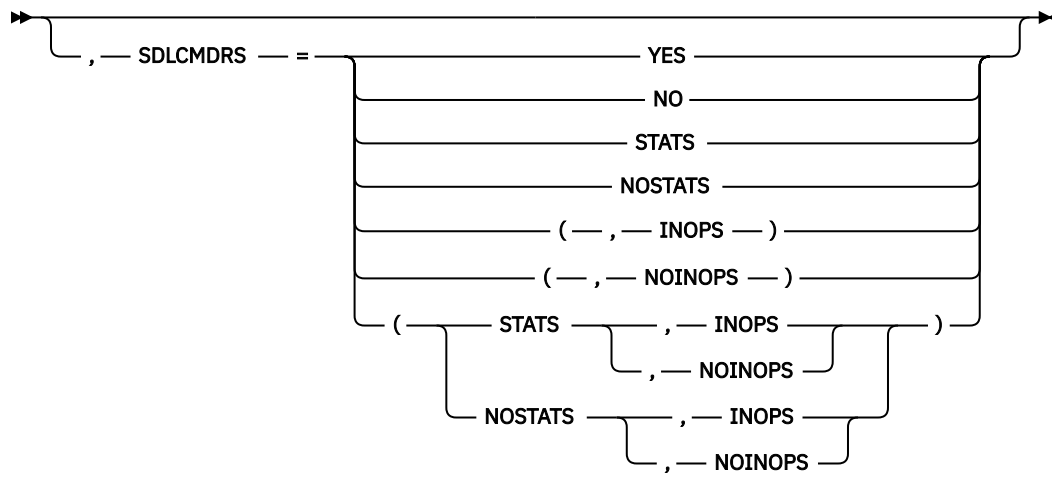

, — IPINFO — = — SENDALL — SNDLOCAL — DISPONLY — NONE —

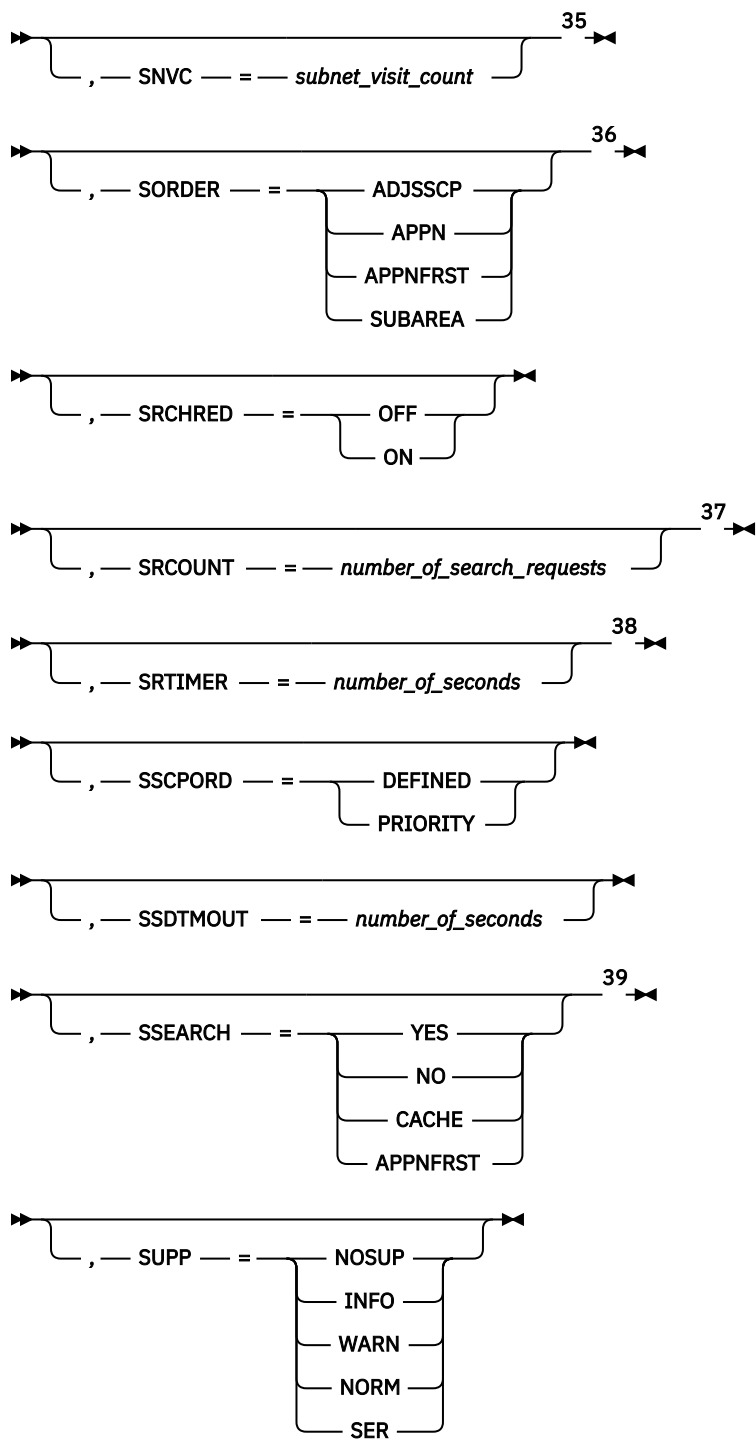

```

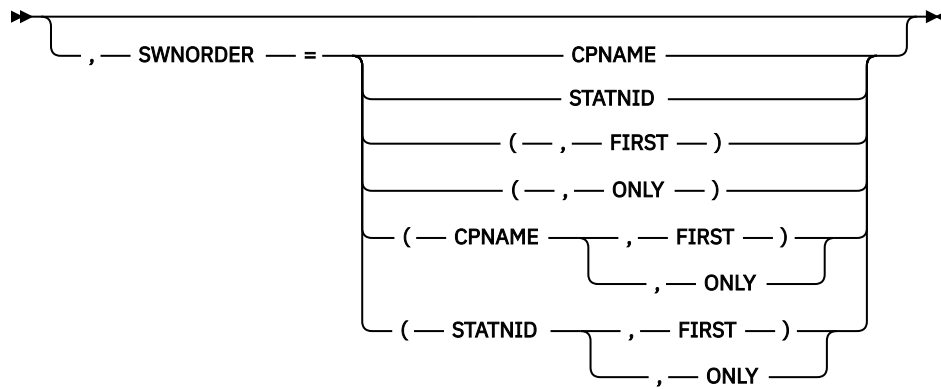

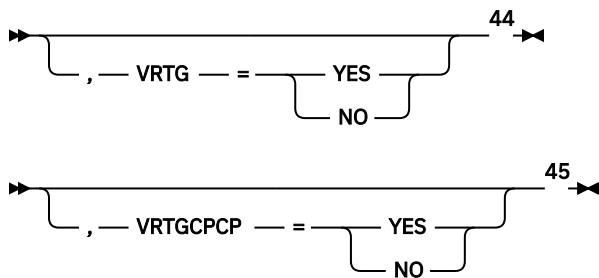

Notes:

- ¹ API64R can be modified only when running in z/Architecture® mode.
- ² APPNCOS can be modified only if NODETYPE was specified during VTAM START processing.
- ³ BNDYN can be modified only if BN=YES was specified during VTAM START processing.
- ⁴ BNORD can be modified only if BN=YES was specified during VTAM START processing.
- ⁵ CDSREFER can be modified only if NODETYPE=NN and CDSERVER=NO were specified during VTAM START processing.
- ⁶ CMPMIPS is meaningful only if the value for CMPVTAM is greater than 1.
- ⁷ CONNTYPE can be modified only if NODETYPE was specified during VTAM START processing.
- ⁸ CPCP can be modified only if NODETYPE was specified during VTAM START processing.
- ⁹ DIRSIZE can be modified only if NODETYPE=NN was specified during VTAM START processing.
- ¹⁰ DIRTIME can be modified only if NODETYPE=NN was specified during VTAM START processing.
- ¹¹ Because of the volume of messages that can be generated, it is not recommended that this option be enabled during normal operation. Instead, it is recommended that this option be enabled (using the MODIFY VTAMOPTS command) on all necessary hosts only when trying to diagnose specific problems. After the problem has been diagnosed or documentation has been collected, this option should be disabled once again (using the MODIFY VTAMOPTS command).
- ¹² Use the CFSIZER tool to determine the appropriate number of lists for your EZBDVIP structure, as well as, the suggested INITSIZE and SIZE values for the structure. Before you modify the DVLSTCNT option to increase the number of lists requested for the EZBDVIP structure, update your CFRM policy with the recommended INITSIZE and SIZE values. Increasing the number of lists requires more storage for the EZBDVIP structure. Make sure the same DVLSTCNT value is configured in all VTAMs in the sysplex. To enable the modified DVLSTCNT value, issue the following SETXCF MVS command to rebuild the EZBDVIP structure: **SETXCF START,REBUILD,STRNAME=EZBDVIP**. See [SETXCF command](#) in *z/OS MVS System Commands* for more information.
- ¹³ EEHPRANR is meaningful only when the NODETYPE=NN start option is also used.
- ¹⁴ The EEVERIFY start option is meaningful only if VTAM provides RTP-level HPR support. The EEVERIFY start option can be modified only if the NODETYPE start option is specified and the RTP value is specified on the HPR start option.
- ¹⁵ The ENCRYPTN start option cannot be modified if ENCRYPTN=NO was specified during VTAM START processing.
- ¹⁶ The ENSEMBLE setting is used to either permit or deny connectivity to the intraensemble data network and the intranode management network. The ensemble setting permits or denies connectivity by either allowing or denying activation of OSX and OSM interfaces. Modifying the ENSEMBLE start option does not cause z/OS Communications Server to take action on active OSX or OSM interfaces.
- ¹⁷ HOSTNAME can be modified only if NODETYPE was specified during VTAM START processing. Displays of VTAM start options will show the new value immediately; however, the new value will not be used until all Enterprise Extender lines, whose GROUP definition statements do not have HOSTNAME explicitly coded, are inactive. Any subsequent line activation from the Enterprise Extender XCA major node, whose GROUP definition statements do not have HOSTNAME explicitly coded, will make use of the new HOSTNAME start option value. The IPADDR start option, if it is in effect at the time when the MODIFY VTAMOPTS,HOSTNAME=hostname is specified, will be reset (that is, set to a value of 0.0.0.0) as part of the MODIFY processing. The value NONE can be used to clear the setting of the HOSTNAME start option. HOSTNAME and IPADDR cannot be modified using one MODIFY

VTAMOPTS command. If both start options are specified on the same MODIFY command, they will both be ignored and message IST1917I will be generated.

¹⁸ This option is meaningful only if VTAM provides RTP-level HPR support.

¹⁹ If the current value of the HPRSESLM start option is DISABLED, then the HPRSESLM value can be changed only by stopping and restarting VTAM.

²⁰ When specifying an InOpCode for the second parameter, always specify three digits by including any leading zeros.

²¹ If an InOpCode is specified for the second parameter, the first parameter cannot be ALL.

²² INOPCODE has no effect unless INOPDUMP is active for the resource when an inoperative condition is detected. See the section called MODIFY INOPCODE command in [z/OS Communications Server: SNA Operation](#) for more details.

²³ When altering the INOPDUMP VTAM start option, the resulting INOPDUMP status is propagated to all TRLEs in the TRL major node if the command is globally set, or it is propagated to a subset of resources that are identified by one or more INOPDUMP control groups. The INOPDUMP setting becomes the default status for any subsequently activated TRLEs.

²⁴ IPADDR can be modified only if NODETYPE was specified during VTAM START processing. The new value will not be used until all lines, defined with or defaulting to the old value of the IPADDR start option, in the XCA major node used for Enterprise Extender are inactive. However, displays of VTAM start options will show the new value immediately. Any subsequent line activation from the Enterprise Extender XCA major node, whose GROUP definition statement does not specify the IPADDR operand, will make use of the new IPADDR start option value. The HOSTNAME start option, if it is in effect at the time when the MODIFY VTAMOPTS,IPADDR=*ip_address* is specified, will be reset (that is, set to a value of NONE) as part of the MODIFY processing. The value of 0.0.0.0, or an IPv6 address of all zeros, usually written as ::, can be used to clear the setting of the IPADDR start option. HOSTNAME and IPADDR cannot be modified using one MODIFY VTAMOPTS command. If both start options are specified on the same MODIFY command, they will both be ignored and message IST1917I will be generated.

²⁵ The IQDCHPID option controls which IQD CHPID (and related subchannel devices) VTAM selects to dynamically build the iQDIO (IUTIQDIO) MPC group. The IUTIQDIO MPC group is used for TCP/IP dynamic XCF communications within System z®. Although this option can be modified (and the modification will immediately be displayed) while the IUTIQDIO MPC group is currently active, any modifications have the effects shown in the section called IQD CHPID modifications in [z/OS Communications Server: SNA Operation](#).

²⁶ Because of the volume of messages that can be generated, it is not recommended that this option be enabled during normal operation. Instead, it is recommended that this option be enabled (using the MODIFY VTAMOPTS command) on all necessary hosts only when trying to diagnose specific problems. After the problem has been diagnosed or documentation has been collected, this option should be disabled once again (using the MODIFY VTAMOPTS command).

²⁷ MAXLOCAT can be modified only if NODETYPE was specified during VTAM START processing.

²⁸ The option does not take effect for MPC groups that are in the process of being activated when the command is issued until those MPC groups are deactivated and reactivated.

²⁹ MULTPATH is meaningful only if the NODETYPE start option is also specified.

³⁰ NNSPREF can be modified only if NODETYPE=EN was specified during VTAM START processing.

³¹ NUMTREES can be modified only if NODETYPE=NN was specified during VTAM START processing.

³² PMTUD is meaningful only if the NODETYPE start option is also specified.

³³ RESUSAGE can be modified only if NODETYPE=NN was specified during VTAM START processing.

³⁴ ROUTERES can be modified only if NODETYPE=NN was specified during VTAM START processing.

³⁵ SNVC can be modified only if BN=YES was specified during VTAM START processing.

³⁶ SORDER can be modified only if VTAM has been started as an interchange node or a migration data host.

³⁷ SRCOUNT is meaningful only when SRCHRED=ON.

³⁸ SRTIMER is meaningful only when SRCHRED=ON.

³⁹ SSEARCH can be modified only if NODETYPE=NN was specified during VTAM START processing.

⁴⁰ TCPNAME can be modified only if NODETYPE was specified during VTAM START processing. The new value will not be used until all lines in the XCA major node used for Enterprise Extender

are inactive. However, displays of VTAM start options will show the new value immediately. Any subsequent line activation from the Enterprise Extender XCA major node will make use of the new TCPNAME value.

⁴¹ TDUDIAG is meaningful only if the NODETYPE=NN start option is also available.

⁴² UNRCHTIM is meaningful only if the NODETYPE start option is also used.

⁴³ VFYREDTI can be modified only if NODETYPE=NN was specified during VTAM START processing.

⁴⁴ VRTG can be modified only if NODETYPE and HOSTSA are specified.

⁴⁵ VRTGCPCP can be modified only if NODETYPE and HOSTSA are specified.

Starting VTAM

START command

Starting VTAM in an MVS environment:

►► START — — *procname* — , — , — , — (— Options —) — , — ASCBV31=YES — , —
 ◄◄ REUSASID=YES ◄◄

For the syntax of the start options that you can specify on this command, see [“Start options” on page 213](#)

Operator VARY commands

V ACQ command

Acquire an NCP, and optionally its subordinate resources, from another host:

►► VARY — — NET — , — ACQ — , — ID — = — *ncp_name* —►
 ◄◄ , — OWNER — = — *host_name* ◄◄ , — PUSUB —►
 ◄◄ , — ACT — Operands used with ACT ◄◄

Acquire inactive NCP, and optionally its subordinate resources, without activating them:

►► VARY — — NET — , — ACQ — , — ID — = — *ncp_name* — , — PUSUB —►

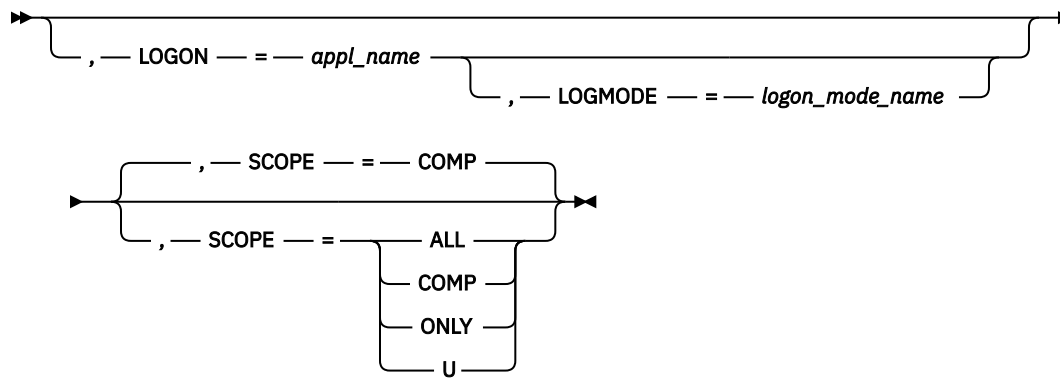

Acquire inactive NCP, and optionally its subordinate resources, and activate them:

►► VARY — — NET — , — ACQ — , — ID — = — *ncp_name* — , — ACT —►
 ◄◄ Operands used with ACT ◄◄ , — PUSUB —►
 ◄◄ , — LOADMOD — = — *load_module_name* ◄◄

Acquire nonswitched PU and its LUs:

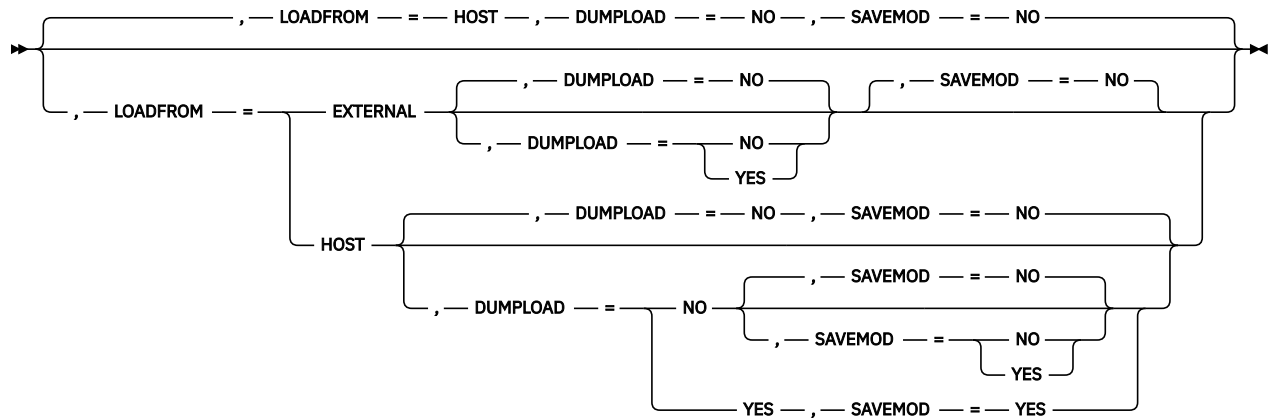

►► VARY — — NET — , — ACQ — , — ID — = — *pu_name* —►
 ◄◄ , — ACT — Operands used with ACT ◄◄

Operands used with ACT

V ACT command

LOADFROM Operand

LOADSTA Operand

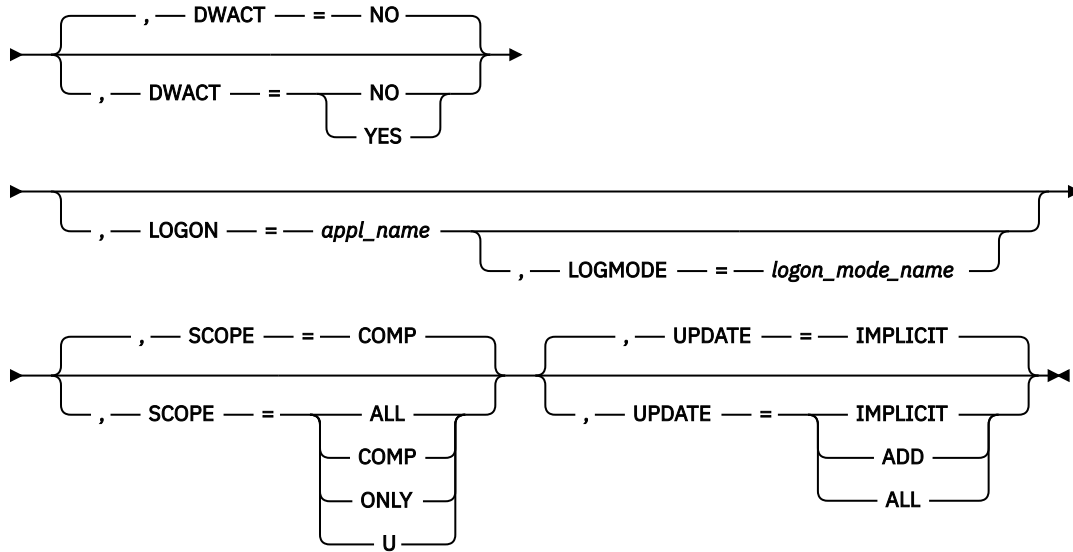

NCP Load Operands

Activate a switched major node:

►► VARY — — NET — , — ACT — , — ID — = — *major_node_name* →

Activate the dynamic XCF local SNA major node:

►► VARY — — NET — , — ACT — , — ID — = — ISTLSXCF ➤

Activate a switched line:

►► VARY — — NET — , — ACT — , — ID — = — *line_name* →

Activate a type 2.1 PU (adjacent link station) or a nonswitched line under an NCP:

►► VARY — — NET — , — ACT — , — ID — = — *pu_name* / *line_name* →

Notes:

¹ The HPR operand is valid for HPR-capable resources only.

² The U operand is valid for a local SNA PU only.

Activate a dynamic XCF local SNA PU:

►► VARY — — NET — , — ACT — , — ID — = — *name* — — IDTYPE — = — XCFCP — ►

Activate a control point (CDRSC minor node or application program minor node):

►► VARY — — NET — , — ACT — , — ID — = — *name* — ►

Activate an SSCP (CDRM minor node):

►► VARY — — NET — , — ACT — , — ID — = — *name* — ►

2 ►►

Notes:

¹ HPR and VRTGCPCP are valid only if VRTG=YES is coded for the CDRM, and the CDRM is in an inactive state.

² HPR and VRTGCPCP are valid only if VRTG=YES is coded for the CDRM, and the CDRM is in an inactive state.

Warm start a major node:

►► VARY — — NET — , — ACT — , — ID — = — *major_node_name* — , — WARM — ►

Activate a definition file (a major node with no subordinate resources):

►► VARY — — NET — , — ACT — , — ID — = — *major_node_name* — ►

Check the syntax of a definition file (major node):

►► VARY — — NET — , — ACT — , — ID — = — *major_node_name* — , — SCOPE — = — ►

Note: For an NCP major node, follow the syntax diagram for “Activating an NCP major node” and specify the UPDATE operand.

Dynamically reconfigure resources in a major node:

►► VARY — — NET — , — ACT — , — ID — = — *major_node_name* ►

Dynamically reconfigure TRLEs in a TRL major node:

►► VARY — — NET — , — ACT — , — ID — = — *trl_major_node_name* ►

Notes:

¹ Specifying UPDATE=IMPLICIT is the same as UPDATE=ADD.

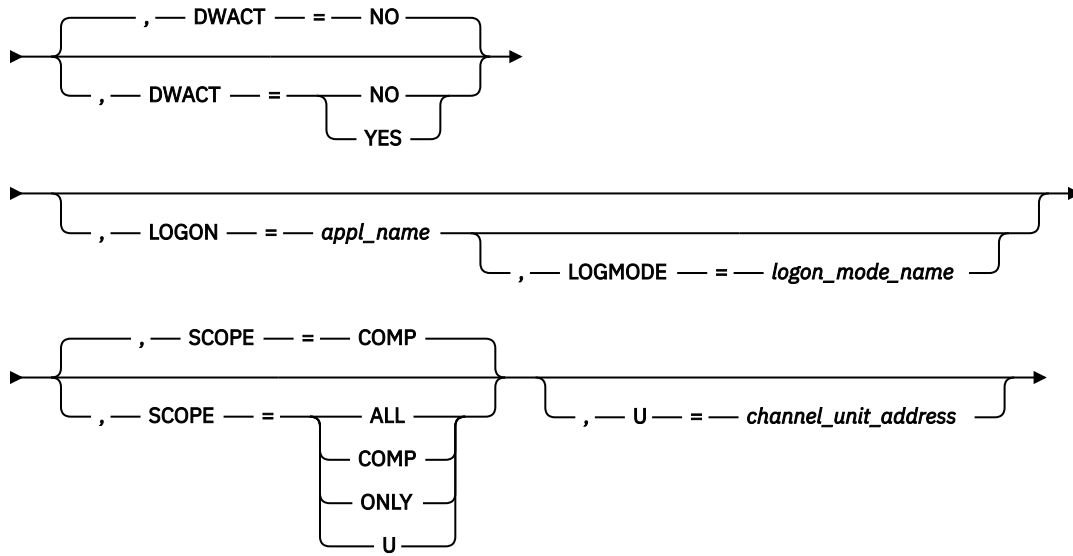

Activate a group under an Enterprise Extender XCA major node:

►► VARY — — NET — , — ACT — , — ID — = — *group_name* ►

Activate other resources:

►► VARY — — NET — , — ACT — , — ID — = — *name* →

1

Notes:

¹ The U operand is valid for a local SNA PU or a channel link.

Activate a model CDRSC and, optionally, all the clone CDRSCs created from it:

►► VARY — — NET — , — ACT — , — ID — = — *model_cdrsc_name* →

V ANS command

Enable active switched SDLC lines with dial-in capability to allow or disallow an incoming call from a physical unit defined in a switched major node:

►► VARY — — NET — , — ANS — = — OFF — , — ID — = — *line_name* →

V AUTOLOG command

Initiate automatic logon processing for resources that are defined with controlling applications:

► VARY — NET — , AUTOLOG — ID = * —
 , ID = controlling_appl

V CFS command

Connect or disconnect from a VTAM coupling facility structure:

VARY — **NET** , — **CFS** — , — **ACTION** — = **CONNECT** — , — **STRNAME** →
DISCONNECT
= — **ALL** —
structure name

V DIAL command

Establish a switched subarea connection, a switched connection to a type 1,2, or 2.1 device (adjacent link station), or a CPSVRMGR session between a dependent LU requester (DLUR) and a dependent LU server (DLUS):

► VARY — — NET — , — DIAL — , — ID — = — *resource_name* ►
 └──────────────────────────────────┘
 , — CPCP — = — YES —
 └──────────┘
 NO —

V DRDS command

Dynamically reconfigure a nonswitched peripheral node:

►► VARY — — NET — , — DRDS — , — ID — = — *dr_file_name* ◀◀

V HANGUP command

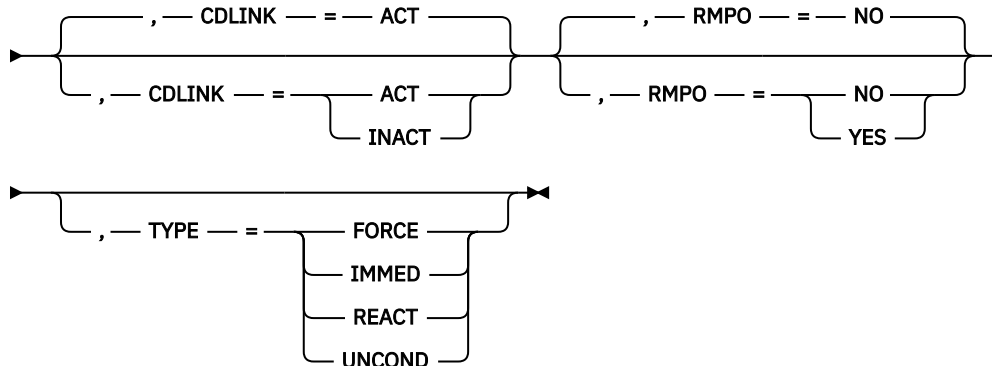

Take down a switched subarea connection or a switched connection to a type 1,2, or 2.1 device.

► VARY — — NET — , — HANGUP — , — ID — = — *link_station_name* ◄

V INACT command

Deactivate an NCP major node:

► VARY — — NET — , — INACT — , — ID — = — *nep_name* ►

Deactivate an NCP line:

► VARY — — NET — , — INACT — , — ID — = — *line_name* ►

Deactivate a CDRM major node:

► VARY — NET — , — INACT — , — ID — = — node_name

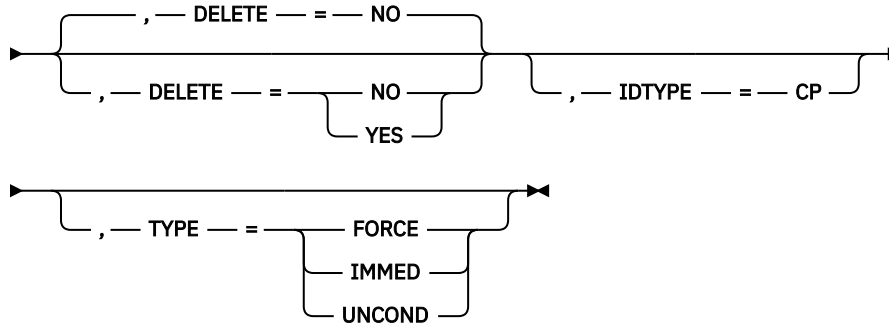

Deactivate a CDRM minor node:

► VARY — — NET — , — INACT — , — ID — = — *node_name* ►

Deactivate a CDRSC minor node:

►► VARY — — NET — , — INACT — , — ID — = — *node_name* →

Deactivate the dynamic XCF local SNA major node:

►► VARY — — NET — , — INACT — , — ID — = — ISTLSXCF →

Deactivate a dynamic XCF local SNA PU:

►► VARY — — NET — , — INACT — , — ID — = — *name* →

Deactivate a dynamic switched PU:

►► VARY — — NET — , — INACT — , — ID — = — *pu_name* →

Deactivate a dependent LU requester (DLUR):

►► VARY — — NET — , — INACT — , — ID — = — *dlur_name* ¹ ² →

Notes:

¹ Depending on the value of the VARYWLD start option, wildcard values can be used for this operand.

² Depending on the value of the GVBKDLY start option, GIVEBACK commands generated for DLURs using wildcard values might be paced by VTAM.

Deactivate a PU supported by a DLUR:

►► VARY — — NET — , — INACT — , — ID — = — *pu_name* →

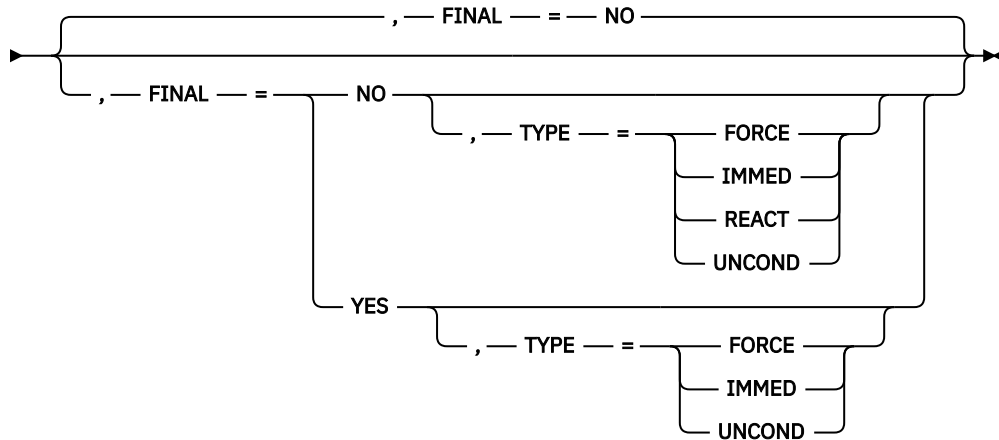

Deactivate RTP PUs:

►► VARY — — NET — , — INACT — , — ID — = — *rtp_pu_name* →

Deactivate other PUs:

►► VARY — — NET — , — INACT — , — ID — = — *pu_name* →

Deactivate a model application and all the APPLs created from it:

►► VARY — — NET — , — INACT — , — ID — = — *model_appl_name* →

Deactivate a group under an Enterprise Extender XCA major node:

►► VARY — — NET — , — INACT — , — ID — = — *group_name* →

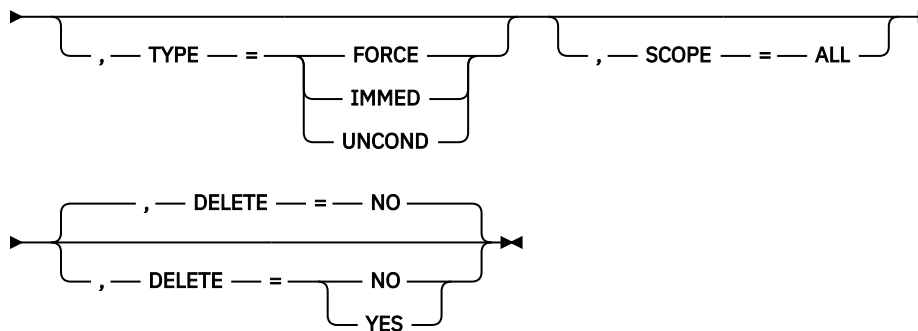

Deactivate other resources:

►► VARY — — NET — , — INACT — , — ID — = — *name* →

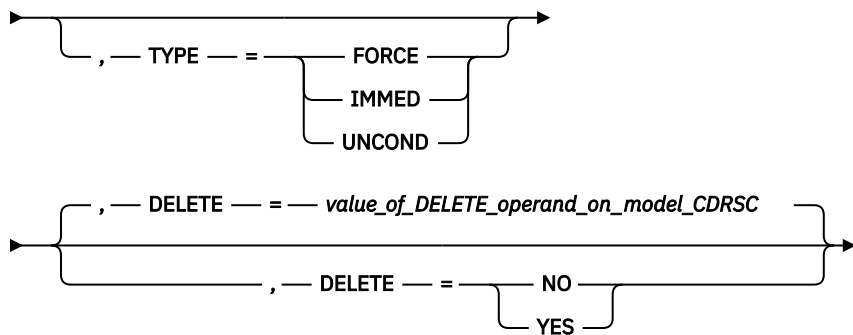

Deactivate a model CDRSC and, optionally, all the clone CDRSCs created from it:

►► VARY — — NET — , — INACT — , — ID — = — *model_cdrsc_name* →

Deactivate a clone CDRSC:

►► VARY — — NET — , — INACT — , — ID — = — *clone_cdrsc_name* →

V INOP command

Terminate a manual dial operation if the VTAM operator is unable to complete the call:

➤ VARY — — NET — , — INOP — , — ID — = — *line_name* ➔

V LOGON command

Create or change an automatic logon specification:

➤ VARY — — NET — , — LOGON — = — *appl_name* — , — ID — = — *slu_name* ➔

V NOLOGON command

Delete an existing automatic logon specification:

➤ VARY — — NET — , — NOLOGON — = — * — , — ID — = — *slu_name* ➔

V PATH command

Modify the availability of a dial-out path to a specific switched physical unit or a group of dial-out paths within a switched major node:

➤ VARY — — NET — , — PATH — = — NOUSE — ➔

V REL command

Release a PU:

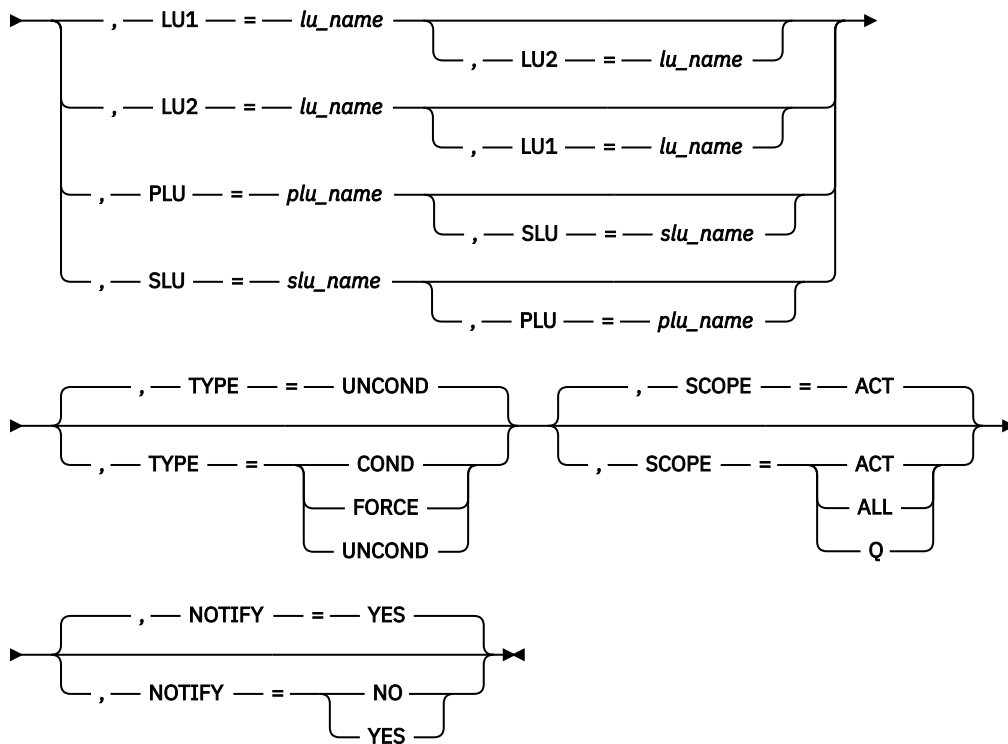

➤ VARY — — NET — , — REL — , — ID — = — *pu_name* ➔

V TERM command

VARY TERM command using name or name pair:

➤ VARY — — NET — , — TERM ➔

VARV TERM command using session ID:

➤ VARV — — NET — , — TERM — , — SID — = — *session_id* ➔

Start options

Start options are listed in this section alphabetically; however, you can code them in any order.

Precede the option list with three commas and enclose the group of options in parentheses.

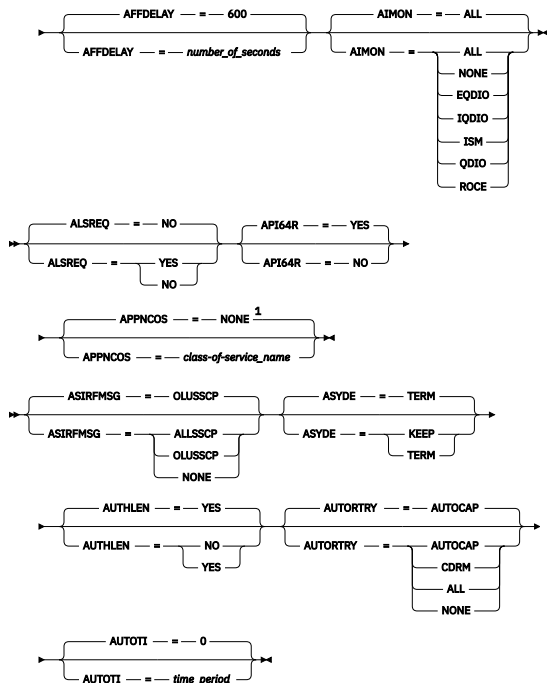

Start options that are entered on the START command must be separated by commas. Do not leave any blanks between options.

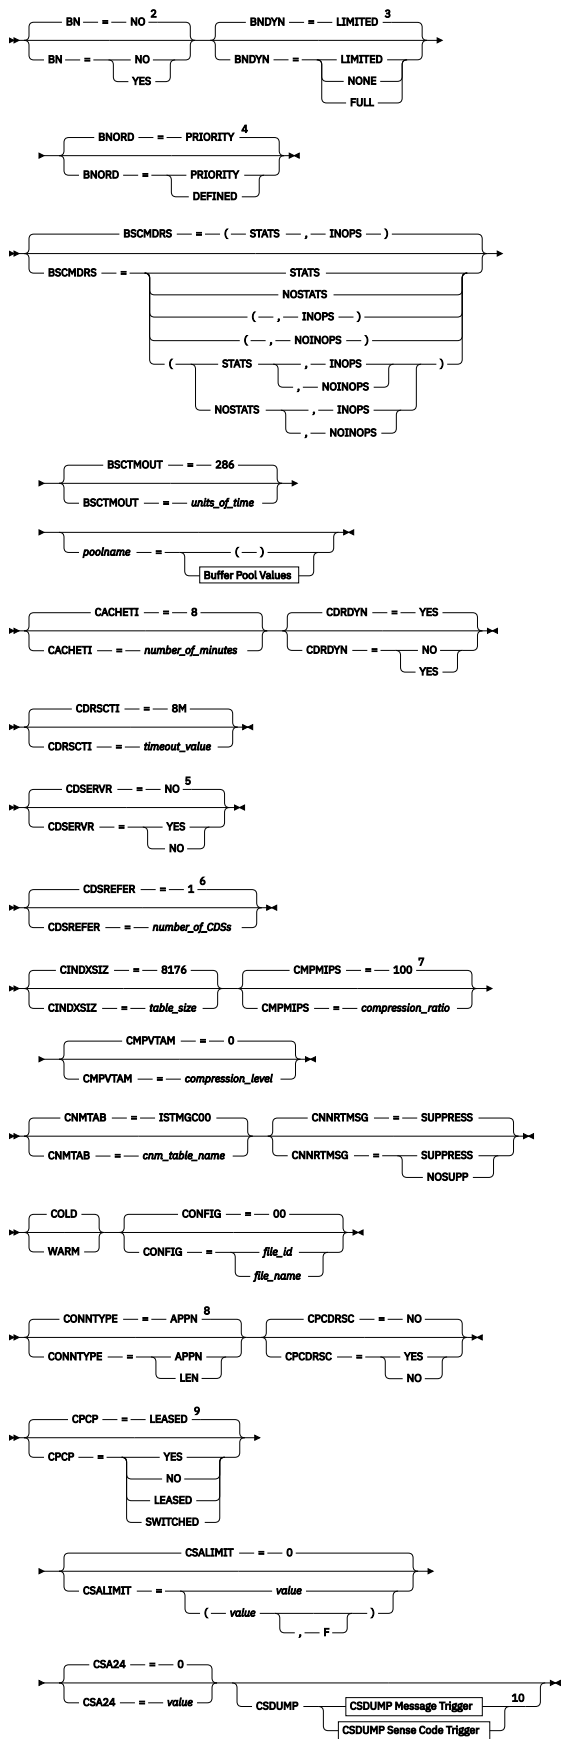

For more information on the START command, see [z/OS Communications Server: SNA Operation](#).

➤➤

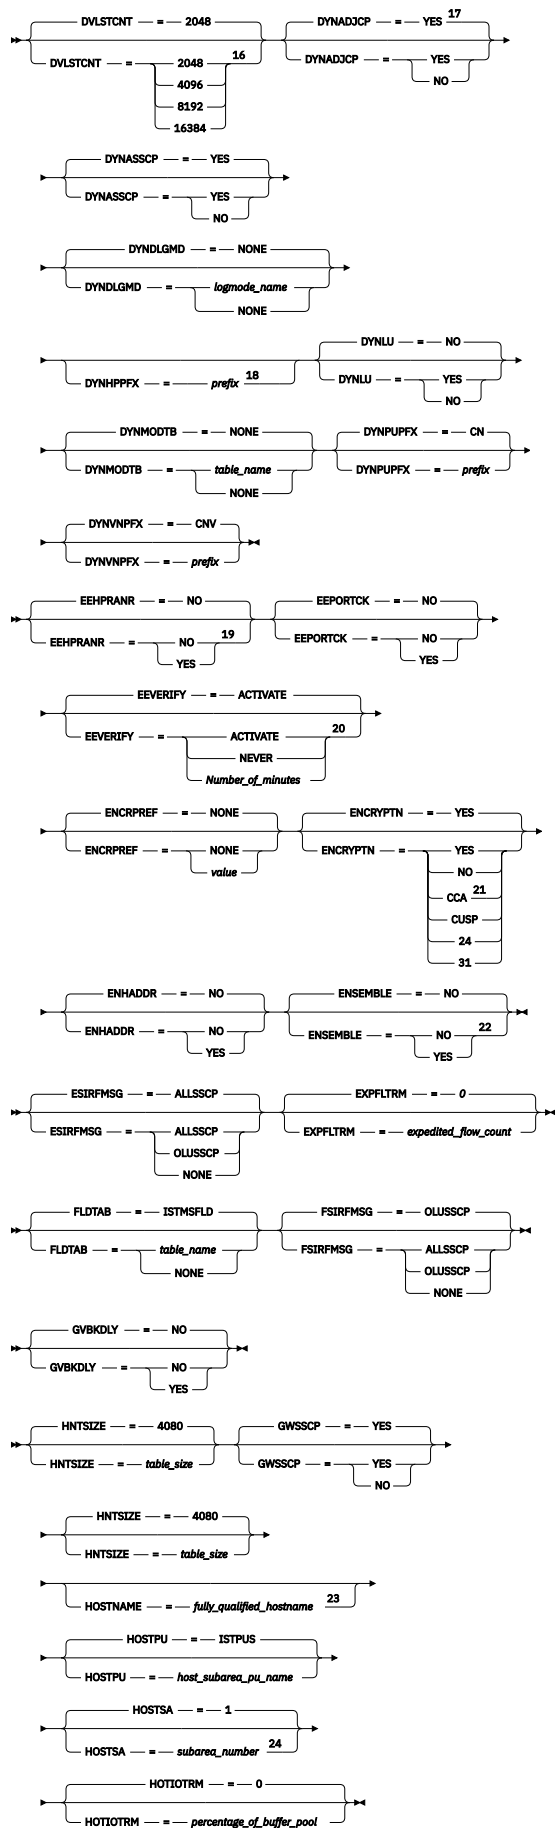

Options

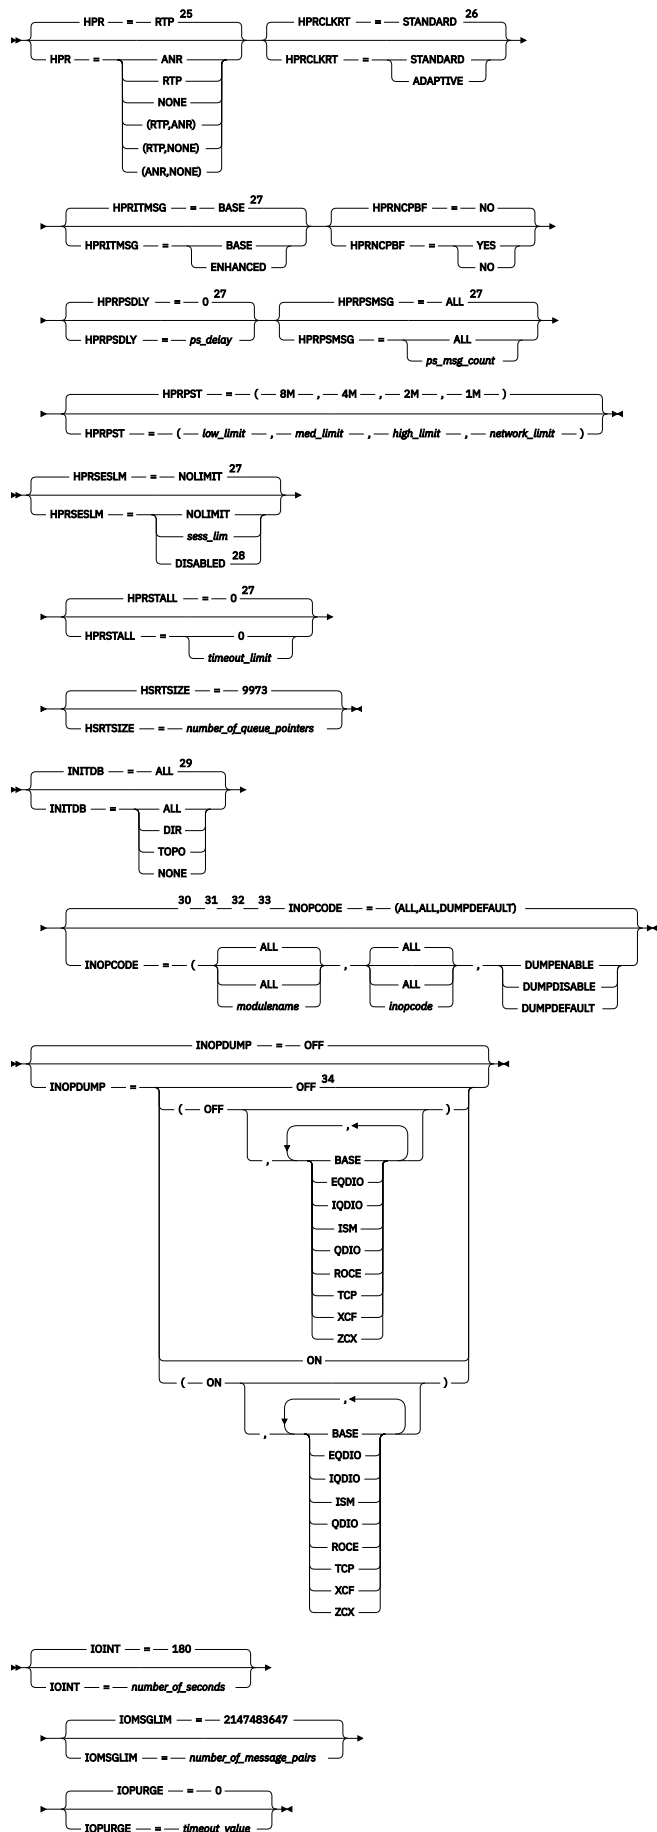

➤ NETID — — *network_id* — SSCPID — — *sscp_id* — SSCPNAME — — *name* ➔

Notes:

- ¹ APPNCOS is meaningful only if the NODETYPE start option is also used.
- ² BN is meaningful only if the NODETYPE=NN start option is also used.
- ³ BNDYN is meaningful only if the BN=YES start option is also used.
- ⁴ BNORD is meaningful only if the BN=YES start option is also used.
- ⁵ CDSERVER is meaningful only if the NODETYPE=NN start option is also used.
- ⁶ CDSREFER is meaningful only if the NODETYPE=NN and CDSERVER=NO start options are also used.
- ⁷ The CMPMIPS start option is meaningful only if the value for CMPVTAM is greater than 1.
- ⁸ CONNTYPE is meaningful only if the NODETYPE start option is also used.
- ⁹ CPCP is meaningful only if the NODETYPE start option is also used.
- ¹⁰ Specify the CSDUMP start option twice to set both message and sense code triggers.
- ¹¹ DIRSIZE is meaningful only if the NODETYPE=NN start option is also used.
- ¹² DIRTIME is meaningful only if the NODETYPE=NN start option is also used.
- ¹³ DLURSAW is meaningful only if the NODETYPE=NN start option is also used.
- ¹⁴ Because of the volume of messages that can be generated, it is not recommended that this option be enabled during normal operation. Instead, it is recommended that this option be enabled (using the MODIFY VTAMOPTS command) on all necessary hosts only when trying to diagnose specific problems. After the problem has been diagnosed or documentation has been collected, this option should be disabled once again (using the MODIFY VTAMOPTS command).
- ¹⁵ If the DSPLYMAX start option value is less than 100, that value is the default for DSPLYDEF.
- ¹⁶ Use the CFSIZER tool to determine the appropriate number of lists for your EZBDVIPA structure, as well as, the suggested INITSIZE and SIZE values for the structure. Before you modify the DVLSTCNT option to increase the number of lists requested for the EZBDVIPA structure, update your CFRM policy with the recommended INITSIZE and SIZE values. Increasing the number of lists requires more storage for the EZBDVIPA structure. Make sure the same DVLSTCNT value is configured in all VTAMs in the sysplex. To enable the modified DVLSTCNT value, issue the following SETXCF MVS command to rebuild the EZBDVIPA structure: **SETXCF START,REBUILD,STRNAME=EZBDVIPA**. See [SETXCF command in z/OS MVS System Commands](#) for more information.
- ¹⁷ DYNADJCP is meaningful only if the NODETYPE start option is also used.
- ¹⁸ Two character prefix.
- ¹⁹ EEHPRANR is meaningful only when the NODETYPE=NN start option is also used.
- ²⁰ The EEVERIFY start option is meaningful only if VTAM provides RTP-level HPR support. The NODETYPE start option must be coded and the RTP value must be specified on the HPR start option.
- ²¹ ENCRYPTN=CCA needs to be coded when Triple Des Encryption is required.
- ²² The ENSEMBLE setting is used to either permit or deny connectivity to the intraensemble data network and the intranode management network. It does this by either allowing or denying activation of OSX and OSM interfaces.
- ²³ HOSTNAME is meaningful only if the NODETYPE start option is also used. If neither HOSTNAME nor IPADDR is specified on any of the GROUP definition statements within the Enterprise Extender XCA major node, then either the HOSTNAME, TCPNAME, or IPADDR start options must be specified in order to activate an Enterprise Extender link. The HOSTNAME start option specifies the default hostname to be used for name-to-address resolution as part of activating an Enterprise Extender connection, and must resolve at this node to a static VIPA address associated with a TCP/IP stack at this node. If IPADDR is specified along with HOSTNAME on the START command, the IPADDR value is ignored.
- ²⁴ HOSTSA specifies the subarea number of this VTAM. If HOSTSA is not coded, then a default subarea number of 1 is used.
- ²⁵ HPR is meaningful only if NODETYPE is also used.
- ²⁶ HPRCLKRT=ADAPTIVE is meaningful only in Enterprise Extender configurations that have a defined capacity of 1 Gb (gigabit) or higher access speeds.
- ²⁷ This option is meaningful only if VTAM provides RTP-level HPR support.
- ²⁸ HPRSESLM=DISABLED is meaningful only on interchange nodes.
- ²⁹ INITDB is meaningful only if the NODETYPE=NN start option is also used.

³⁰ When specifying an InOpCode for the second parameter, always specify three digits by including any leading zeros.

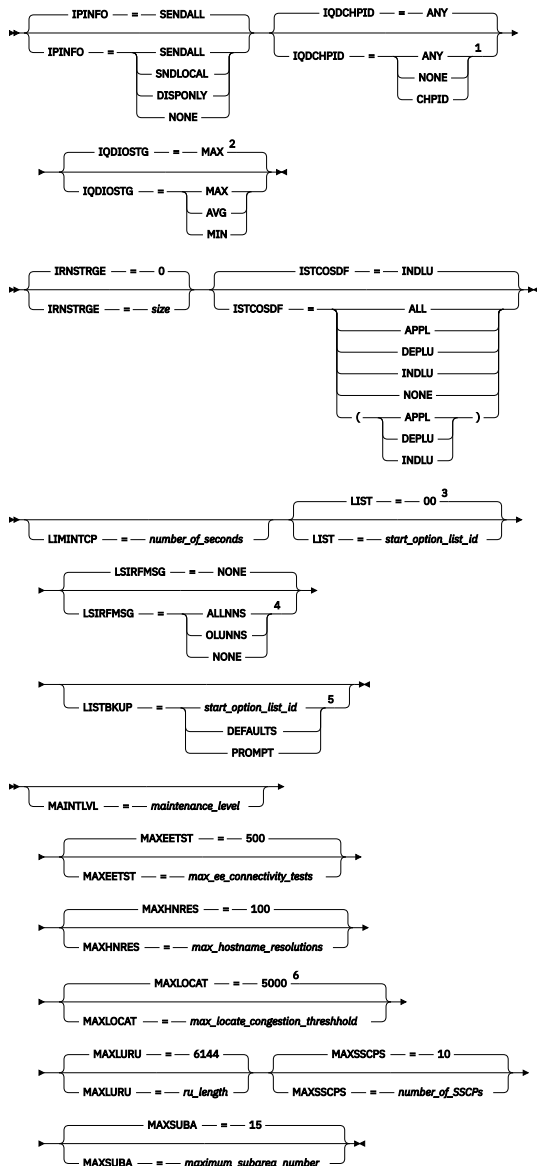

³¹ If an InOpCode is specified for the second parameter, the first parameter cannot be ALL.

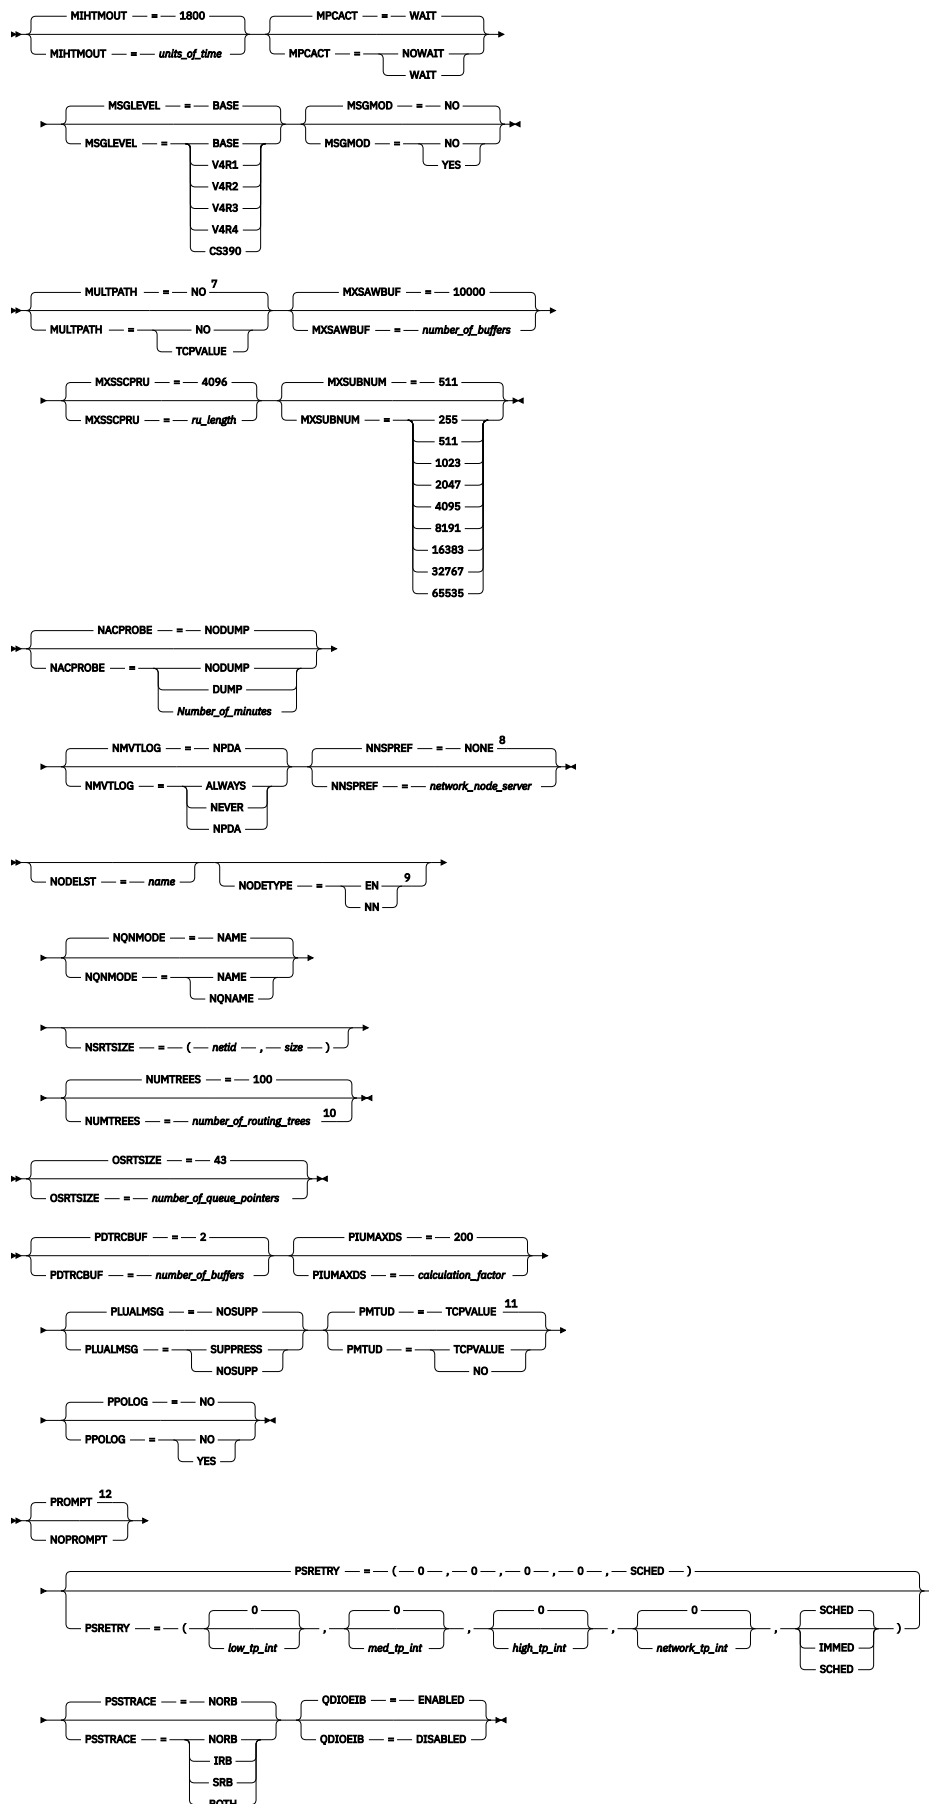

³² INOPCODE has no effect unless INOPDUMP is active for the resource when an inoperative condition is detected. See the MODIFY INOPCODE command in [z/OS Communications Server: SNA Operation](#) for more details.

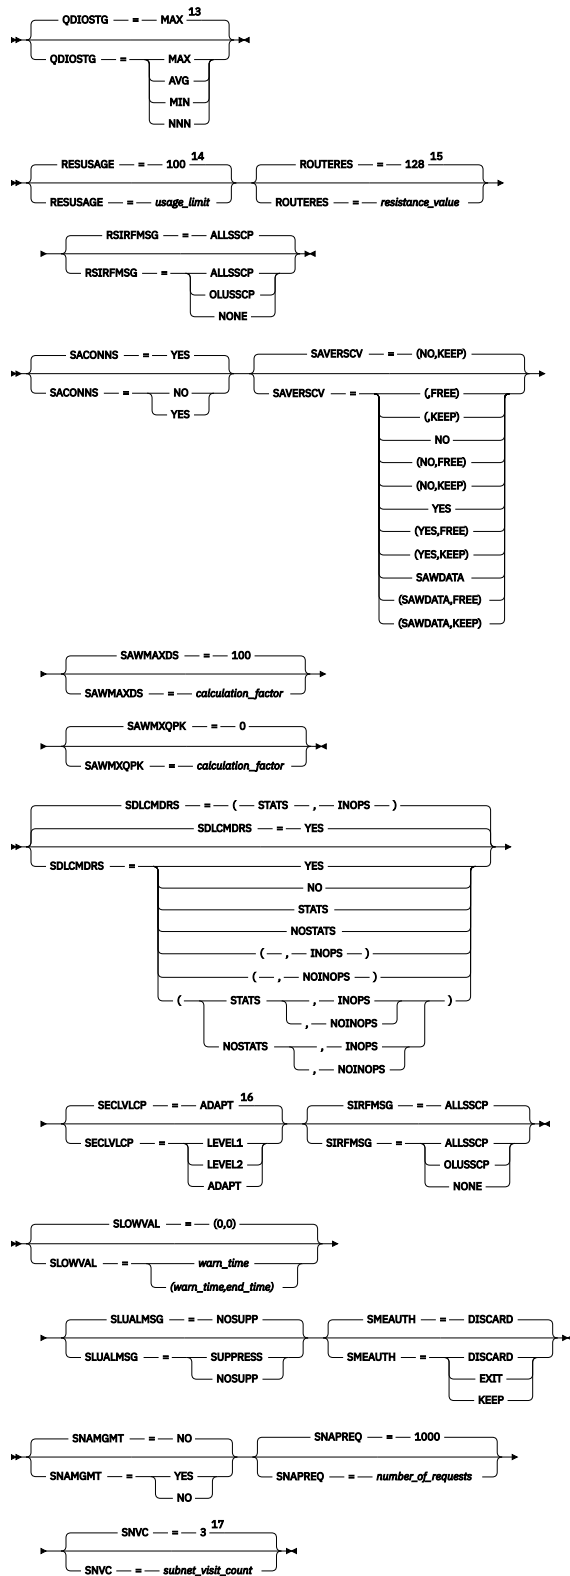

³³ Multiple INOPCODE parameters can be specified by the START command, and will be processed left to right as they are entered. This is different from specifying the INOPCODE parameter on either the MODIFY INOPCODE command or the MODIFY VTAMOPTS command, where only one INOPCODE parameter is allowed for each entry of these commands.

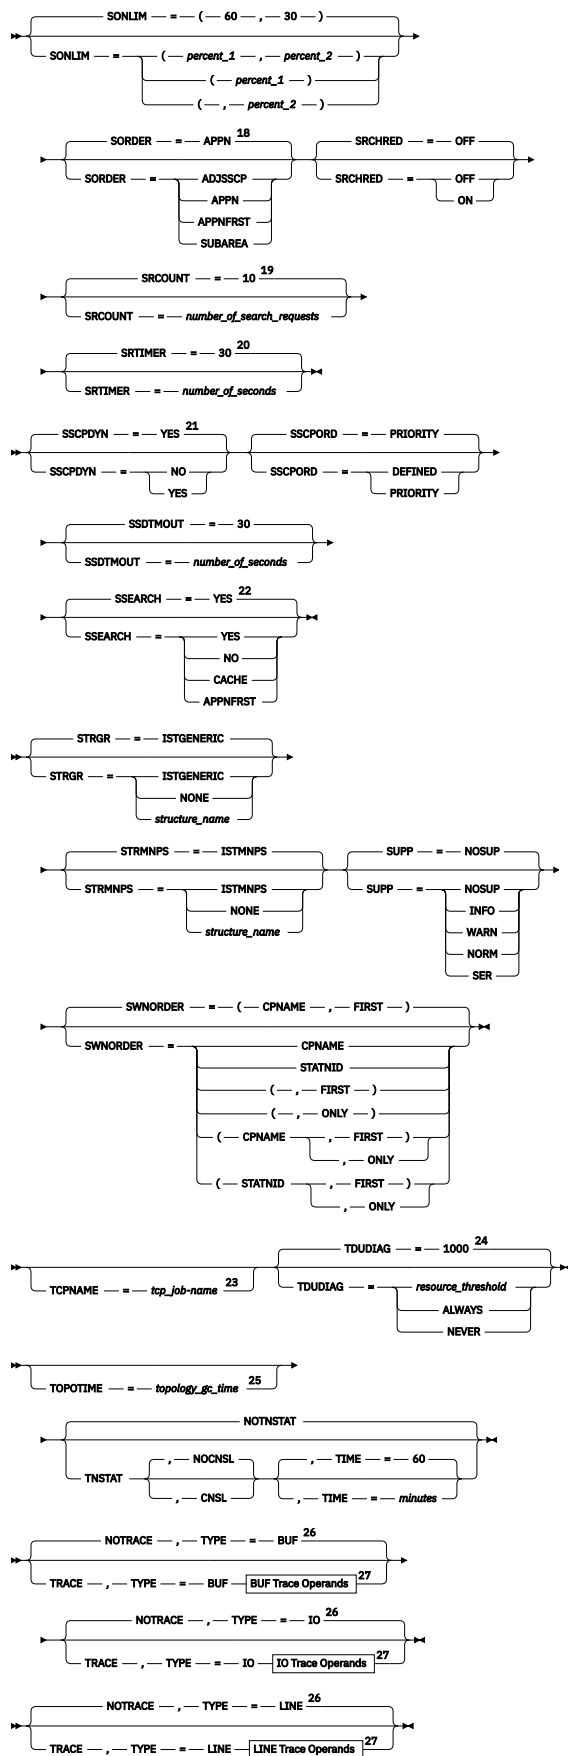

³⁴ INOPDUMP status is propagated to resources that are defined within a TRLE when the entry is activated.

³⁵ IPADDR is meaningful only if the NODETYPE start option is also used. If neither IPADDR nor HOSTNAME is specified on any of the GROUP definition statements within the Enterprise Extender XCA major node, then either the HOSTNAME, TCPNAME, or IPADDR start option must be specified in order to activate an Enterprise Extender link. The IPADDR start option specifies the default IPv4 or IPv6 static VIPA address to be used when activating an Enterprise Extender connection. If HOSTNAME is specified along with IPADDR on the START command, the IPADDR value is ignored.

Notes:

¹ The IQDCHPID option controls which IQD CHPID (and related subchannel devices) VTAM selects to dynamically build the IQDIO (IUTIQDIO) MPC group. The IUTIQDIO MPC group is used for TCP/IP dynamic XCF communications within System z. Although this option can be modified (and the modification will immediately be displayed) while the IUTIQDIO MPC group is currently active, any modifications have the effects shown in the section called IQD CHPID modifications in [z/OS Communications Server: SNA Operation](#).

² This option affects only IQDIO devices that use a MFS of 64k. The smaller frame sizes will always use 126 SBALs. You can override this option on a per-device basis using the READSTORAGE parameter on the LINK or INTERFACE statement in the TCP/IP profile. See [z/OS Communications Server: IP Configuration Reference](#) for more details.

³ LIST can be entered by a VTAM operator only. If LIST is coded in an ATCSTRxx file, it is considered to be an error and is ignored.

⁴ Because of the volume of messages that can be generated, it is not recommended that this option be enabled during normal operation. Instead, it is recommended that this option be enabled (using the MODIFY VTAMOPTS command) on all necessary hosts only when trying to diagnose specific problems. After the problem has been diagnosed or documentation has been collected, this option should be disabled once again (using the MODIFY VTAMOPTS command).

⁵ LISTBKUP can be coded only in a start option file. If you enter it on the START command or at an operator prompt, VTAM will ignore it.

⁶ MAXLOCAT is meaningful only if NODETYPE is specified.

⁷ MULTIPATH is meaningful only if the NODETYPE start option is also specified.

⁸ NNSPREF can be specified only if NODETYPE=EN is specified during VTAM START processing.

⁹ NODETYPE enables APPN function. The combination of HOSTSA, NODETYPE, and SACONNS determines the configuration (subarea node, interchange node, migration data host, network node, or end node).

¹⁰ NUMTREES is meaningful only if the NODETYPE=NN start option is also used.

¹¹ PMTUD is meaningful only if the NODETYPE start option is also specified.

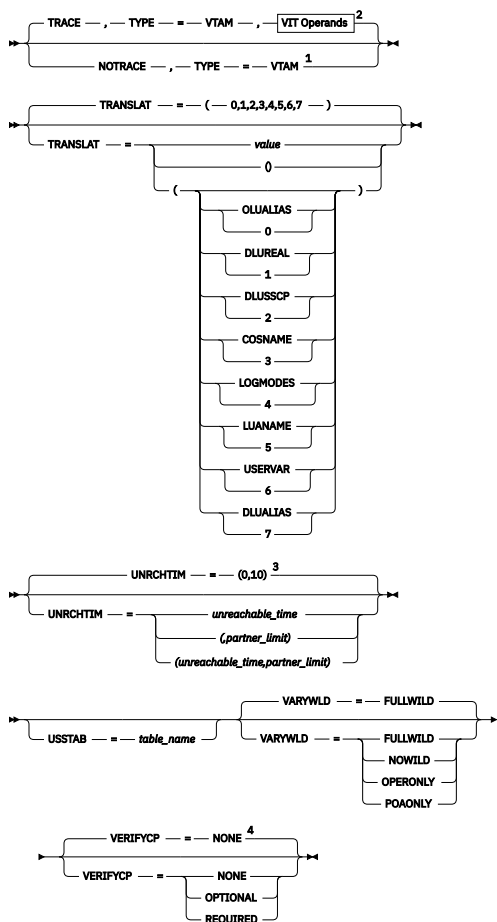

¹² A VTAM operator cannot enter the PROMPT or NOPROMPT start option; it can be coded only in ATCSTR00. The value coded in ATCSTR00 is ignored if start options are entered on the START command or if VTAM finds an error in a start list. Upon finding an error in a start list, VTAM prompts the operator so that the operator can specify the option correctly.

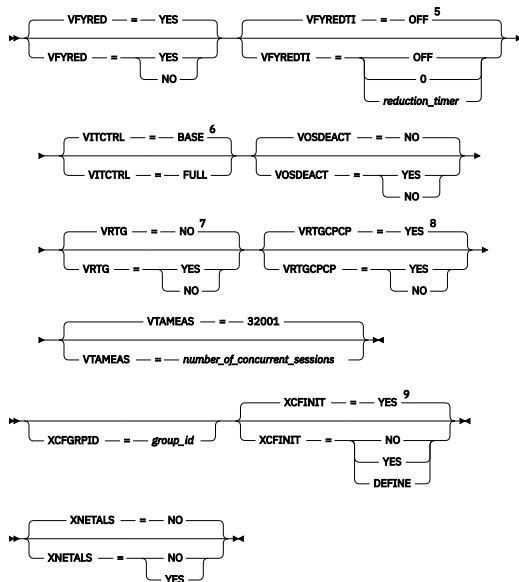

¹³ QDIOSTG defaults to MAX. To understand the meaning of the various keywords on QDIOSTG, see QDIOSTG start option in [z/OS Communications Server: SNA Resource Definition Reference](#). To see the amount of read storage being used for a specific QDIO *datapath* device, or EQDIO device, use the **DISPLAY TRL, TRLE** command. You can override the QDIOSTG value on a per-device basis using the READSTORAGE parameter on the LINK or INTERFACE statement in the TCP/IP profile. See [z/OS Communications Server: IP Configuration Reference](#) for more details.

¹⁴ RESUSAGE is meaningful only if the NODETYPE=NN start option is also used.

¹⁵ ROUTERES is meaningful only if the NODETYPE=NN start option is also used.

- 16 The SECLVLCP start option is meaningful only if the NODETYPE and VERIFYCP start options are also used.
- 17 SNVC is meaningful only if the BN=YES start option is also used.
- 18 SORDER is meaningful only in an interchange node or a migration data host.
- 19 SRCOUNT is meaningful only if the SRCHRED=ON start option is also used.
- 20 SRTIMER is meaningful only if the SRCHRED=ON start option is also used.
- 21 The SSCPDYN start option applies only for interconnected networks (that is, GWSSCP=YES is used).
- 22 SSEARCH is meaningful only if the NODETYPE=NN start option is also used.
- 23 TCPNAME is meaningful only if the NODETYPE start option is also used. If neither IPADDR nor HOSTNAME is specified on any of the GROUP definition statements within the Enterprise Extender XCA major node, then either the HOSTNAME, TCPNAME, or IPADDR start options must be specified in order to activate an Enterprise Extender link.
- 24 TDUDIAG is meaningful only if the NODETYPE=NN start option is also available.
- 25 TOPOTIME is meaningful only if the NODETYPE start option is also used.
- 26 Do not use NOTRACE when starting VTAM, except to override a TRACE start option coded in a predefined list.
- 27 You can code TRACE and its qualifiers through position 71, even if you are in the middle of the start option. Continue the remainder of the item in the next record. Code the TYPE qualifier immediately after you code the TRACE start option.

MODULE Trace Operands

QDIOSYNC trace operands

SIT Trace Operands

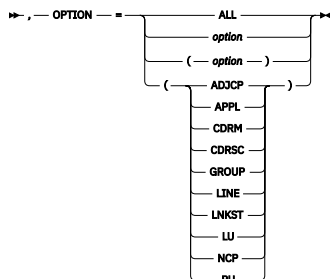

STATE Trace Operands

Operands used with ID

OPTION Operand

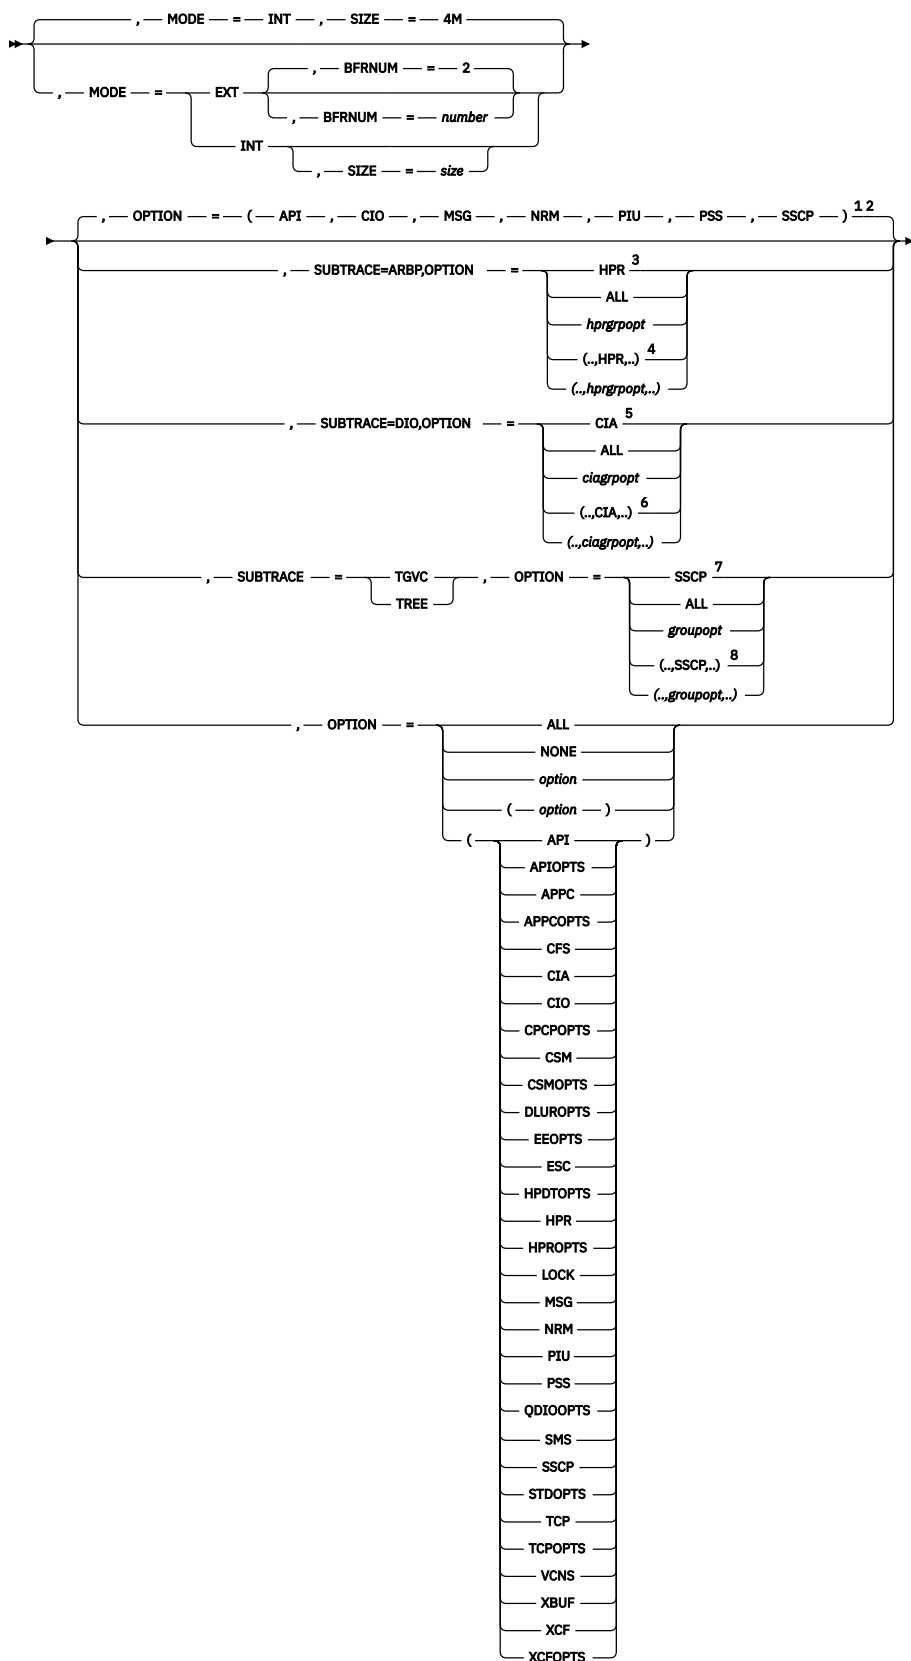

Notes:

¹ NOTRACE,TYPE=VTAM is accepted but ignored. Tracing is started with the default trace table size and the default options. The NOTRACE,TYPE=VTAM start option processing is affected by the level of VIT control being used (as specified by the VITCTRL start option). See [z/OS Communications Server: SNA Diagnosis Vol 2, FFST Dumps and the VIT](#) for details.

- ² You can code TRACE and its qualifiers through position 71, even if you are in the middle of the start option. Continue the remainder of the item in the next record. Code the TYPE qualifier immediately after you code the TRACE start option.
- ³ UNRCHTIM is meaningful only if the NODETYPE start option is also used.
- ⁴ The VERIFYCP start option is meaningful only if the NODETYPE start option is also used.
- ⁵ VFYREDTI is meaningful only if the NODETYPE=NN start option is also used.
- ⁶ VITCTRL start option will only affect the TRACE or NOTRACE start option if it is specified prior to the TRACE or NOTRACE TYPE=VTAM (MODE=INT) start option.
- ⁷ VRTG is meaningful only if the NODETYPE and HOSTSA start options are also used.
- ⁸ VRTGCPCP is meaningful only if the NODETYPE and HOSTSA start options are also used.
- ⁹ XCFINIT=YES is the default if VTAM is started as an APPN node (that is, the NODETYPE start option has been specified). XCFINIT=YES is not valid for pure subarea nodes. XCFINIT=DEFINE is the default if VTAM is started as a pure subarea node (the NODETYPE start option has not been specified).
- ¹⁰ When the same parameter is entered multiple times on a CSDUMP message trigger, only the last occurrence is accepted.
- ¹¹ MSGVALUE is valid only when the MESSAGE operand is used and specifies either message IST2391I, IST2406I or IST2419I.
- ¹² When an error message is received on any parameter of the CSDUMP start option, the remaining parameters for this CSDUMP start option are ignored. Enter the complete CSDUMP start option again when you are prompted.
- ¹³ When the same parameter is entered multiple times on a CSDUMP sense trigger, only the last occurrence is accepted.
- ¹⁴ COUNT applies only to the IBM 3720 and 3745 Communication Controllers.

VIT Operands

Notes:

- ¹ The default options apply only to `MODE=INT`.
- ² `PSS` is a default VIT option, but `PSS` can be turned off.

³ When you specify SUBTRACE=ARBP and you code a single OPTION value, the OPTION value must be HPR, ALL, or one of the group options (*hprgrpopt*) that include HPR as an individual option equivalent. The applicable group options are DLUROPTS, EEOPTS, HPDТОPTS, HPROPTS, QDIOOPTS, and XCFOPTS.

⁴ When SUBTRACE=ARBP is coded and you code multiple trace options in parentheses, you must code either HPR or one of the group options (*hprgrpopt*) that include HPR as an individual option equivalent inside the parentheses.

⁵ When you specify SUBTRACE=DIO and you code a single OPTION value, the OPTION value must be CIA, ALL, or one of the group options (*ciagrpopt*) that include CIA as an individual option equivalent. The applicable group options are EEOPTS, HPDТОPTS, HPROPTS, QDIOOPTS, TCPOPTS and XCFOPTS.

⁶ When SUBTRACE=DIO is coded and you code multiple trace options in parentheses, you must code either CIA or one of the group options (*ciagrpopt*) that include CIA as an individual option equivalent inside the parentheses.

⁷ When you code SUBTRACE=ТGVC or SUBTRACE=TREE and you code a single OPTION value, the OPTION value must be either SSCP, ALL, or one of the group options (*groupopt*), all of which include SSCP as an individual option equivalent. The group options are APIOPTS, APPCOPTS, CPCOPTS, CSМOPTS, DLUROPTS, EEOPTS, HPDТОPTS, HPROPTS, QDIOOPTS, STDОPTS, TCPOPTS, and XCFOPTS.

⁸ When you code SUBTRACE=ТGVC or SUBTRACE=TREE and you code multiple trace options in parentheses, you must code either SSCP or one of the group options (*groupopt*) inside the parentheses.

Other VTAM codes and commands

Table 2. Other VTAM codes and commands	
Command type	Reference
Status codes	See z/OS Communications Server: IP and SNA Codes .
Dump analysis tool commands	See z/OS Communications Server: SNA Diagnosis Vol 1, Techniques and Procedures .

Appendix A. Accessibility

Accessible publications for this product are offered through [IBM Documentation for z/OS](#).

If you experience difficulty with the accessibility of any z/OS documentation see [How to Send Feedback to IBM](#) to leave documentation feedback.

Notices

This information was developed for products and services that are offered in the USA or elsewhere.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not grant you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing IBM Corporation North Castle Drive, MD-NC119 Armonk, NY 10504-1785 United States of America

For license inquiries regarding double-byte character set (DBCS) information, contact the IBM Intellectual Property Department in your country or send inquiries, in writing, to:

Intellectual Property Licensing Legal and Intellectual Property Law IBM Japan Ltd. 19-21, Nihonbashi-Hakozakicho, Chuo-ku Tokyo 103-8510, Japan

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law: INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

This information could include missing, incorrect, or broken hyperlinks. Hyperlinks are maintained in only the HTML plug-in output for the IBM Documentation. Use of hyperlinks in other output formats of this information is at your own risk.

Any references in this information to non-IBM websites are provided for convenience only and do not in any manner serve as an endorsement of those websites. The materials at those websites are not part of the materials for this IBM product and use of those websites is at your own risk.

IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

IBM Corporation Site Counsel 2455 South Road Poughkeepsie, NY 12601-5400 USA

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this document and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurements may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrate programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. The sample programs are provided "AS IS", without warranty of any kind. IBM shall not be liable for any damages arising out of your use of the sample programs.

Terms and conditions for product documentation

Permissions for the use of these publications are granted subject to the following terms and conditions.

Applicability

These terms and conditions are in addition to any terms of use for the IBM website.

Personal use

You may reproduce these publications for your personal, noncommercial use provided that all proprietary notices are preserved. You may not distribute, display or make derivative work of these publications, or any portion thereof, without the express consent of IBM.

Commercial use

You may reproduce, distribute and display these publications solely within your enterprise provided that all proprietary notices are preserved. You may not make derivative works of these publications, or reproduce, distribute or display these publications or any portion thereof outside your enterprise, without the express consent of IBM.

Rights

Except as expressly granted in this permission, no other permissions, licenses or rights are granted, either express or implied, to the publications or any information, data, software or other intellectual property contained therein.

IBM reserves the right to withdraw the permissions granted herein whenever, in its discretion, the use of the publications is detrimental to its interest or, as determined by IBM, the above instructions are not being properly followed.

You may not download, export or re-export this information except in full compliance with all applicable laws and regulations, including all United States export laws and regulations.

IBM MAKES NO GUARANTEE ABOUT THE CONTENT OF THESE PUBLICATIONS. THE PUBLICATIONS ARE PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY, NON-INFRINGEMENT, AND FITNESS FOR A PARTICULAR PURPOSE.

IBM Online Privacy Statement

IBM Software products, including software as a service solutions, ("Software Offerings") may use cookies or other technologies to collect product usage information, to help improve the end user experience, to tailor interactions with the end user, or for other purposes. In many cases no personally identifiable information is collected by the Software Offerings. Some of our Software Offerings can help enable you to collect personally identifiable information. If this Software Offering uses cookies to collect personally identifiable information, specific information about this offering's use of cookies is set forth below.

Depending upon the configurations deployed, this Software Offering may use session cookies that collect each user's name, email address, phone number, or other personally identifiable information for purposes of enhanced user usability and single sign-on configuration. These cookies can be disabled, but disabling them will also eliminate the functionality they enable.

If the configurations deployed for this Software Offering provide you as customer the ability to collect personally identifiable information from end users via cookies and other technologies, you should seek your own legal advice about any laws applicable to such data collection, including any requirements for notice and consent.

For more information about the use of various technologies, including cookies, for these purposes, see IBM's Privacy Policy at ibm.com/privacy and IBM's Online Privacy Statement at ibm.com/privacy/details in the section entitled "Cookies, Web Beacons and Other Technologies," and the "IBM Software Products and Software-as-a-Service Privacy Statement" at ibm.com/software/info/product-privacy.

Policy for unsupported hardware

Various z/OS elements, such as DFSMS, JES2, JES3, and MVS, contain code that supports specific hardware servers or devices. In some cases, this device-related element support remains in the product even after the hardware devices pass their announced End of Service date. z/OS may continue to service element code; however, it will not provide service related to unsupported hardware devices. Software problems related to these devices will not be accepted for service, and current service activity will cease if a problem is determined to be associated with out-of-support devices. In such cases, fixes will not be issued.

Minimum supported hardware

The minimum supported hardware for z/OS releases identified in z/OS announcements can subsequently change when service for particular servers or devices is withdrawn. Likewise, the levels of other software products supported on a particular release of z/OS are subject to the service support lifecycle of those products. Therefore, z/OS and its product publications (for example, panels, samples, messages, and product documentation) can include references to hardware and software that is no longer supported.

- For information about software support lifecycle, see: [IBM Lifecycle Support for z/OS \(www.ibm.com/software/support/systemsz/lifecycle\)](http://www.ibm.com/software/support/systemsz/lifecycle)
- For information about currently-supported IBM hardware, contact your IBM representative.

Policy for unsupported hardware

Various z/OS elements, such as DFSMS, HCD, JES2, JES3, and MVS, contain code that supports specific hardware servers or devices. In some cases, this device-related element support remains in the product even after the hardware devices pass their announced End of Service date. z/OS may continue to service element code; however, it will not provide service related to unsupported hardware devices. Software problems related to these devices will not be accepted for service, and current service activity will cease if a problem is determined to be associated with out-of-support devices. In such cases, fixes will not be issued.
